

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_0, variable
name: position sibling order: 0

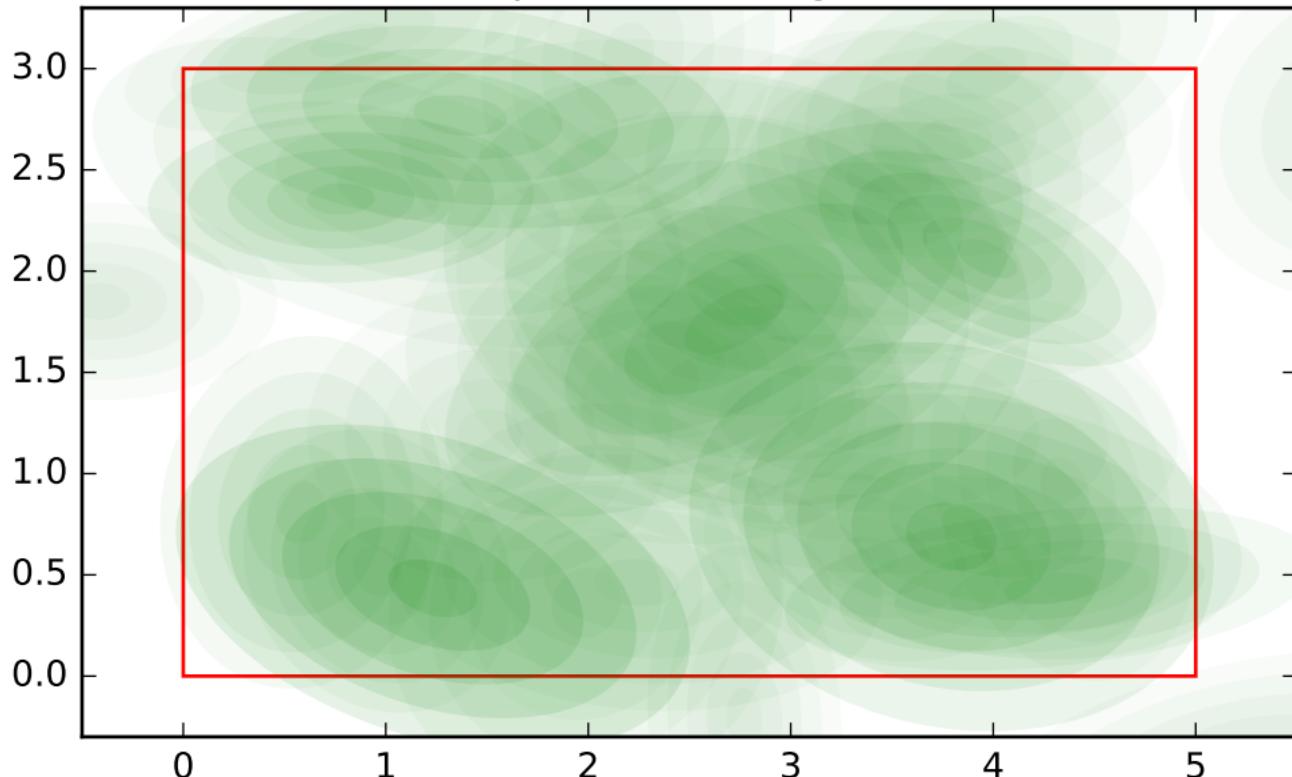

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_0, variable
name: position sibling order: 1

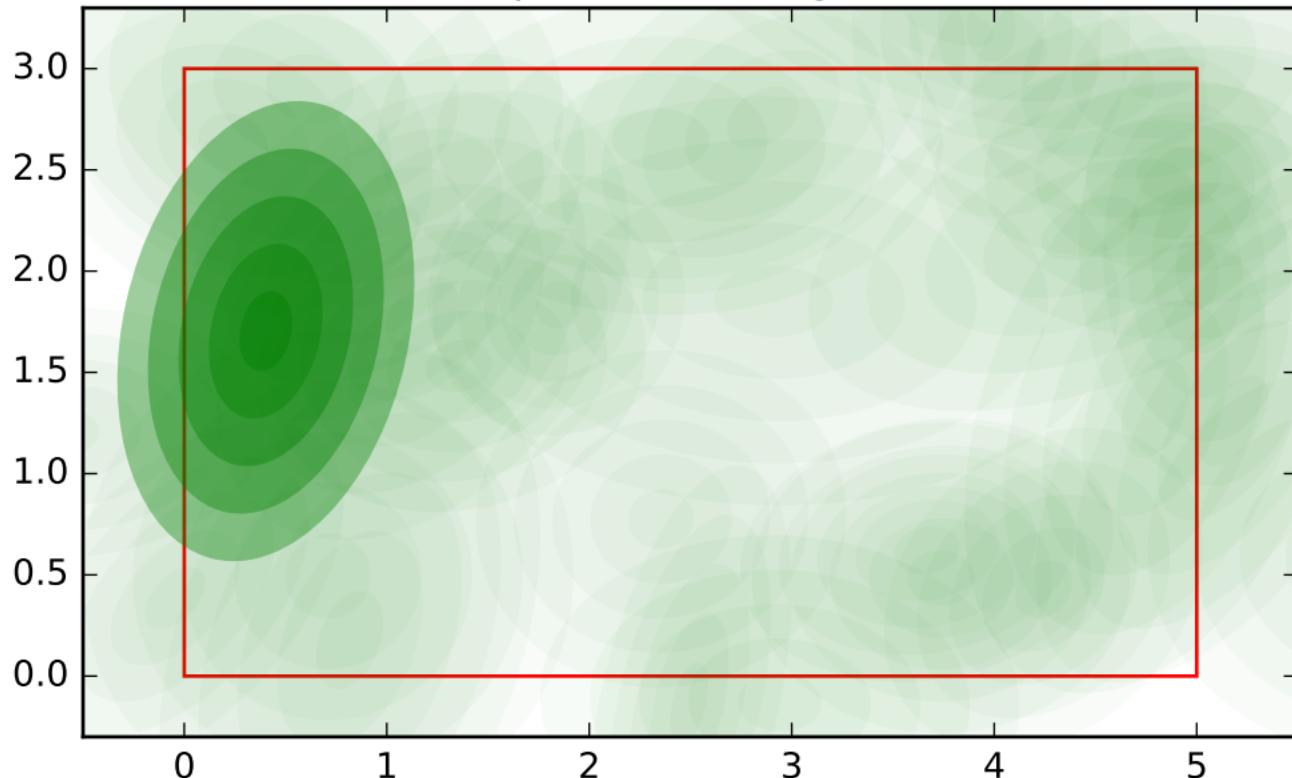

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_0, variable
name: position sibling order: 2

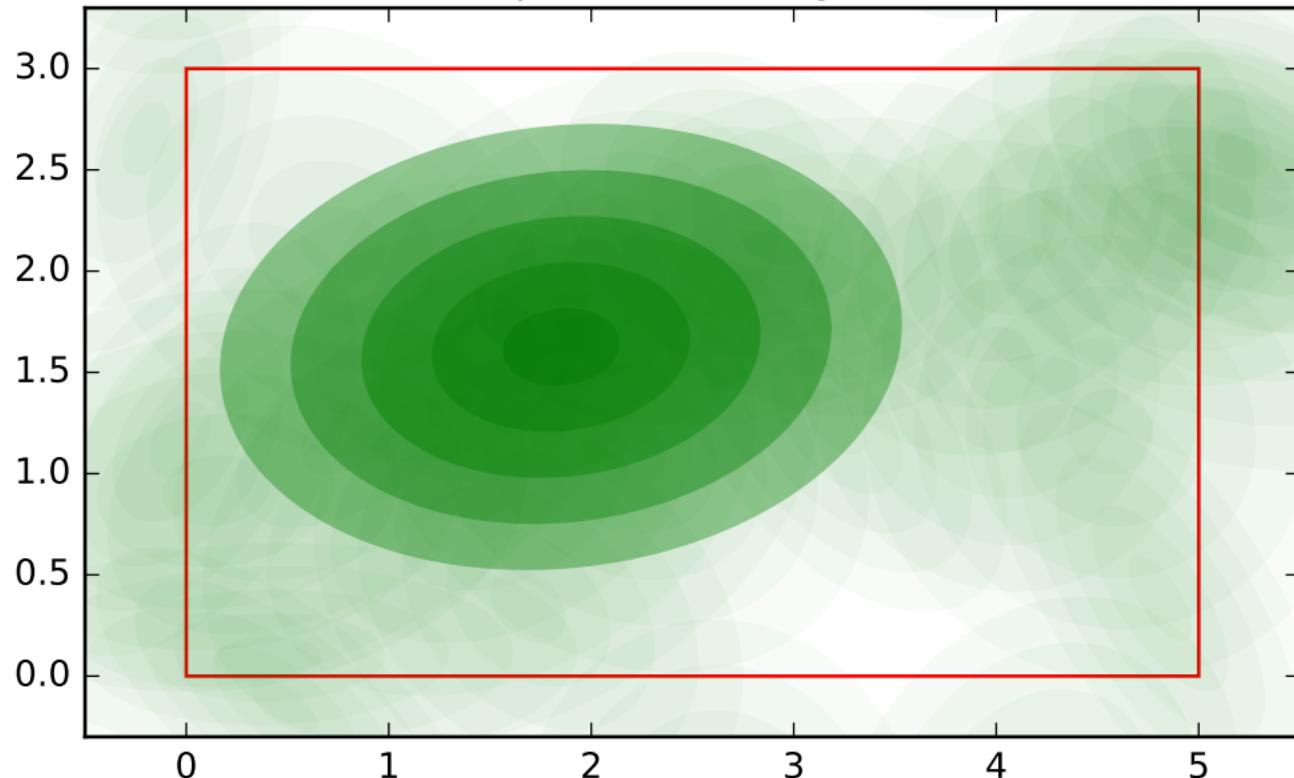

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_0, variable
name: position sibling order: 3

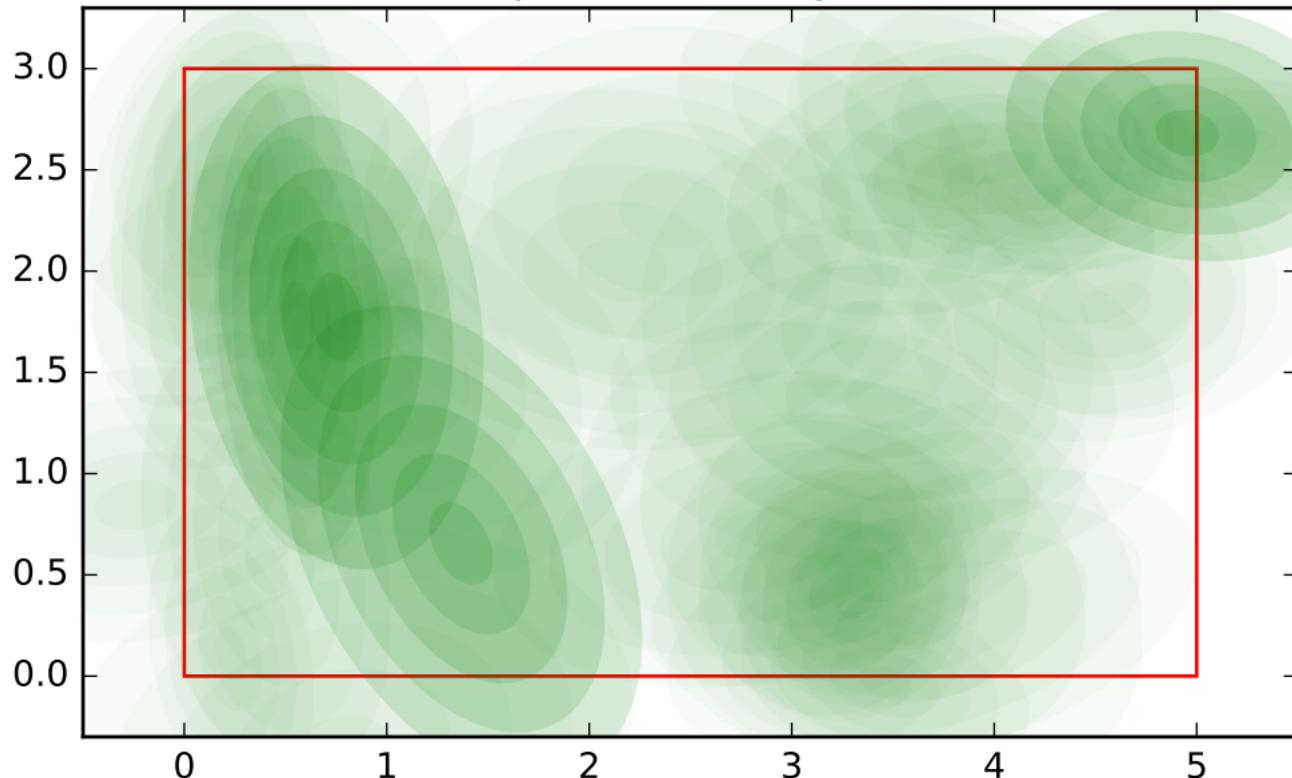

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_0, variable
name: position sibling order: 4

