

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 0

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 0, variable  
name: position sibling order: 0

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 1

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 1, variable  
name: position sibling order: 1

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 2

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 2, variable  
name: position sibling order: 2

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 3

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 3, variable  
name: position sibling order: 3

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 4

test for model 4 optimal fitness target

target: 0.05, variable name: size sibling order: 4, variable  
name: position sibling order: 4

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 0

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 0, variable  
name: position sibling order: 0

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 1

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 1, variable  
name: position sibling order: 1

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 2

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 2, variable  
name: position sibling order: 2

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 3

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 3, variable  
name: position sibling order: 3

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 4

test for model 4 optimal fitness target

target: 0.1, variable name: size sibling order: 4, variable  
name: position sibling order: 4

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 0

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 0, variable  
name: position sibling order: 0

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 1

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 1, variable  
name: position sibling order: 1

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 2

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 2, variable  
name: position sibling order: 2

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 3

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 3, variable  
name: position sibling order: 3

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 4

test for model 4 optimal fitness target

target: 0.15, variable name: size sibling order: 4, variable  
name: position sibling order: 4

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 0

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 0, variable  
name: position sibling order: 0

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 1

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 1, variable  
name: position sibling order: 1

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 2

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 2, variable  
name: position sibling order: 2

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 3

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 3, variable  
name: position sibling order: 3

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 4

test for model 4 optimal fitness target

target: 0.2, variable name: size sibling order: 4, variable  
name: position sibling order: 4

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 0

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 0, variable  
name: position sibling order: 0

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 1

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 1, variable  
name: position sibling order: 1

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 2

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 2, variable  
name: position sibling order: 2

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 3

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 3, variable  
name: position sibling order: 3

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 4

test for model 4 optimal fitness target

target: 0.25, variable name: size sibling order: 4, variable  
name: position sibling order: 4
