

test for number of components in gmm , variable name:  
position sibling order: 0

test for number of components in gmm , variable name:  
position sibling order: 1

test for number of components in gmm , variable name:  
position sibling order: 2

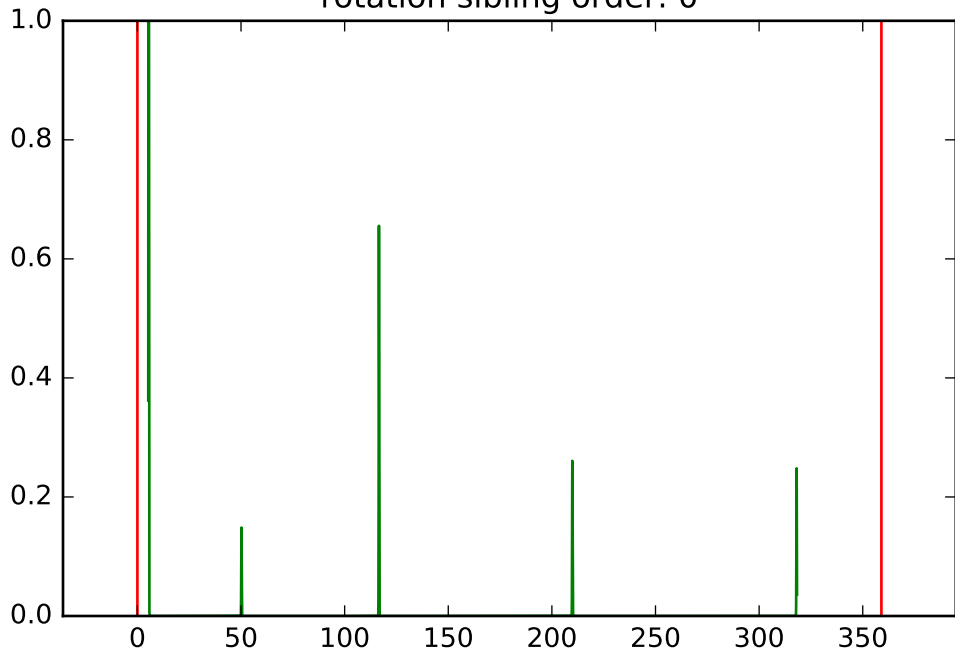

test for number of components in gmm , variable name:  
position sibling order: 3

test for number of components in gmm , variable name:  
position sibling order: 4

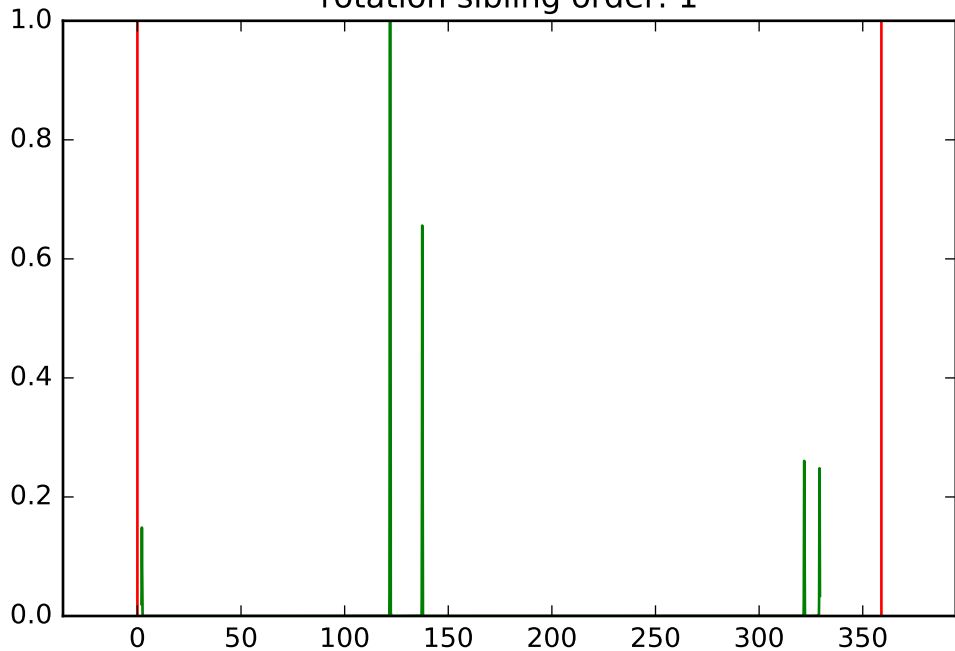

test for number of components in gmm , variable name:  
rotation sibling order: 0

rotation sibling order: 0, variable name: position sibling  
order: 0

test for number of components in gmm , variable name:  
rotation sibling order: 1

rotation sibling order: 1, variable name: position sibling  
order: 1

test for number of components in gmm , variable name:  
rotation sibling order: 2