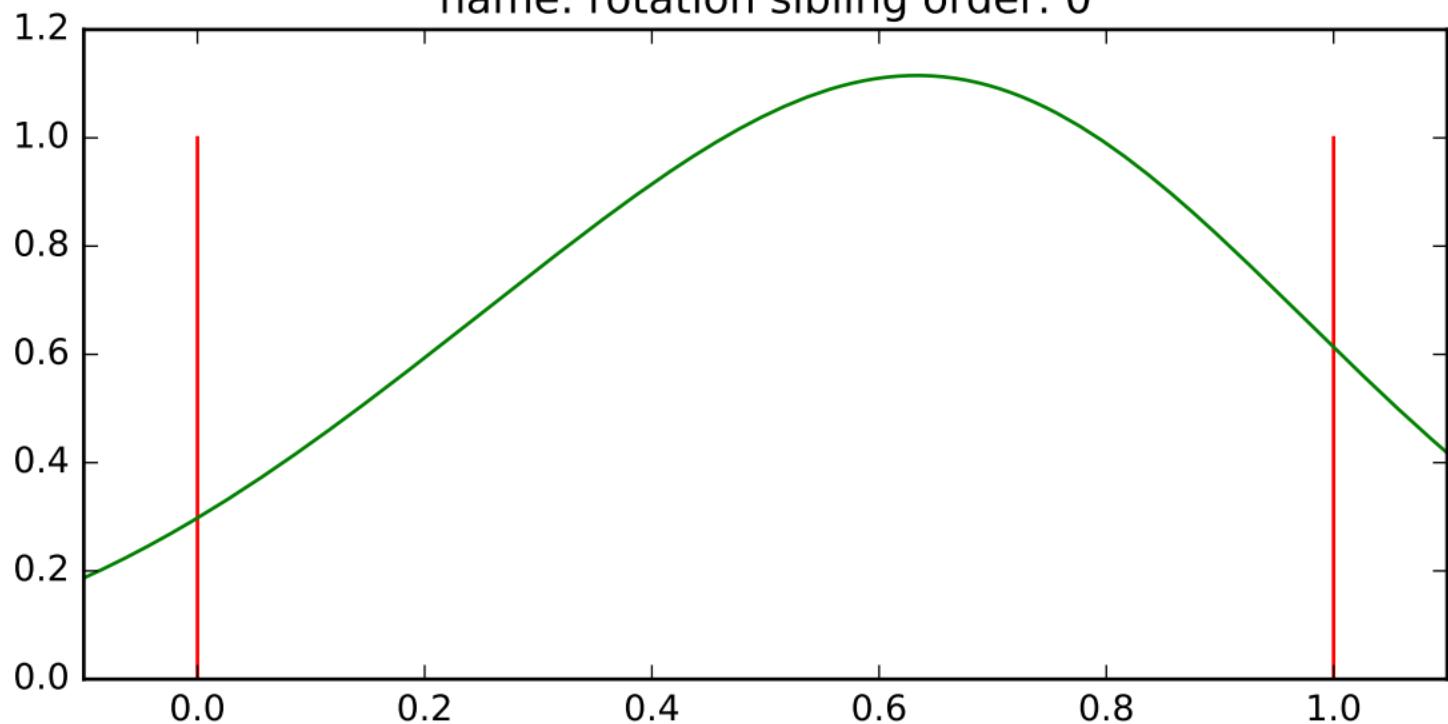

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: position sibling order: 0

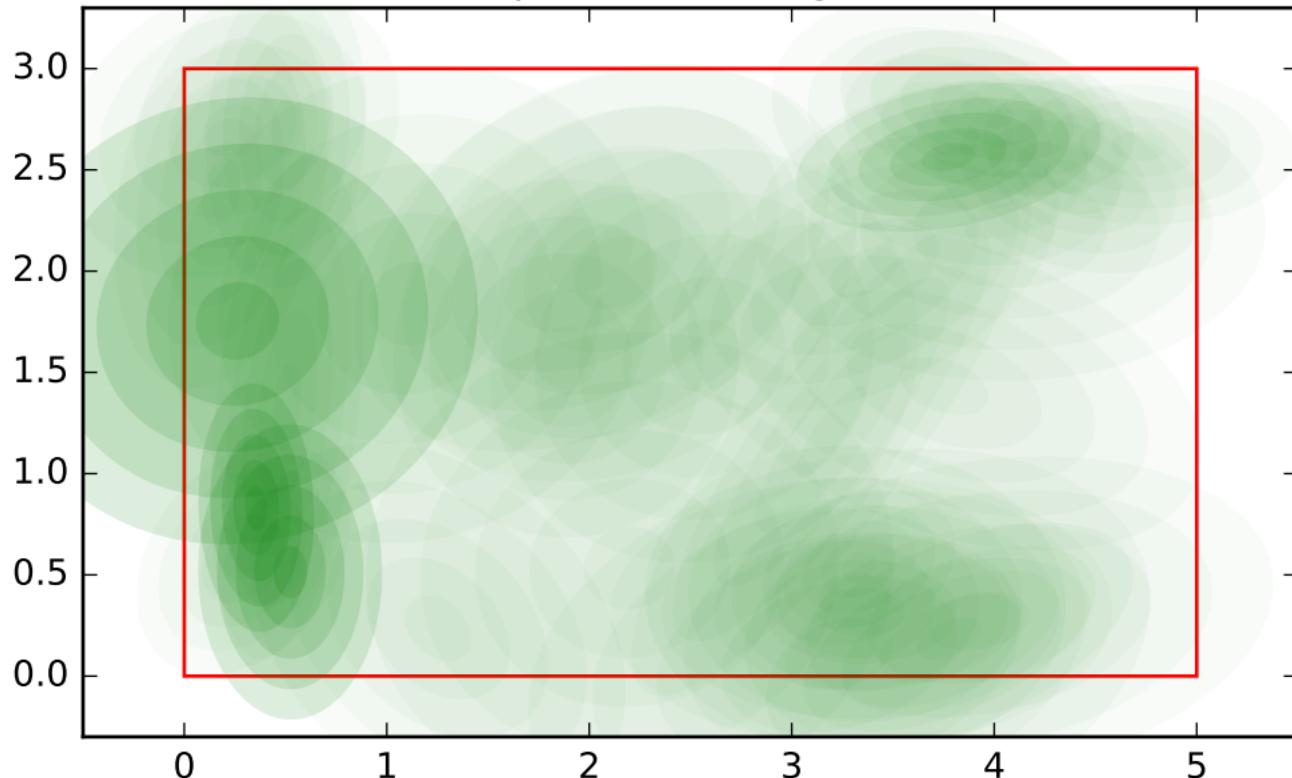

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: rotation sibling order: 0

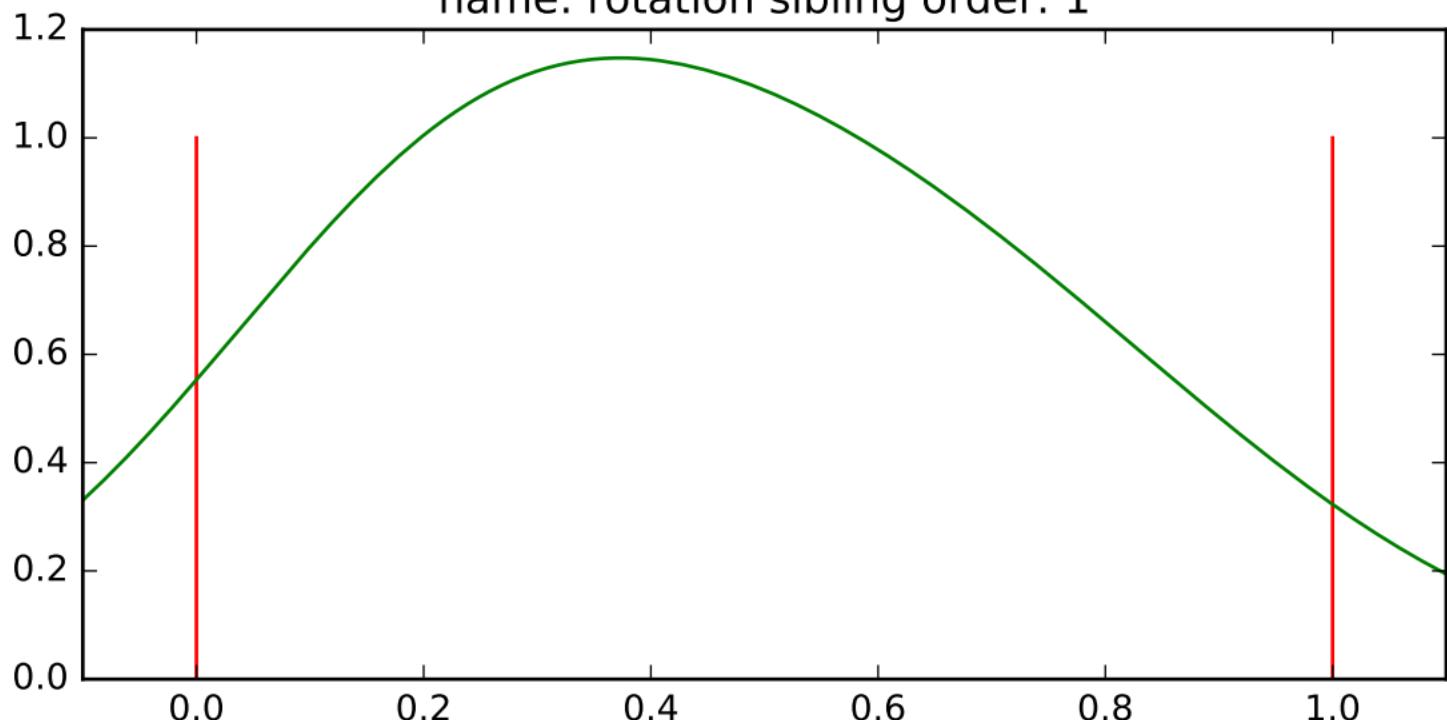

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: position sibling order: 1

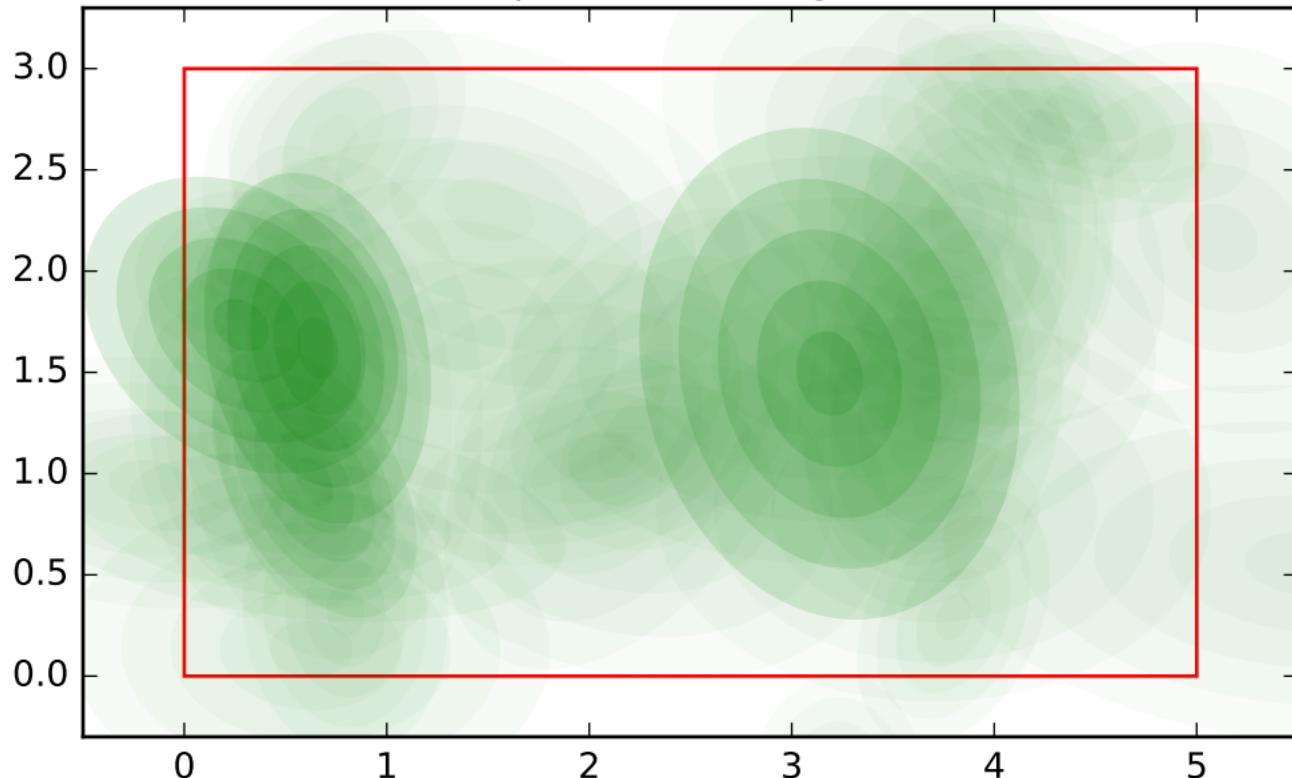

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: rotation sibling order: 1

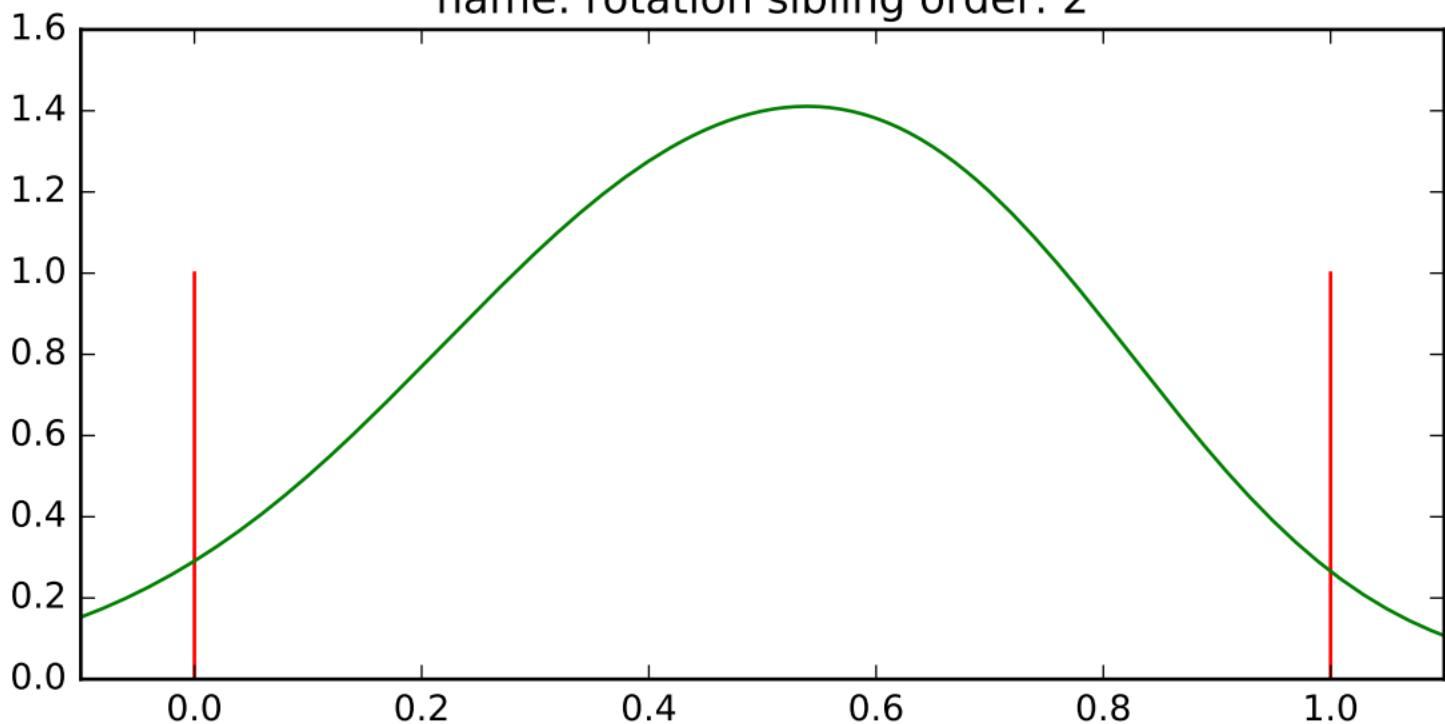

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: position sibling order: 2

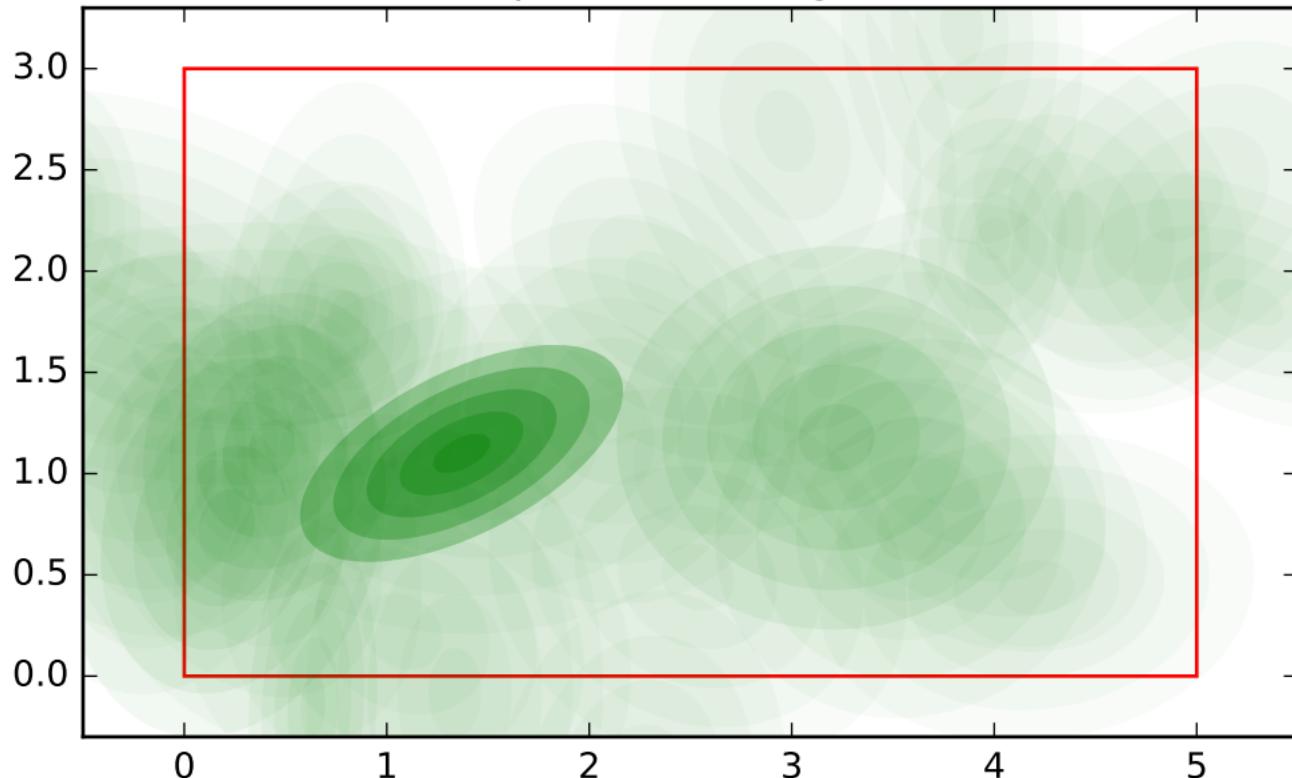

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: rotation sibling order: 2

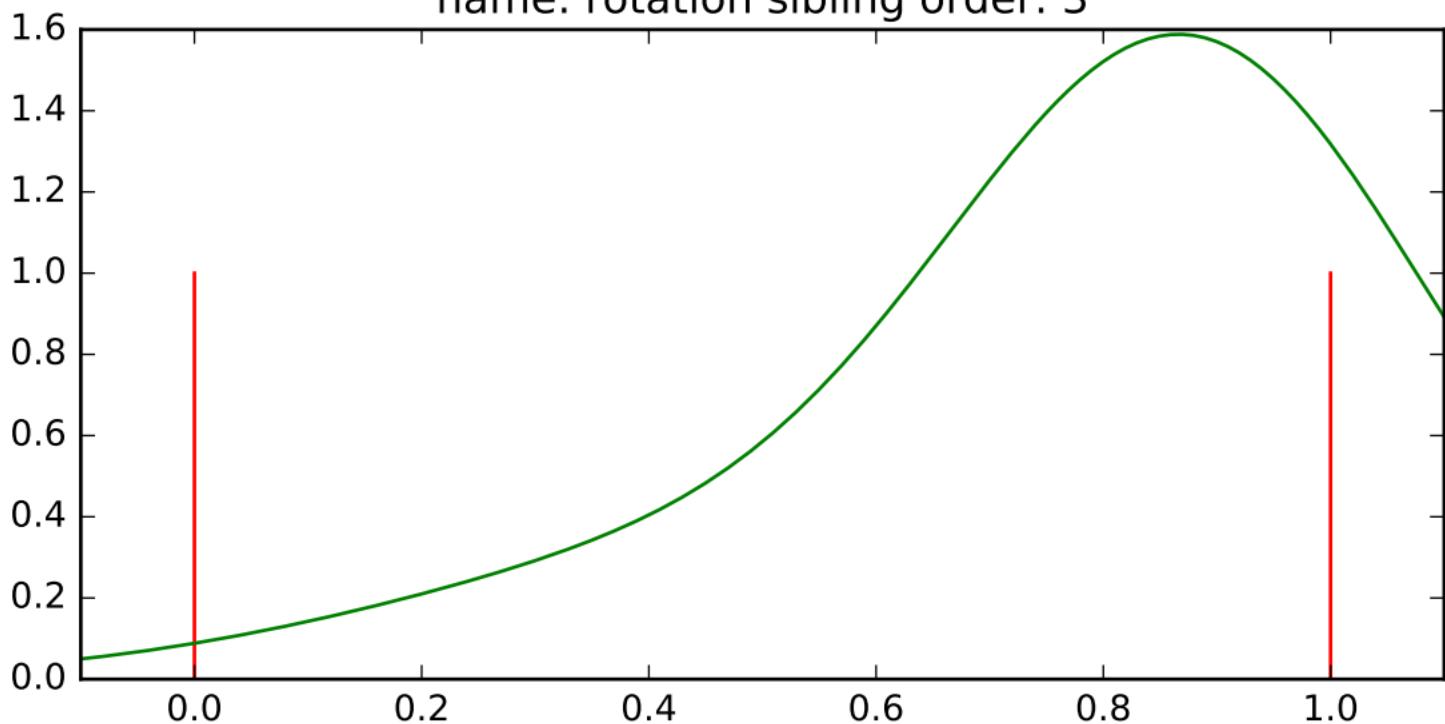

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: position sibling order: 3

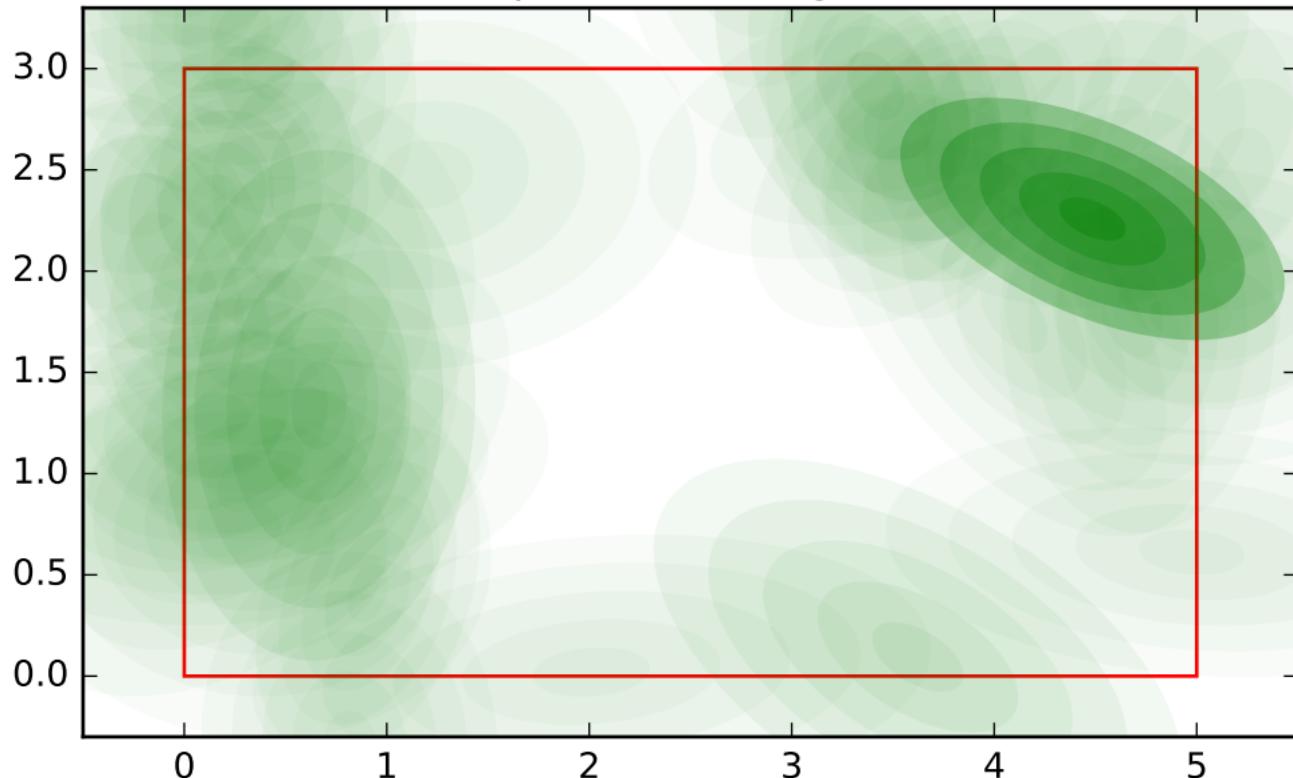

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: rotation sibling order: 3

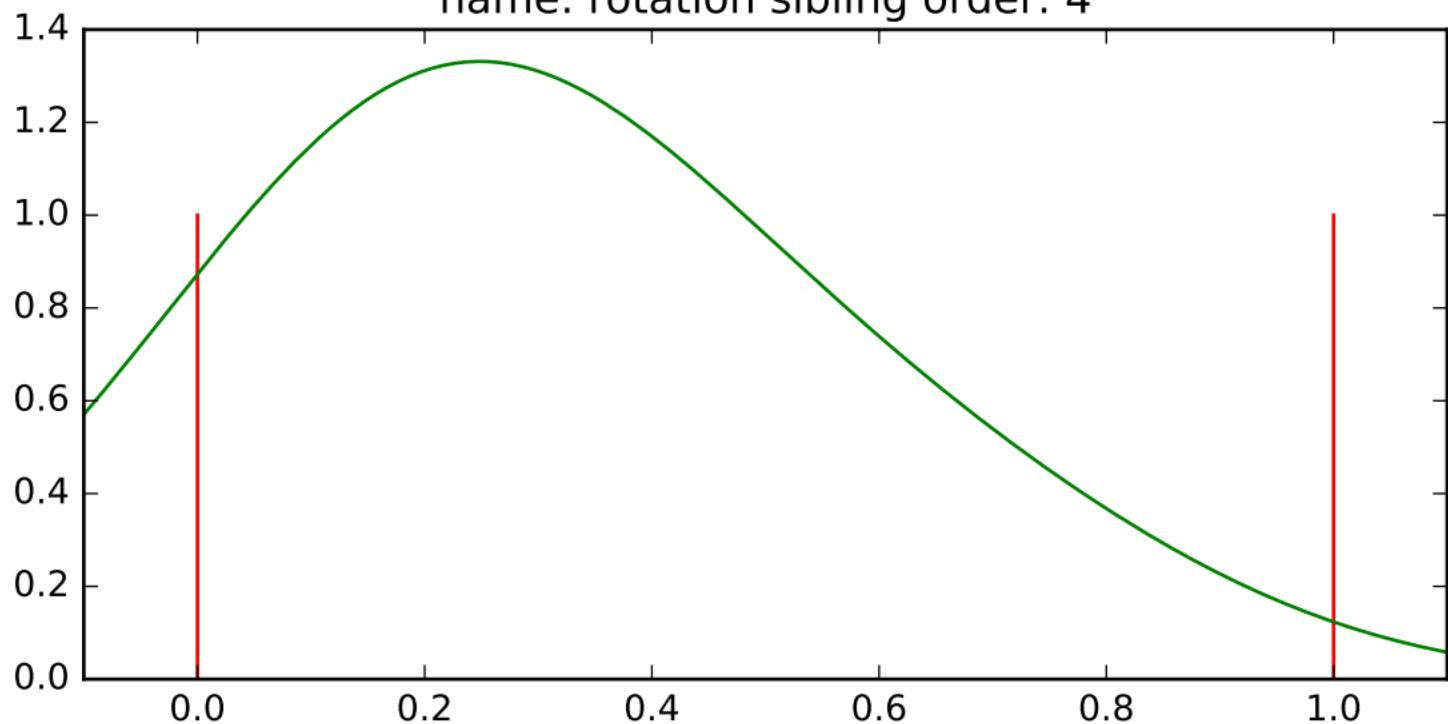

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable
name: position sibling order: 4

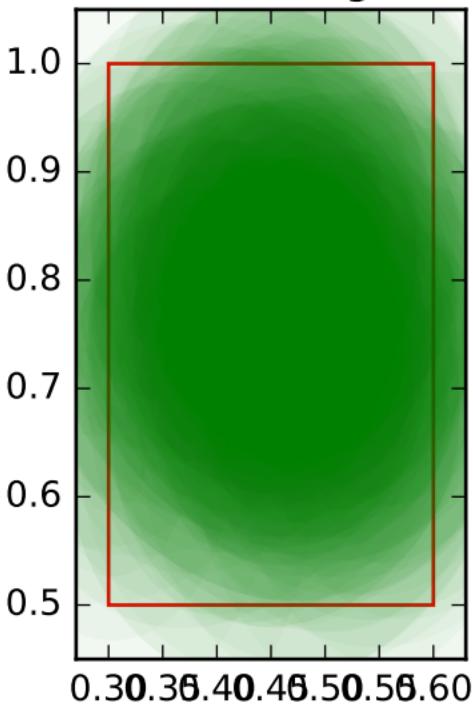

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_1, variable name: rotation sibling order: 4

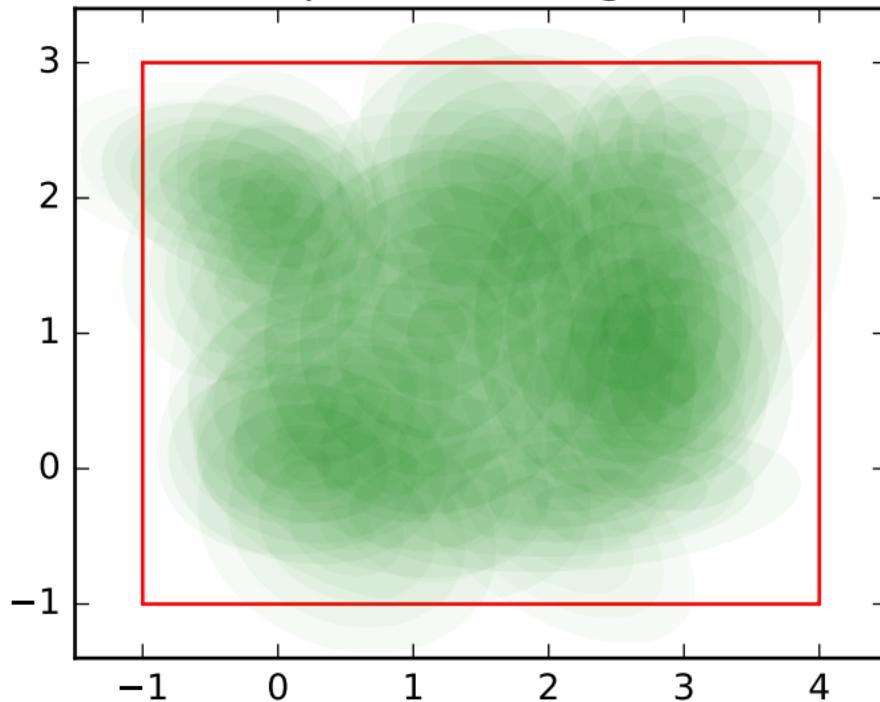

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable name: size sibling order: 0

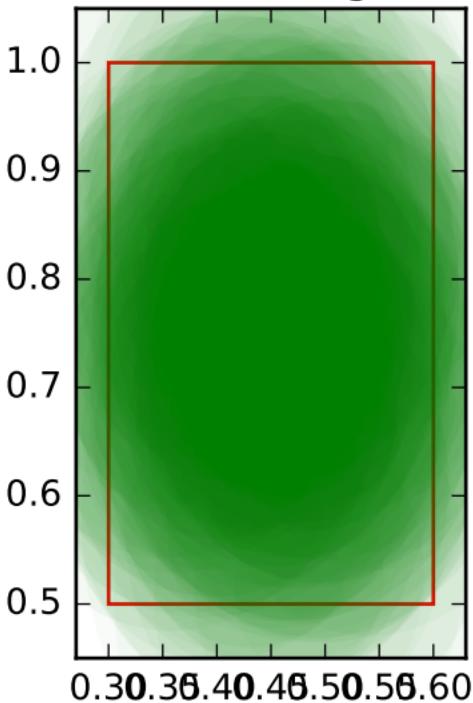

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable name: position sibling order: 0

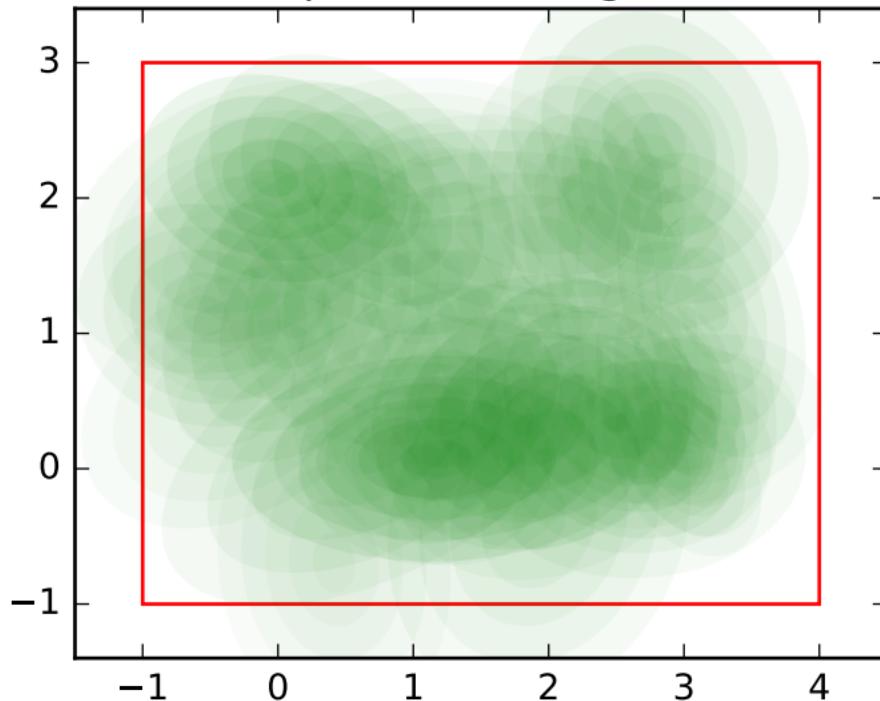

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable name: size sibling order: 1

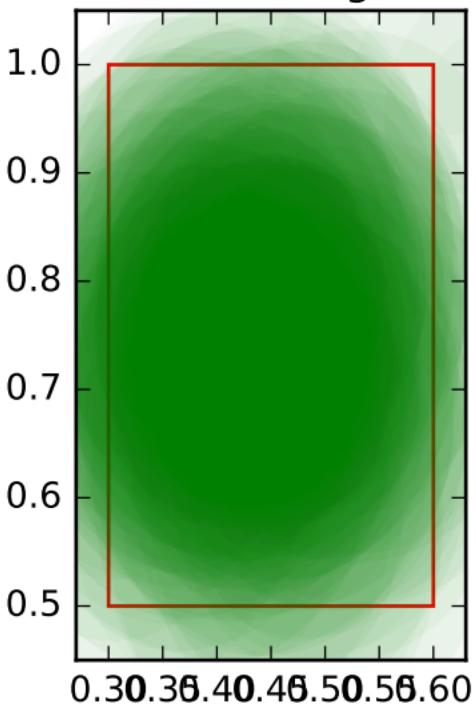

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable
name: position sibling order: 1