rotation sibling order: 2, variable name: position sibling  
order: 2

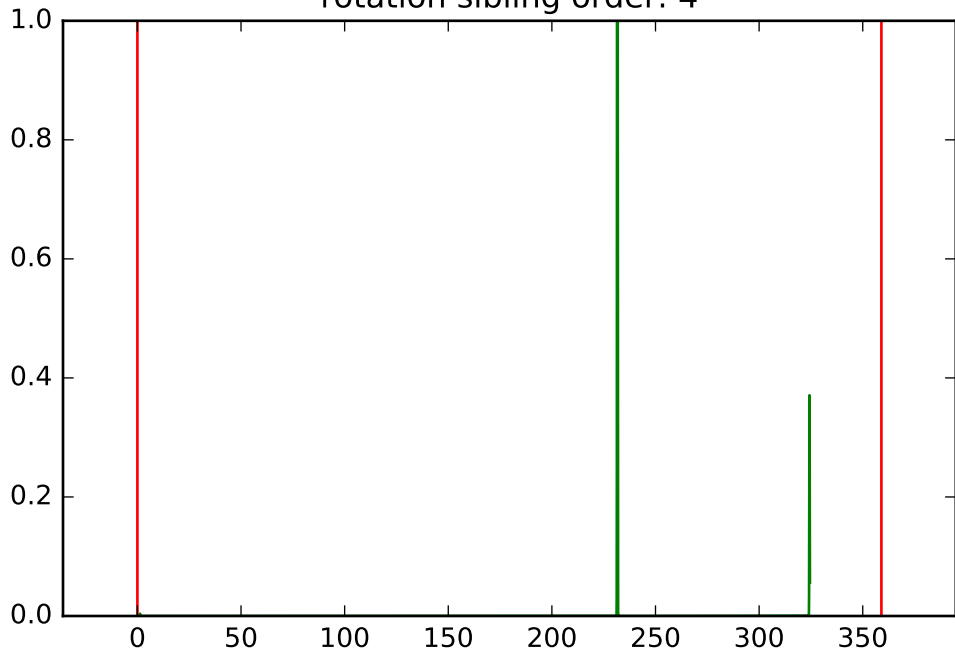

test for number of components in gmm , variable name:  
rotation sibling order: 3

rotation sibling order: 3, variable name: position sibling  
order: 3

test for number of components in gmm , variable name:  
rotation sibling order: 4

rotation sibling order: 4, variable name: position sibling  
order: 4

test for number of components in gmm , variable name: size  
sibling order: 0

test for number of components in gmm , variable name: size  
sibling order: 0, variable name: position sibling order: 0

test for number of components in gmm , variable name: size  
sibling order: 1

test for number of components in gmm , variable name: size  
sibling order: 1, variable name: position sibling order: 1

test for number of components in gmm , variable name: size  
sibling order: 2

test for number of components in gmm , variable name: size  
sibling order: 2, variable name: position sibling order: 2

test for number of components in gmm , variable name: size  
sibling order: 3

test for number of components in gmm , variable name: size  
sibling order: 3, variable name: position sibling order: 3

test for number of components in gmm , variable name: size  
sibling order: 4

test for number of components in gmm , variable name: size  
sibling order: 4, variable name: position sibling order: 4

test for number of components in gmm , variable name: size  
sibling order: 0

test for number of components in gmm , variable name: size  
sibling order: 0, variable name: position sibling order: 0

test for number of components in gmm , variable name: size  
sibling order: 1

test for number of components in gmm , variable name: size  
sibling order: 1, variable name: position sibling order: 1

test for number of components in gmm , variable name: size  
sibling order: 2

test for number of components in gmm , variable name: size  
sibling order: 2, variable name: position sibling order: 2

test for number of components in gmm , variable name: size  
sibling order: 3

test for number of components in gmm , variable name: size  
sibling order: 3, variable name: position sibling order: 3

test for number of components in gmm , variable name: size  
sibling order: 4

test for number of components in gmm , variable name: size  
sibling order: 4, variable name: position sibling order: 4

test for number of components in gmm , variable name:  
position sibling order: 0

test for number of components in gmm , variable name:  
position sibling order: 1

test for number of components in gmm , variable name:  
position sibling order: 2

test for number of components in gmm , variable name:  
position sibling order: 3

test for number of components in gmm , variable name:  
position sibling order: 4

test for number of components in gmm , variable name:  
position sibling order: 0

test for number of components in gmm , variable name:  
position sibling order: 1

test for number of components in gmm , variable name:  
position sibling order: 2

test for number of components in gmm , variable name:  
position sibling order: 3

test for number of components in gmm , variable name:  
position sibling order: 4

test for number of components in gmm , variable name:  
rotation sibling order: 0

rotation sibling order: 0, variable name: position sibling  
order: 0

test for number of components in gmm , variable name:  
rotation sibling order: 1

rotation sibling order: 1, variable name: position sibling  
order: 1

test for number of components in gmm , variable name:  
rotation sibling order: 2

rotation sibling order: 2, variable name: position sibling  
order: 2

test for number of components in gmm , variable name:  
rotation sibling order: 3

rotation sibling order: 3, variable name: position sibling  
order: 3

test for number of components in gmm , variable name:  
rotation sibling order: 4

rotation sibling order: 4, variable name: position sibling  
order: 4

test for number of components in gmm , variable name: size  
sibling order: 0

test for number of components in gmm , variable name: size  
sibling order: 0, variable name: position sibling order: 0

test for number of components in gmm , variable name: size  
sibling order: 1

test for number of components in gmm , variable name: size  
sibling order: 1, variable name: position sibling order: 1

test for number of components in gmm , variable name: size  
sibling order: 2

test for number of components in gmm , variable name: size  
sibling order: 2, variable name: position sibling order: 2

test for number of components in gmm , variable name: size  
sibling order: 3

test for number of components in gmm , variable name: size  
sibling order: 3, variable name: position sibling order: 3

test for number of components in gmm , variable name: size