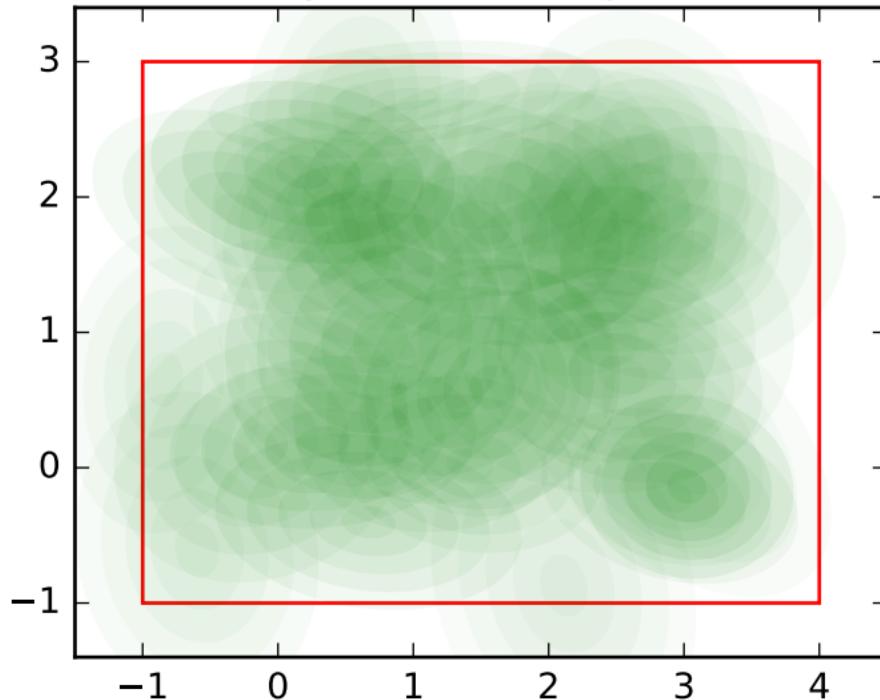

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable name: size sibling order: 2

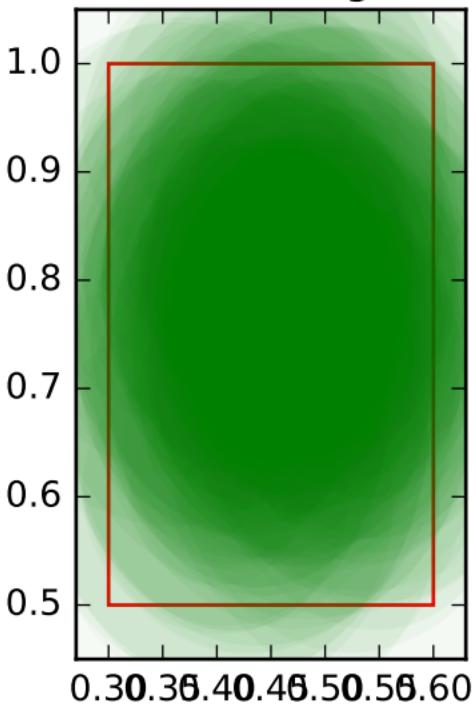

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable
name: position sibling order: 2

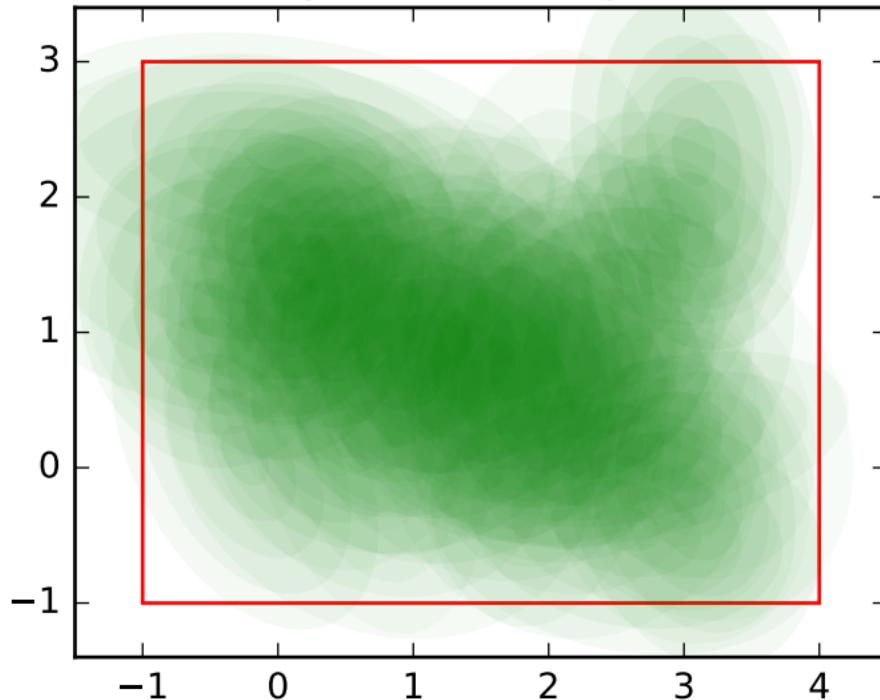

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable name: size sibling order: 3

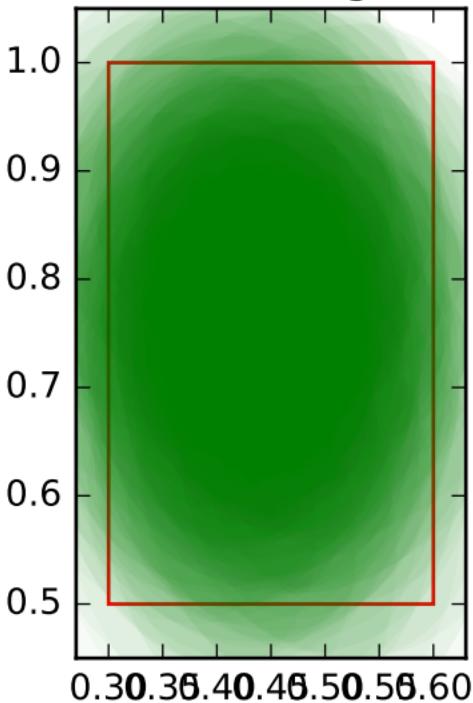

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable name: position sibling order: 3

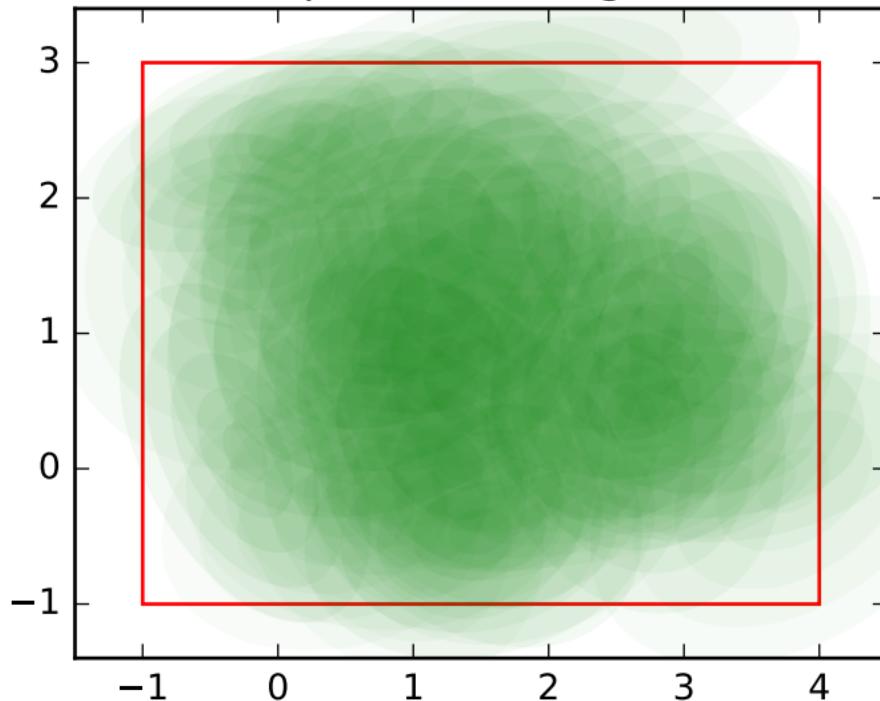

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable name: size sibling order: 4

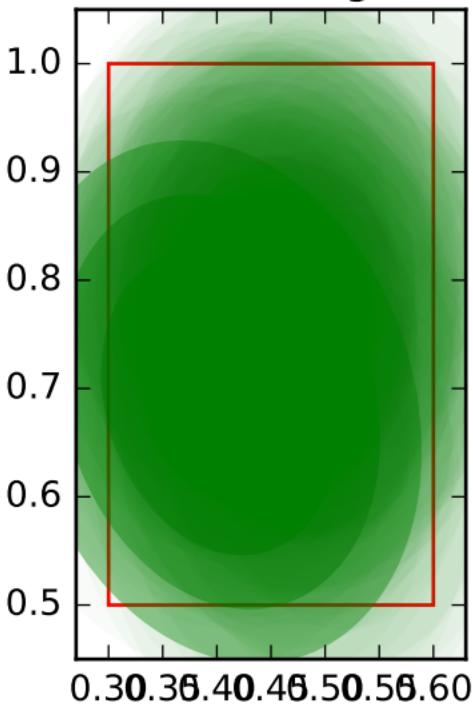

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_3, variable
name: position sibling order: 4

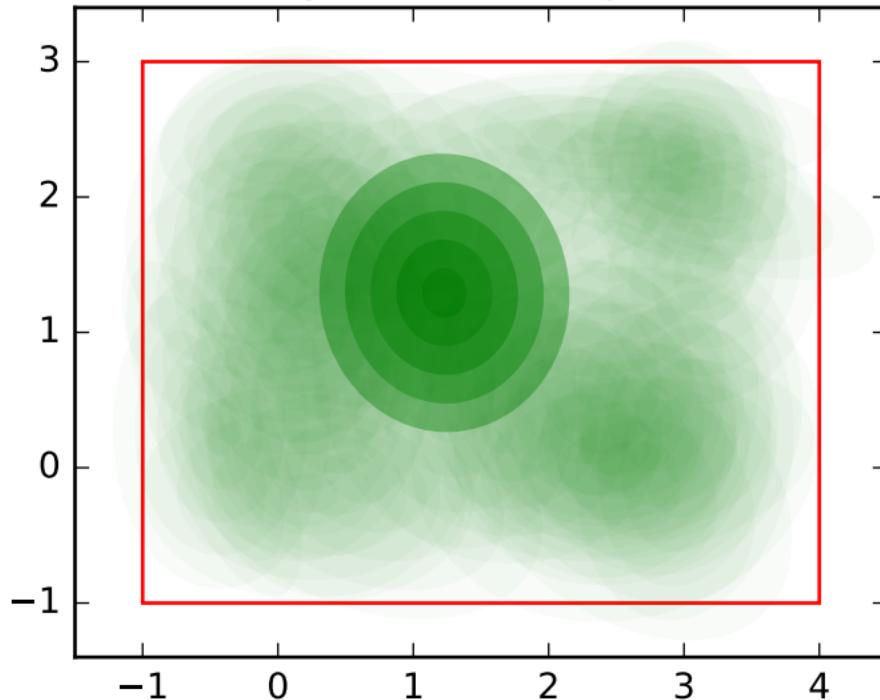

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: size sibling order: 0

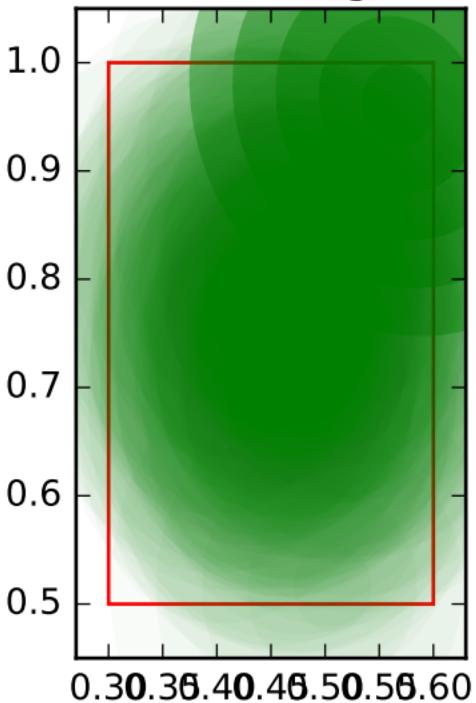

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: position sibling order: 0

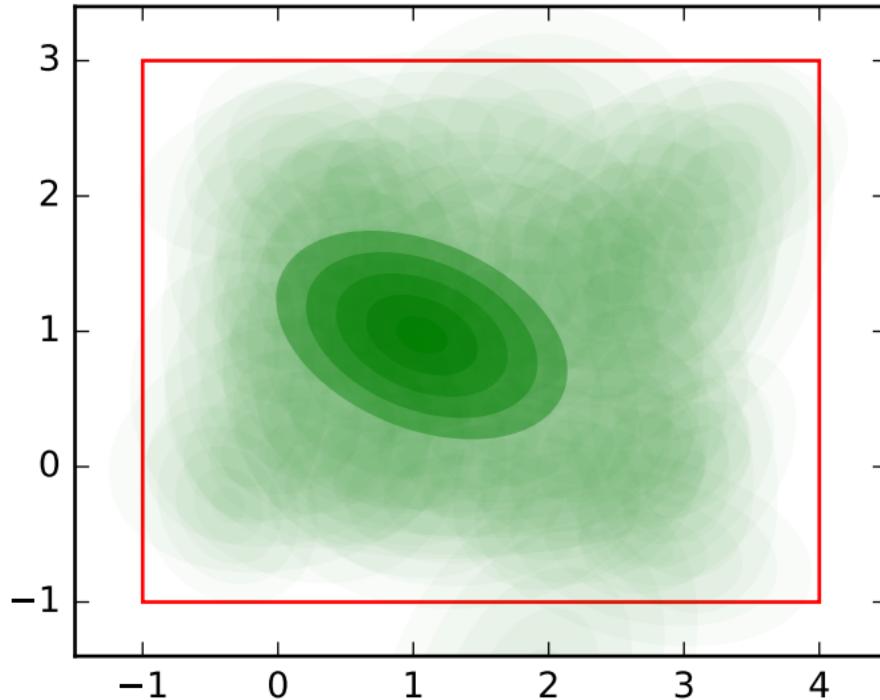

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: size sibling order: 1

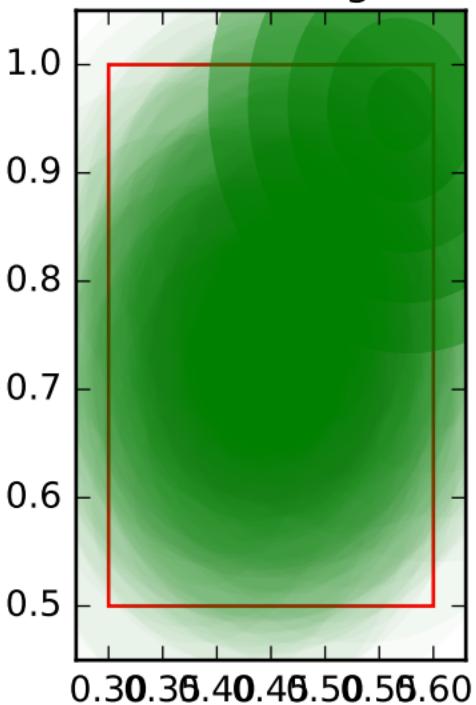

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable
name: position sibling order: 1

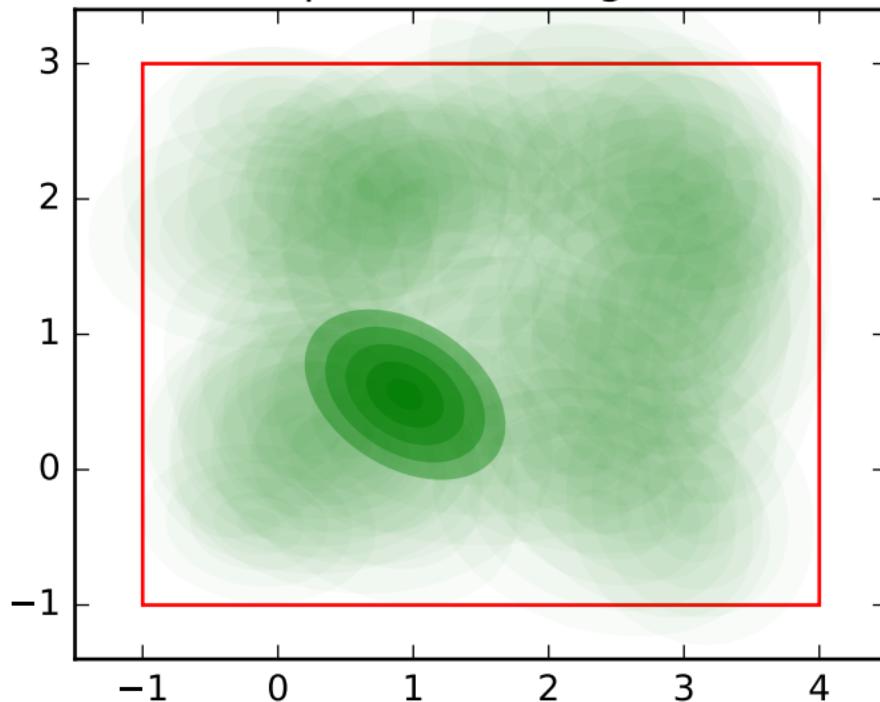

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: size sibling order: 2

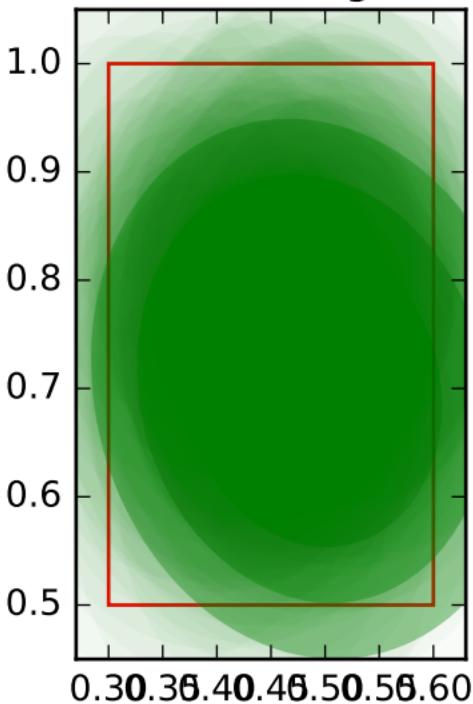

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: position sibling order: 2

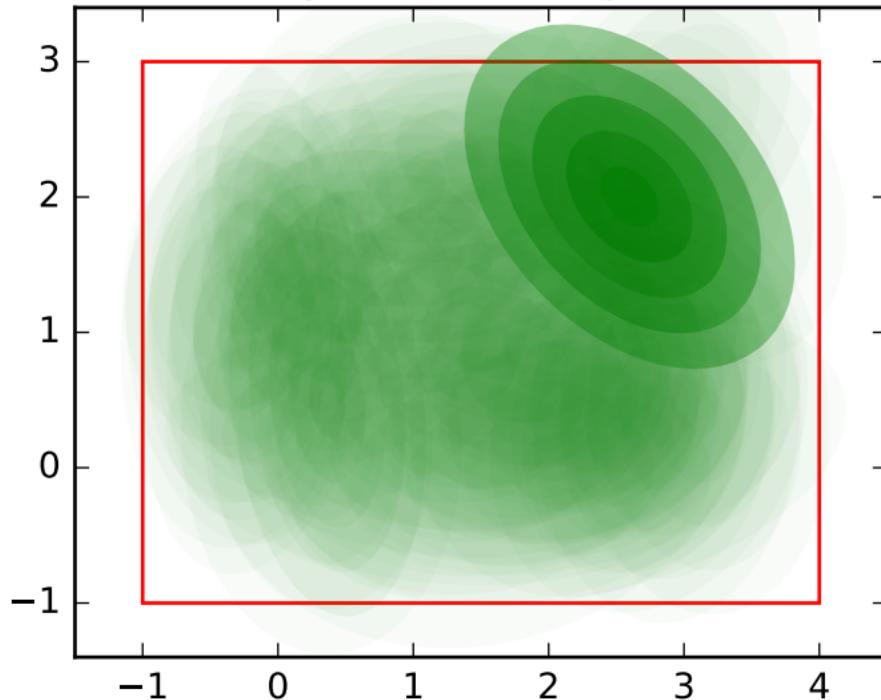

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: size sibling order: 3

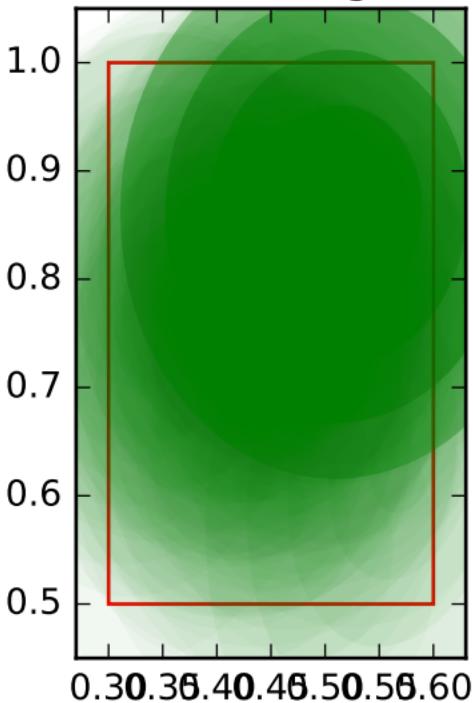

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: position sibling order: 3

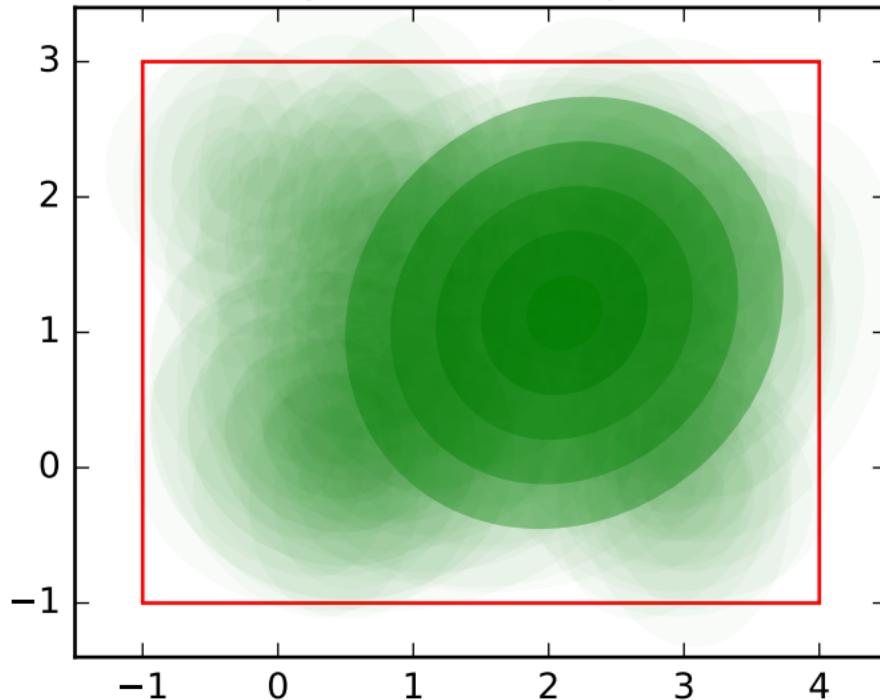

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: size sibling order: 4

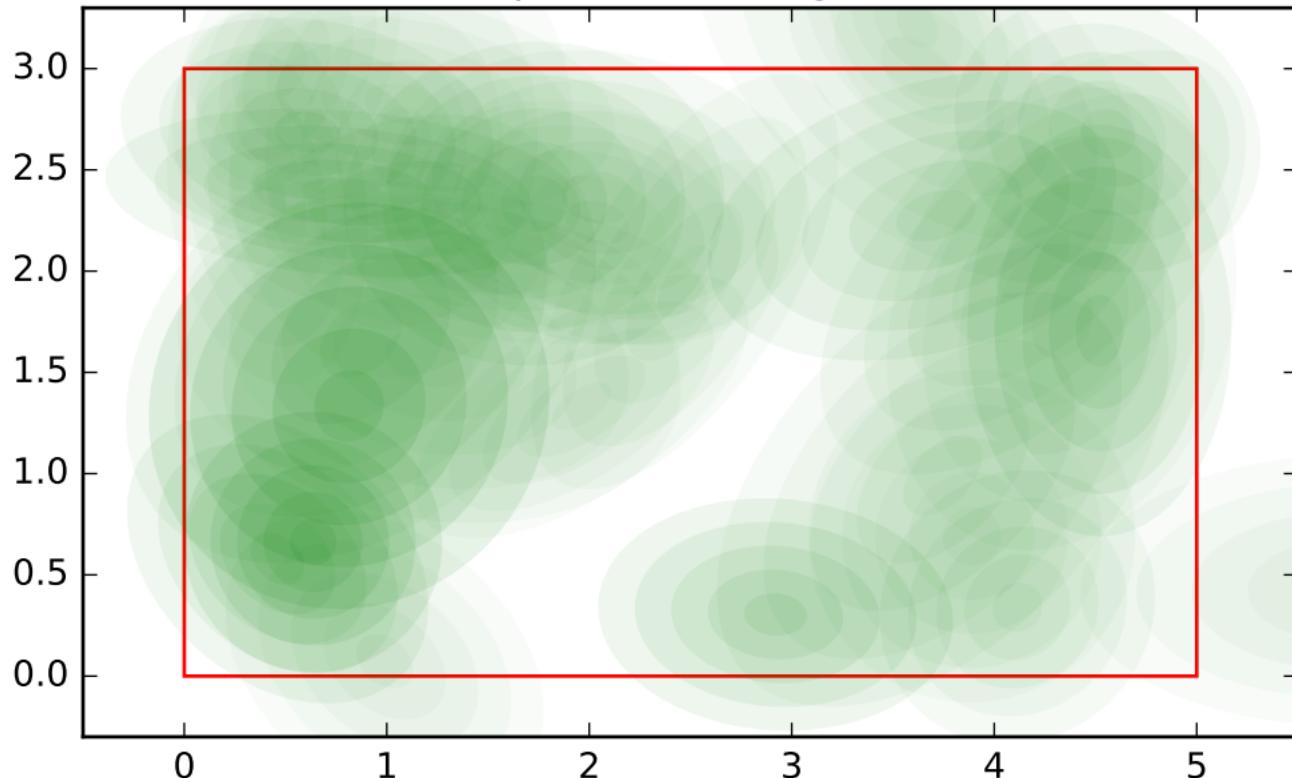

test for regression condition, model fitness target distance

regression with condition: 0.6 ,training_model_4, variable name: position sibling order: 4

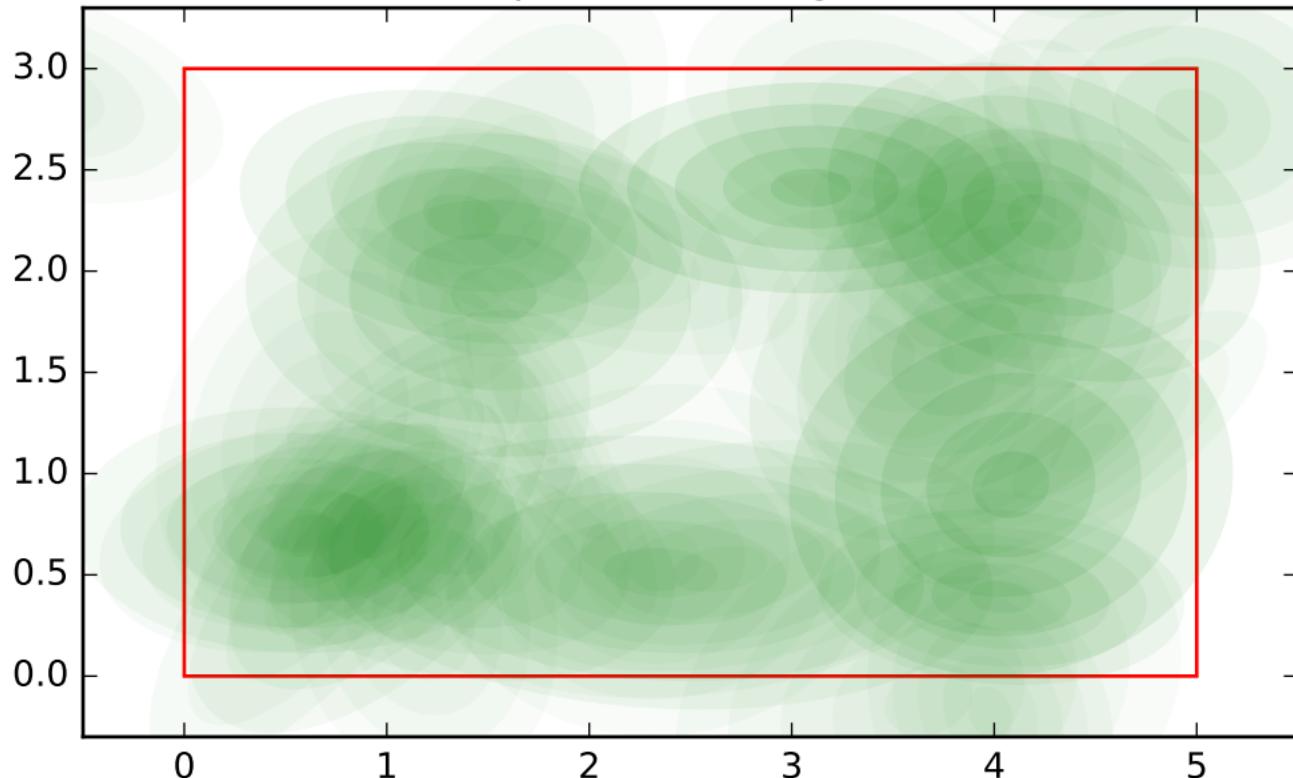

test for regression condition, model fitness target distance

regression with condition: 0.7 ,training_model_0, variable
name: position sibling order: 0

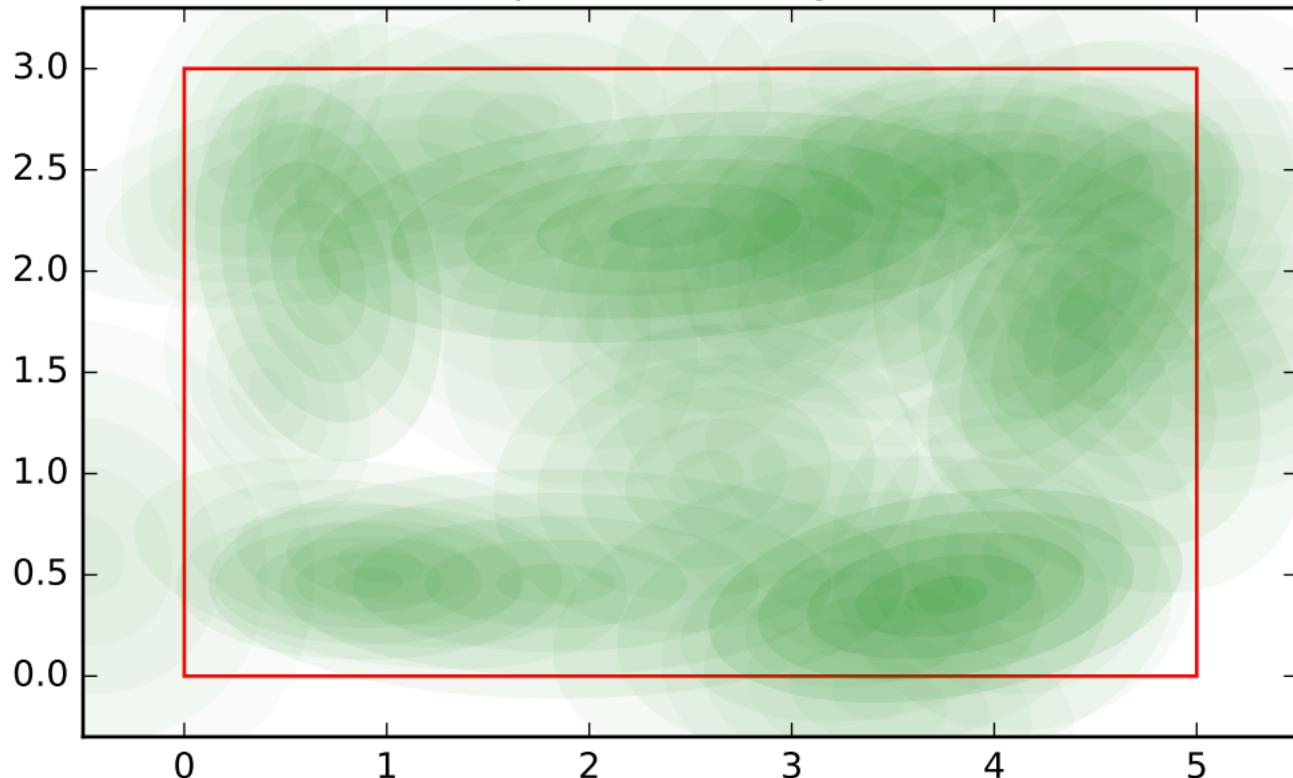

test for regression condition, model fitness target distance

regression with condition: 0.7 ,training_model_0, variable
name: position sibling order: 1

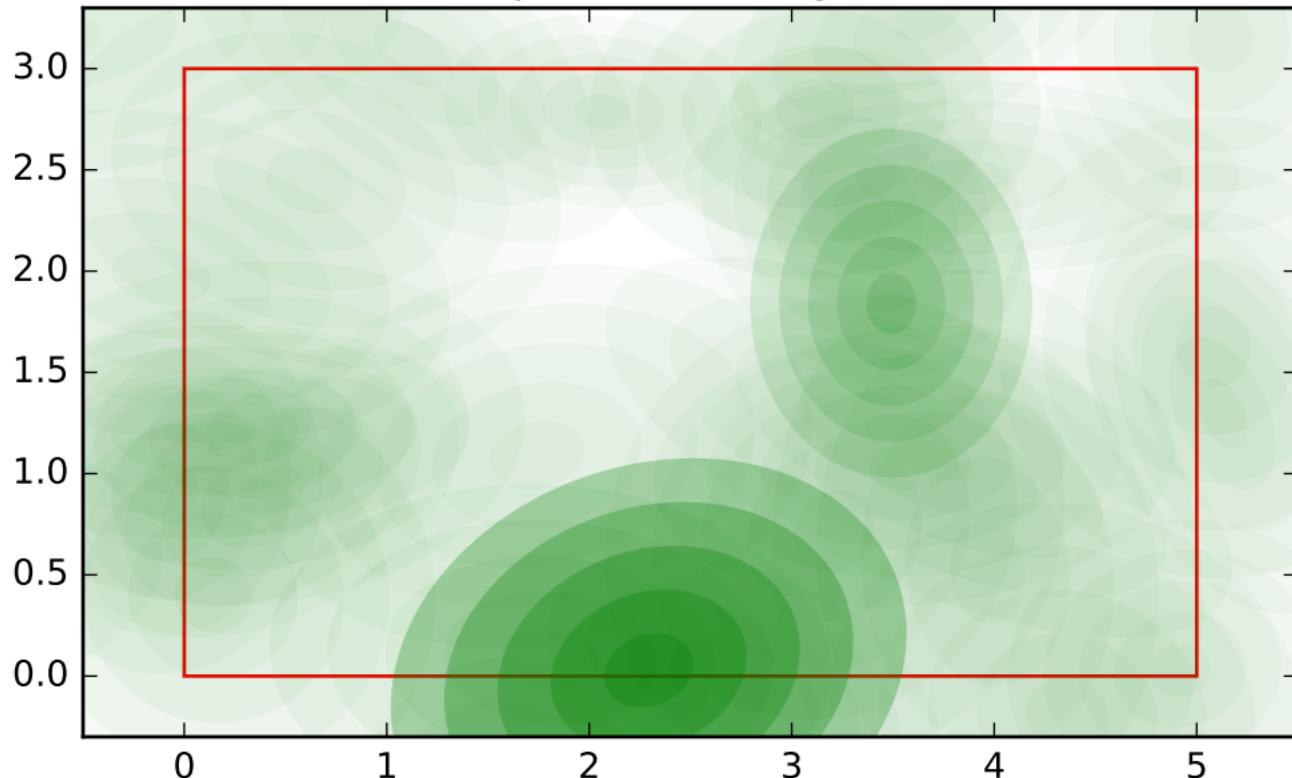

test for regression condition, model fitness target distance

regression with condition: 0.7 ,training_model_0, variable
name: position sibling order: 2

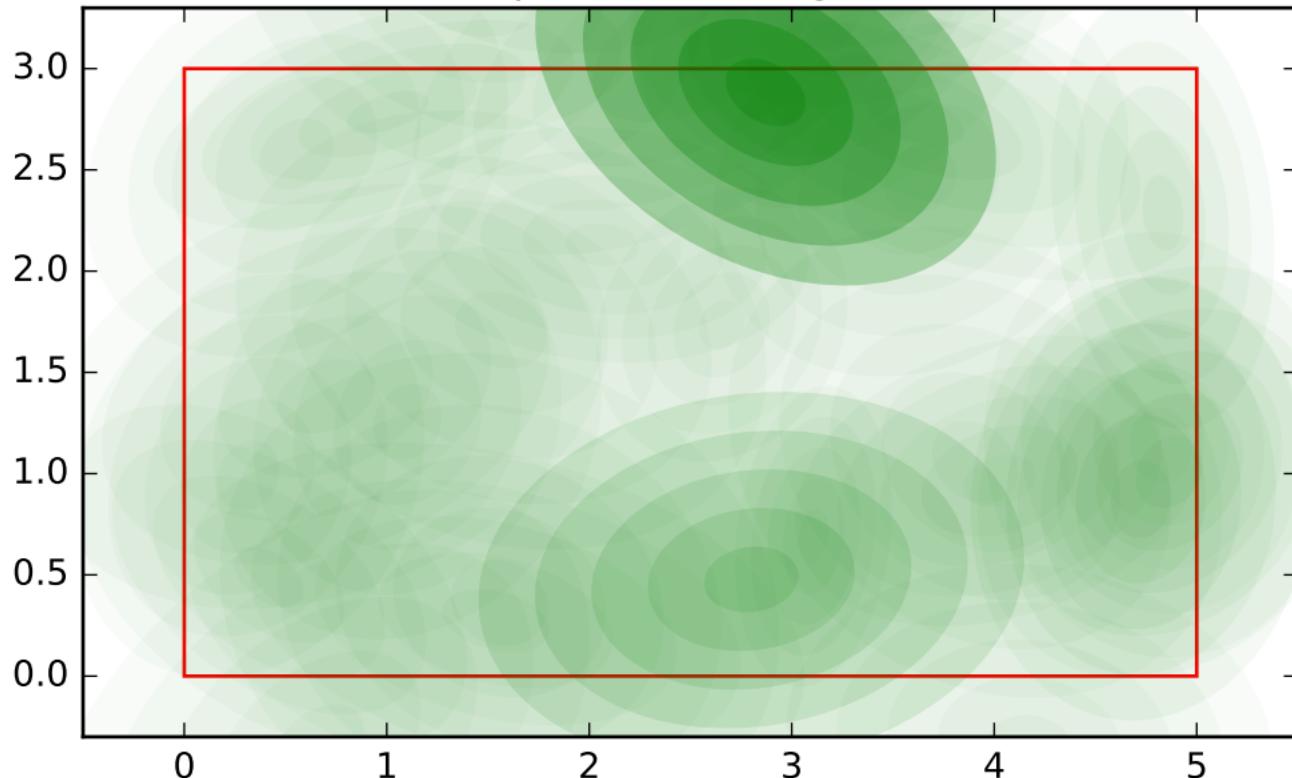

test for regression condition, model fitness target distance

regression with condition: 0.7 ,training_model_0, variable
name: position sibling order: 3

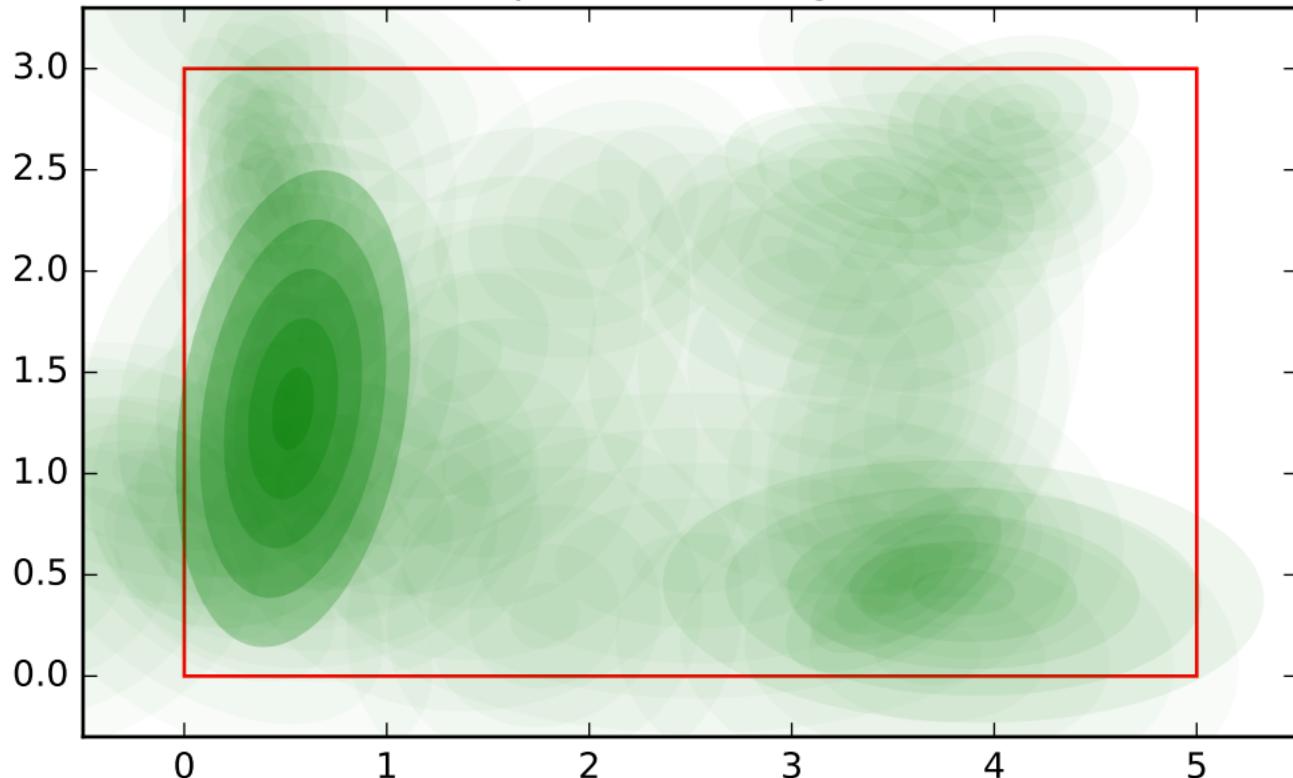

test for regression condition, model fitness target distance

regression with condition: 0.7 ,training_model_0, variable
name: position sibling order: 4

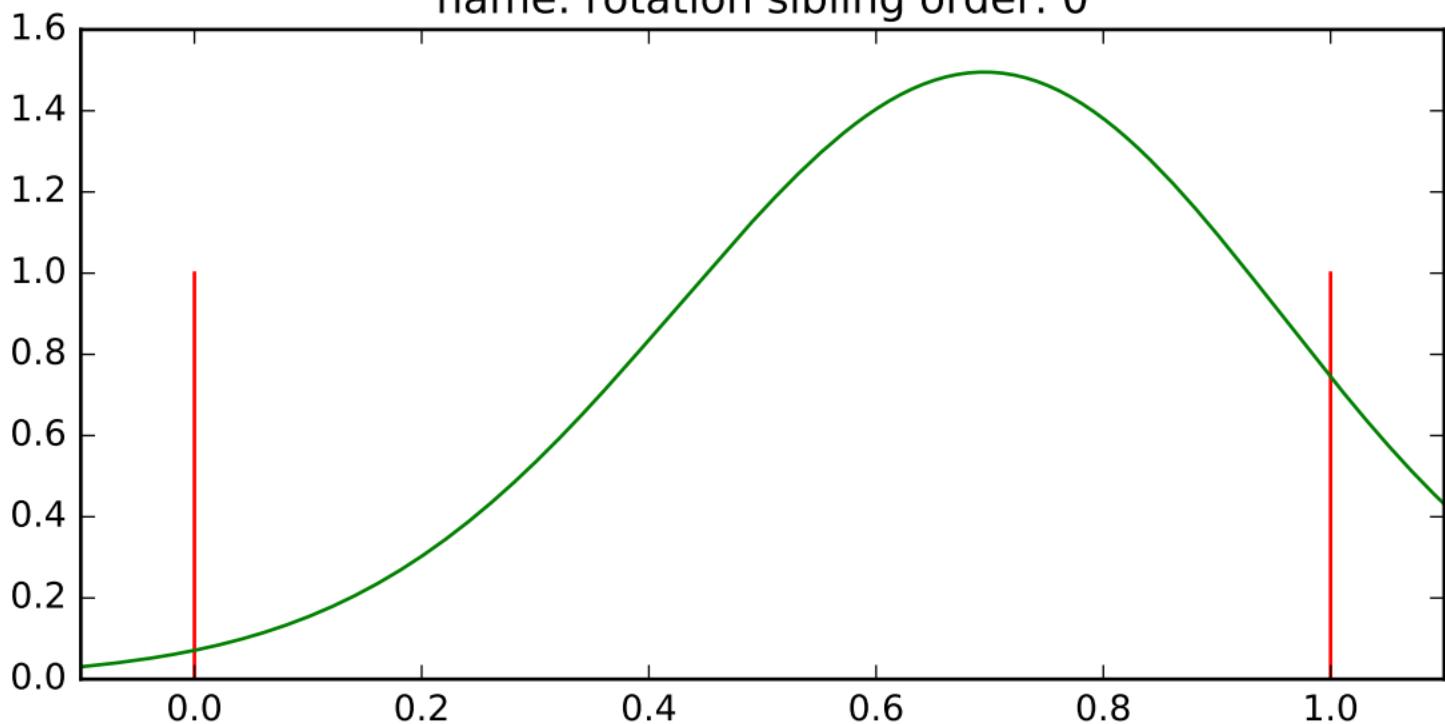

test for regression condition, model fitness target distance

regression with condition: 0.7 ,training_model_1, variable
name: position sibling order: 0

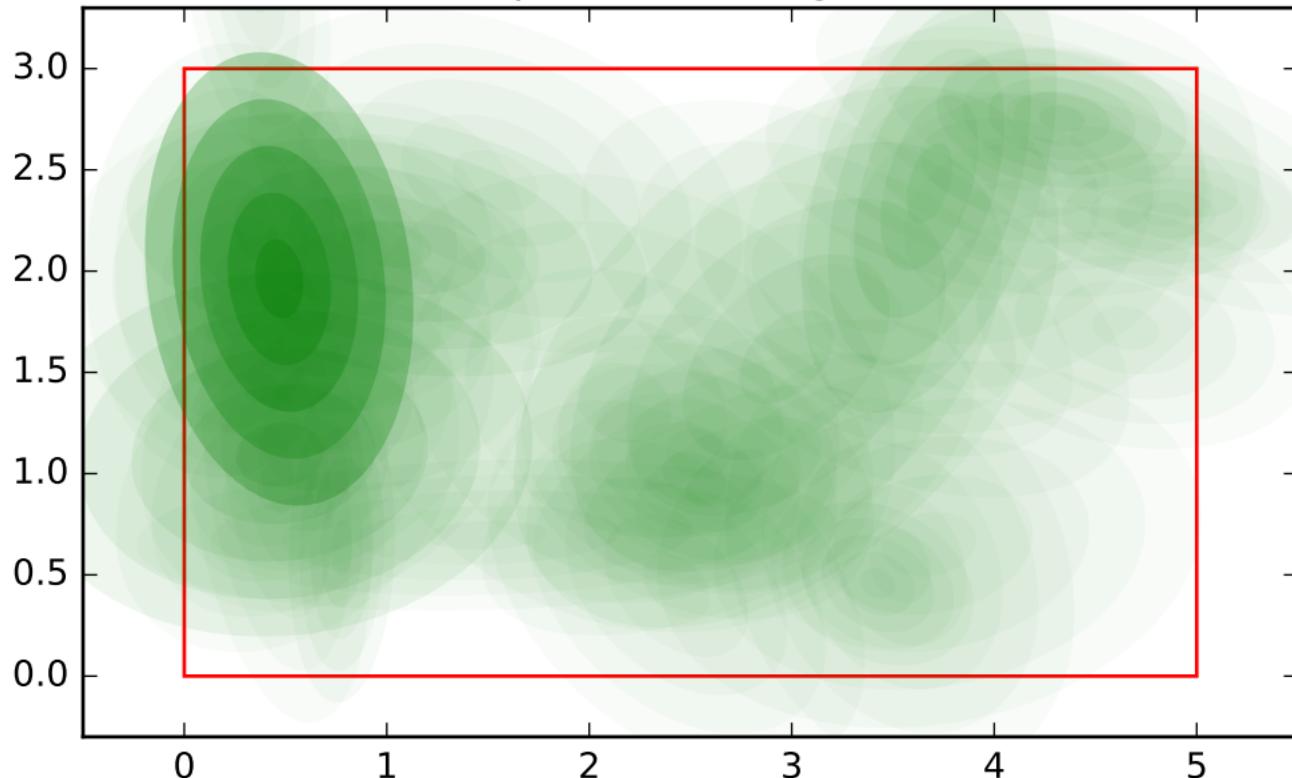

test for regression condition, model fitness target distance

regression with condition: 0.7 ,training_model_1, variable

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_1, variable
name: rotation sibling order: 1

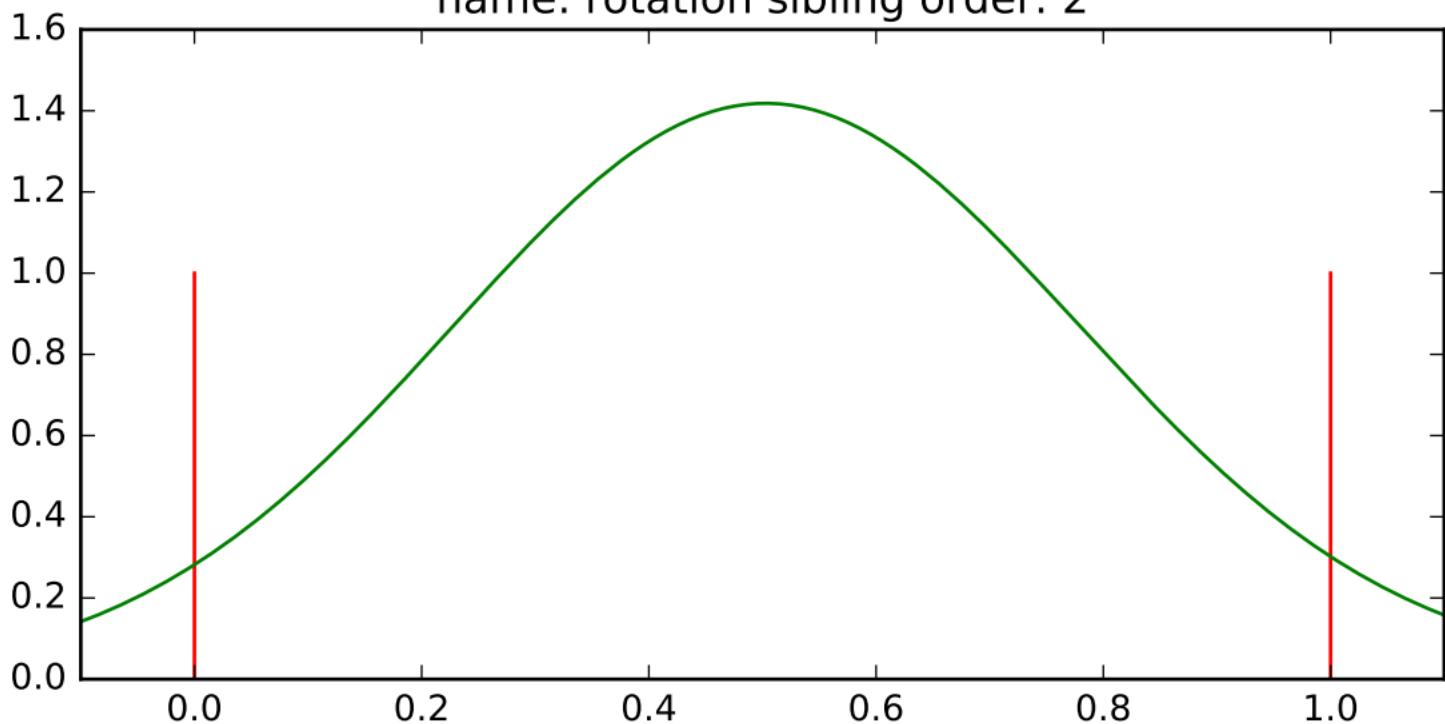

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_1, variable
name: position sibling order: 2

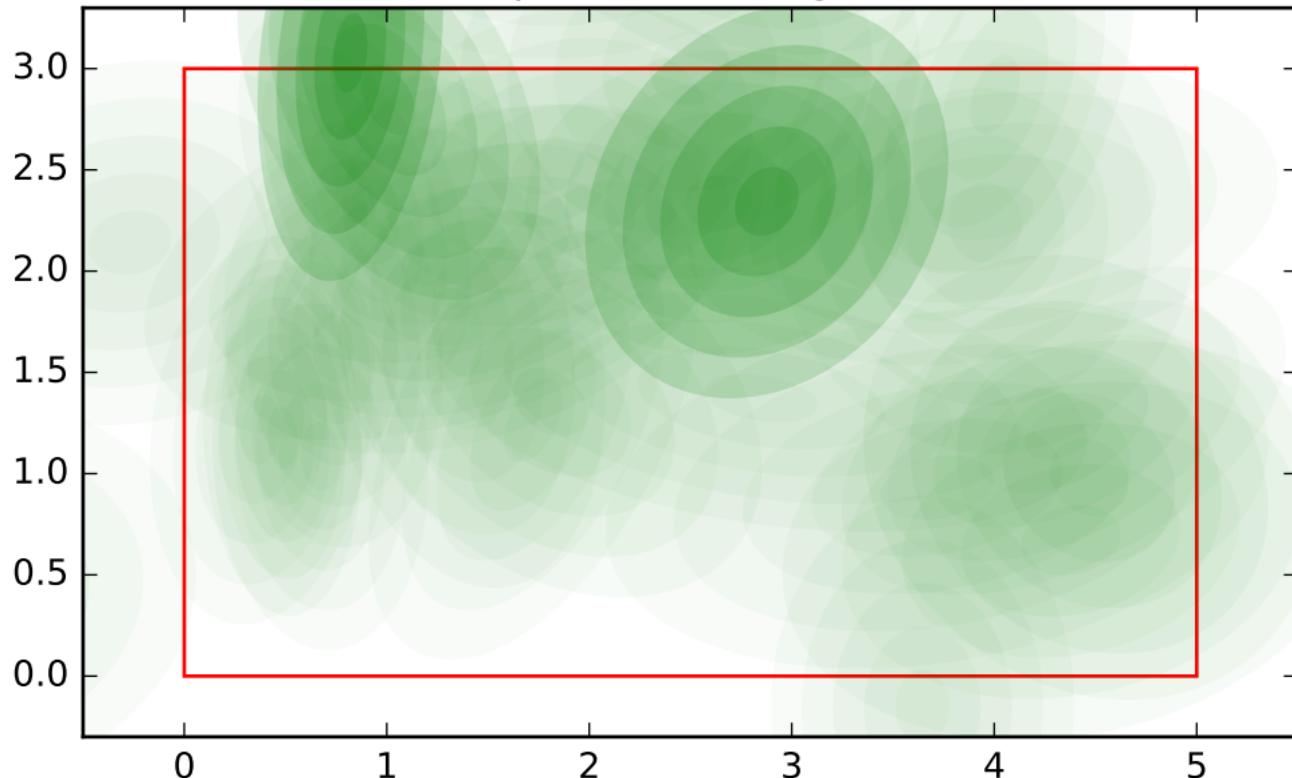

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_1, variable
name: rotation sibling order: 2

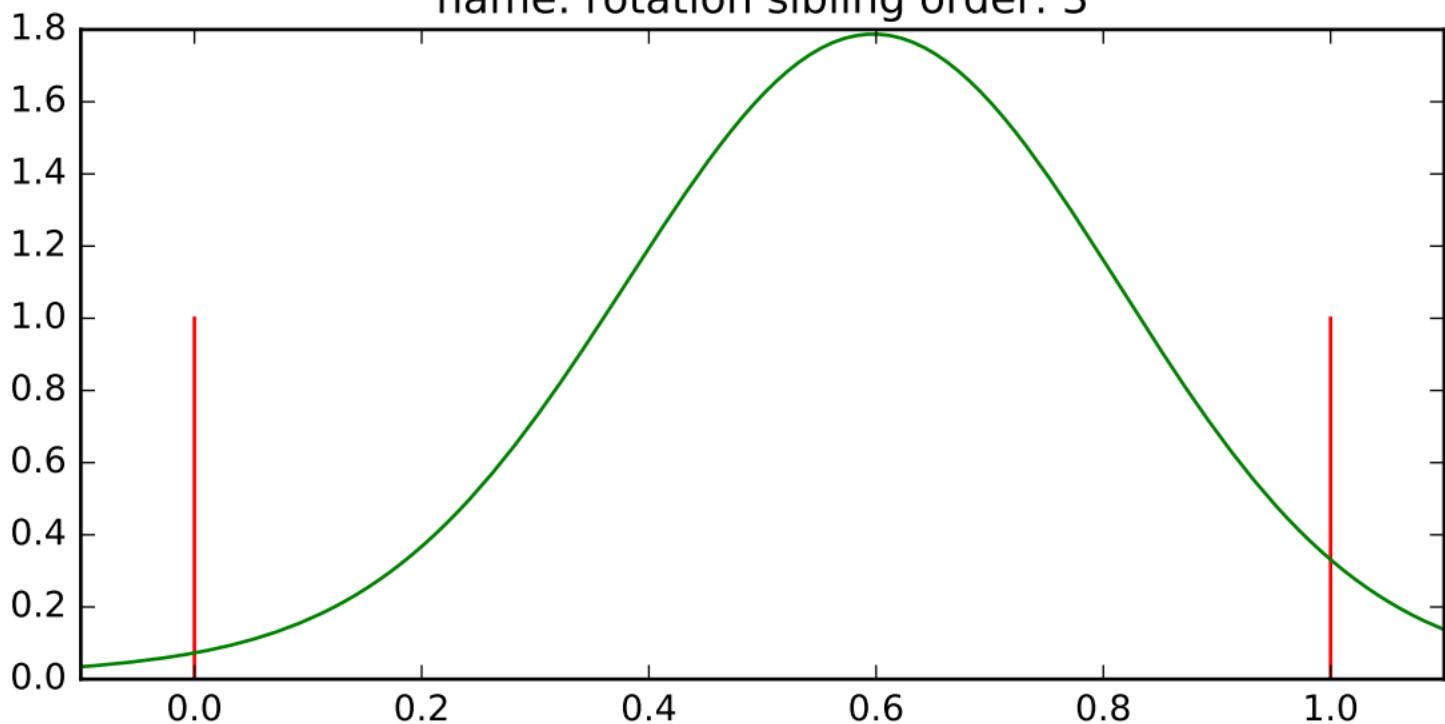

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_1, variable
name: position sibling order: 3

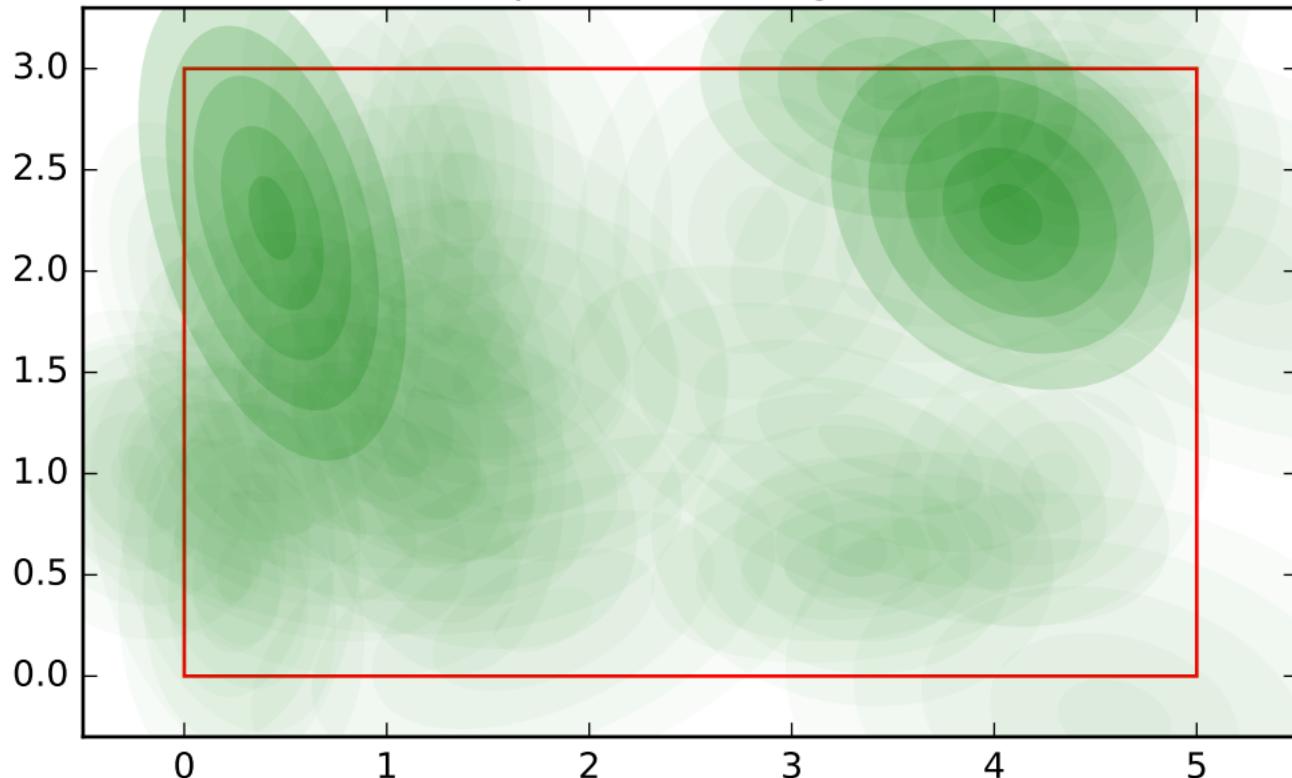

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_1, variable
name: rotation sibling order: 3

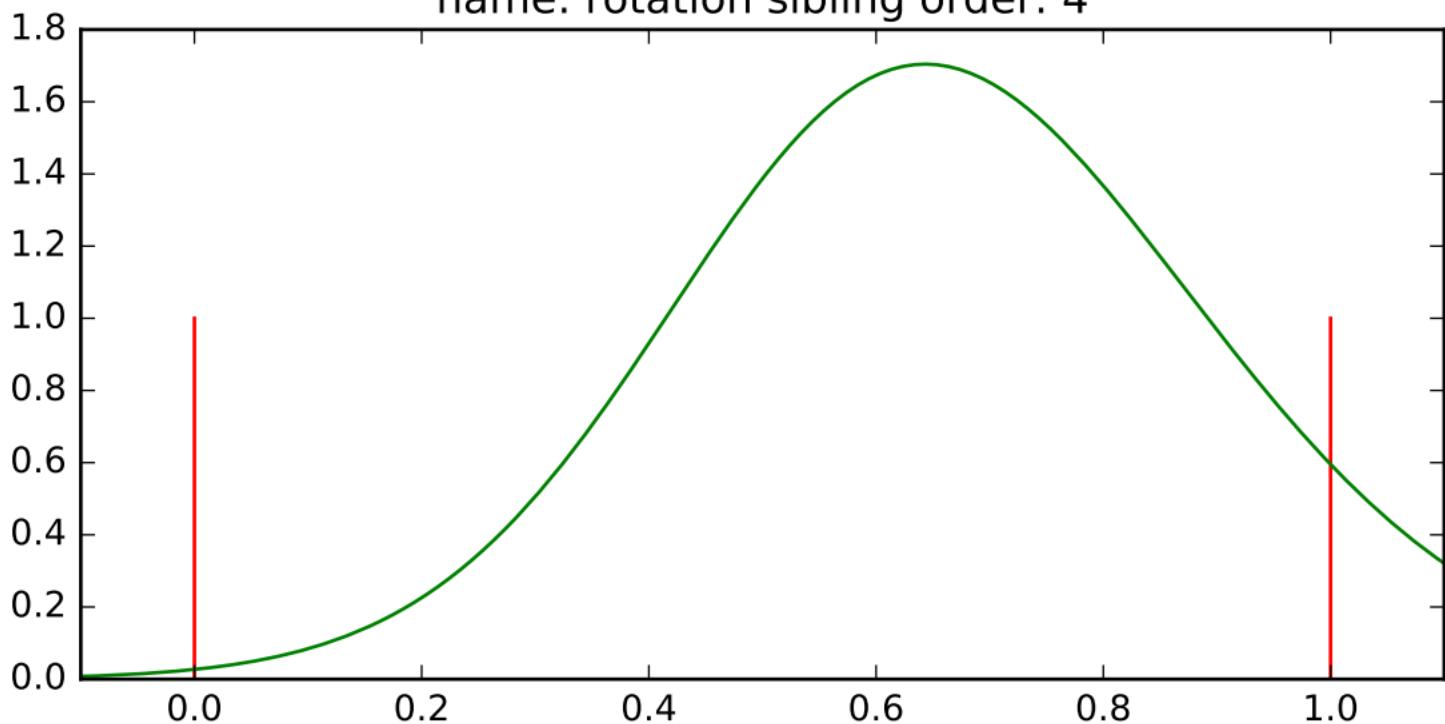

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_1, variable
name: position sibling order: 4

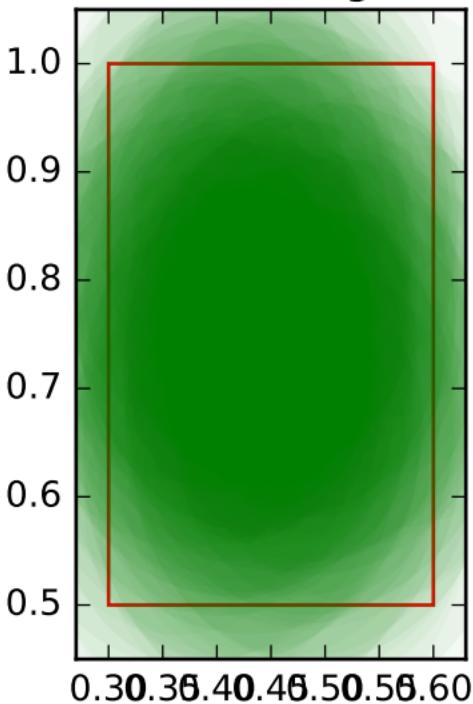

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_1, variable
name: rotation sibling order: 4

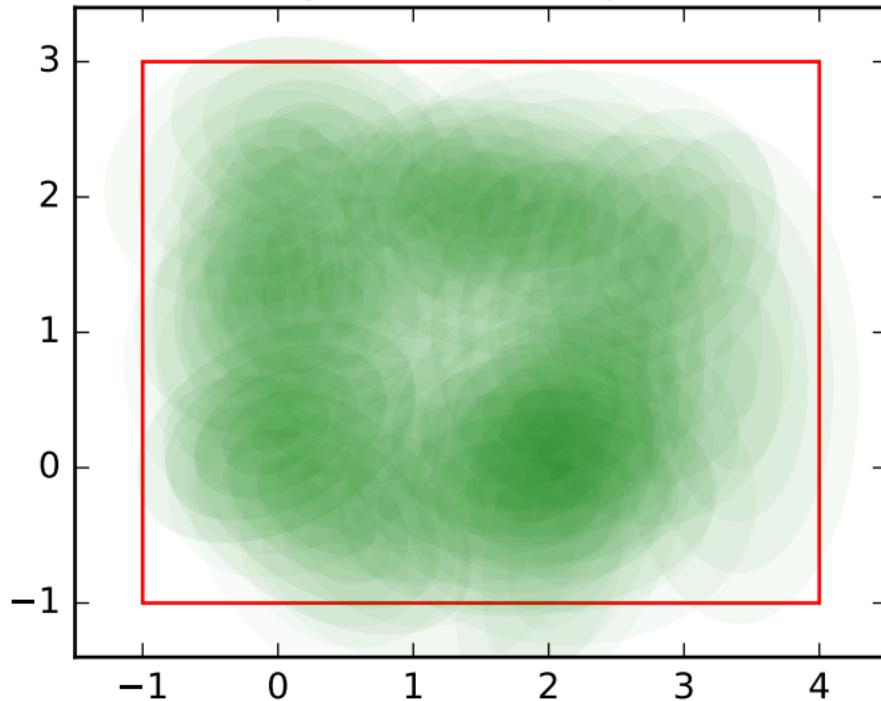

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: size sibling order: 0

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: position sibling order: 0

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: size sibling order: 1

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: position sibling order: 1

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: size sibling order: 2

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: position sibling order: 2

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: size sibling order: 3

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable name: position sibling order: 3

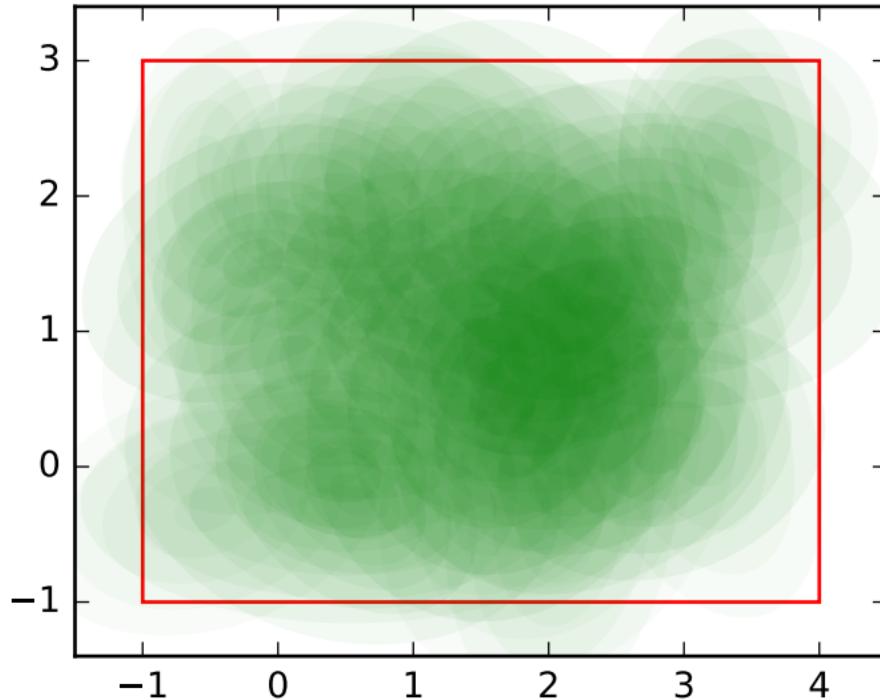

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: size sibling order: 4

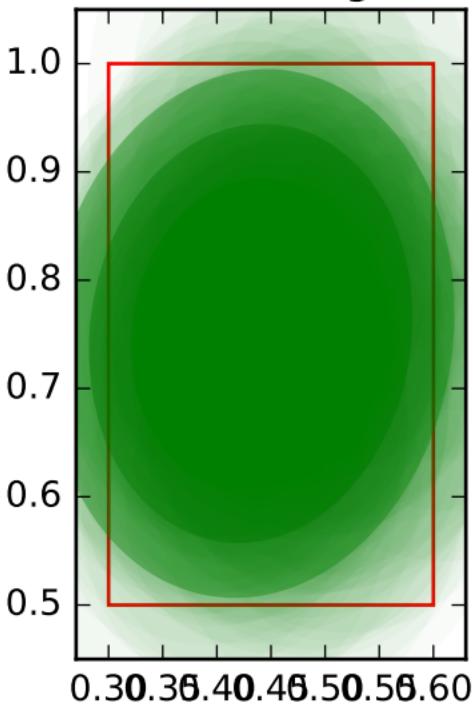

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_3, variable
name: position sibling order: 4

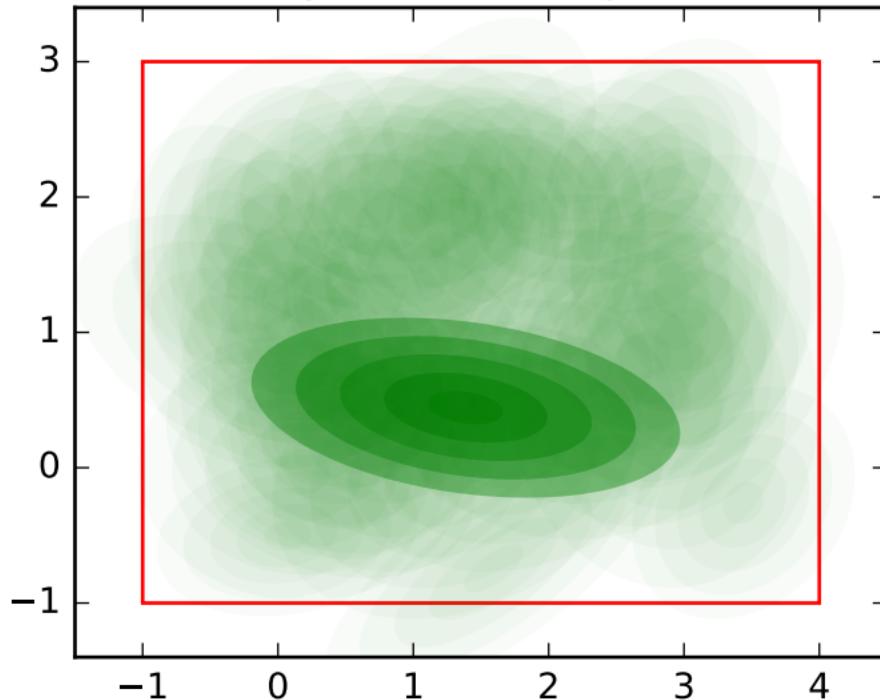

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: size sibling order: 0

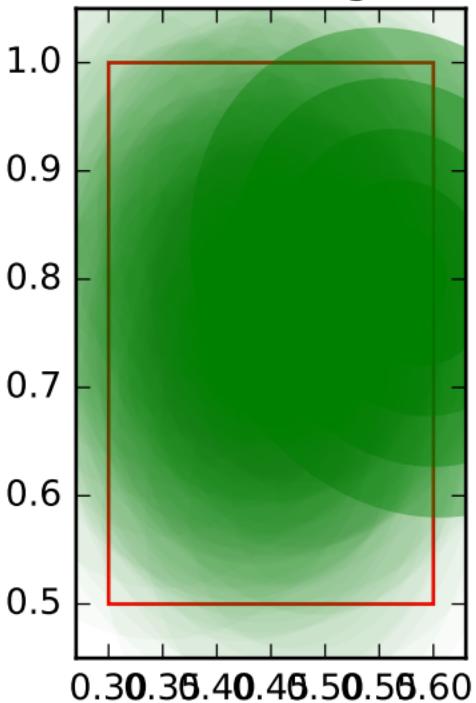

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: position sibling order: 0

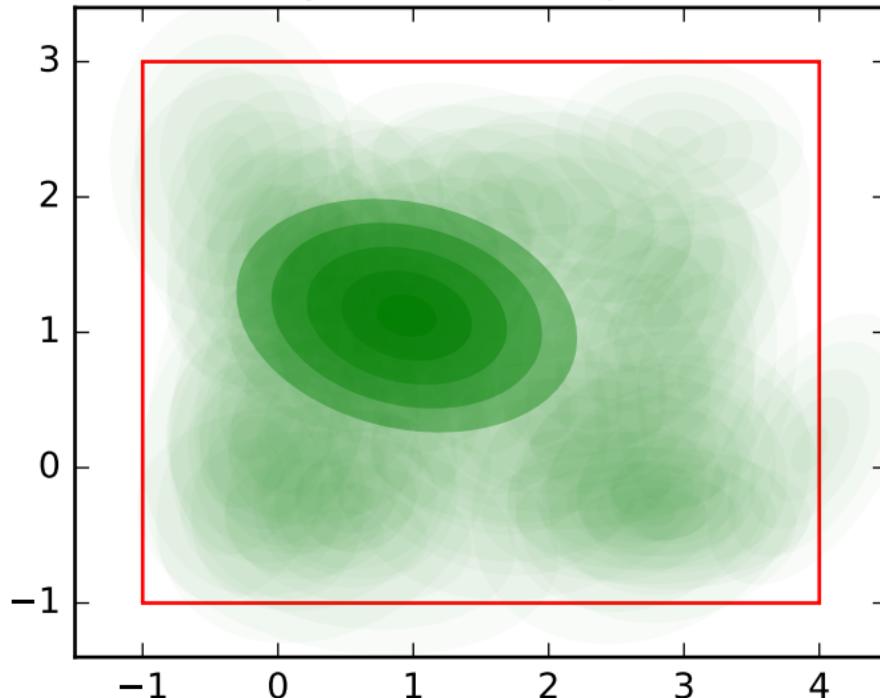

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: size sibling order: 1

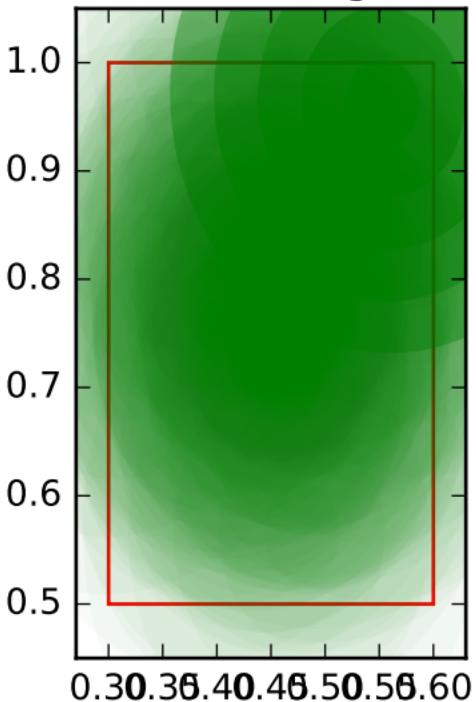

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: position sibling order: 1

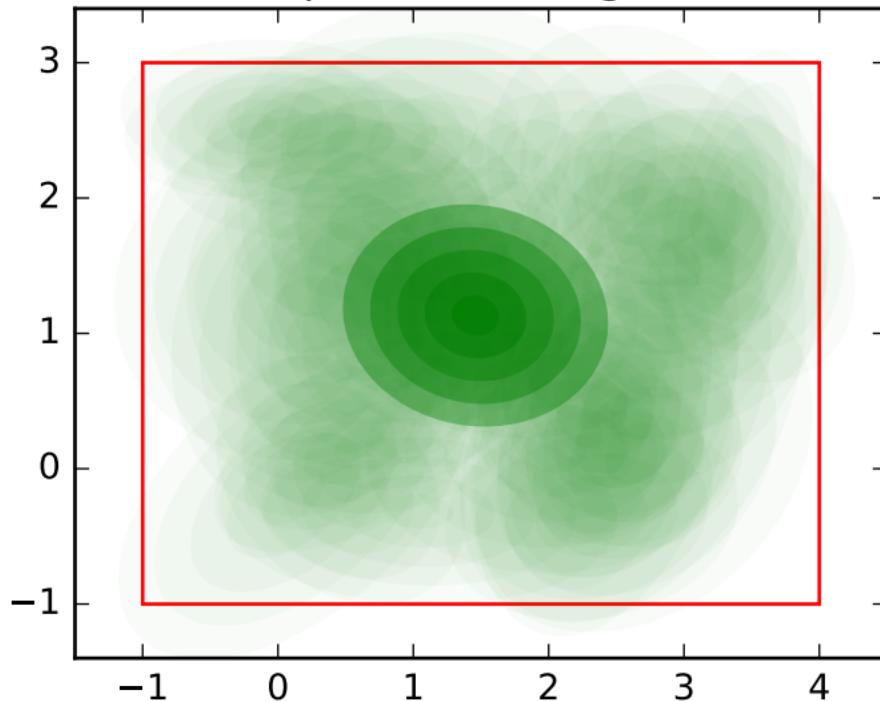

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: size sibling order: 2

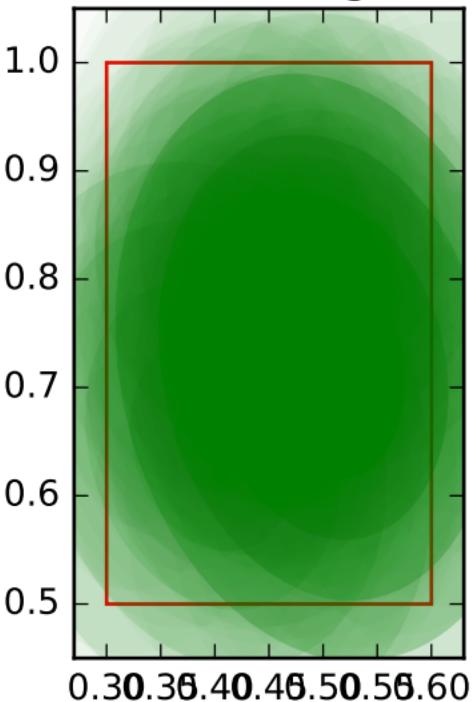

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: position sibling order: 2

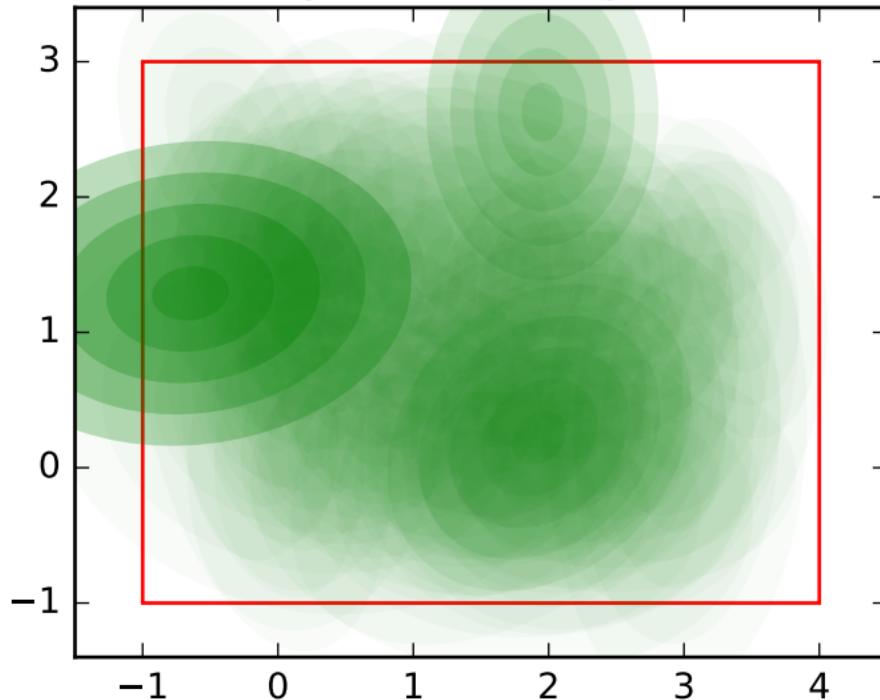

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: size sibling order: 3

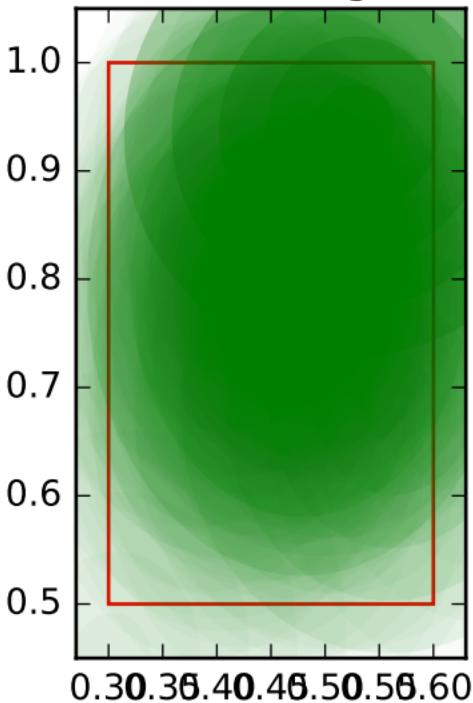

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: position sibling order: 3

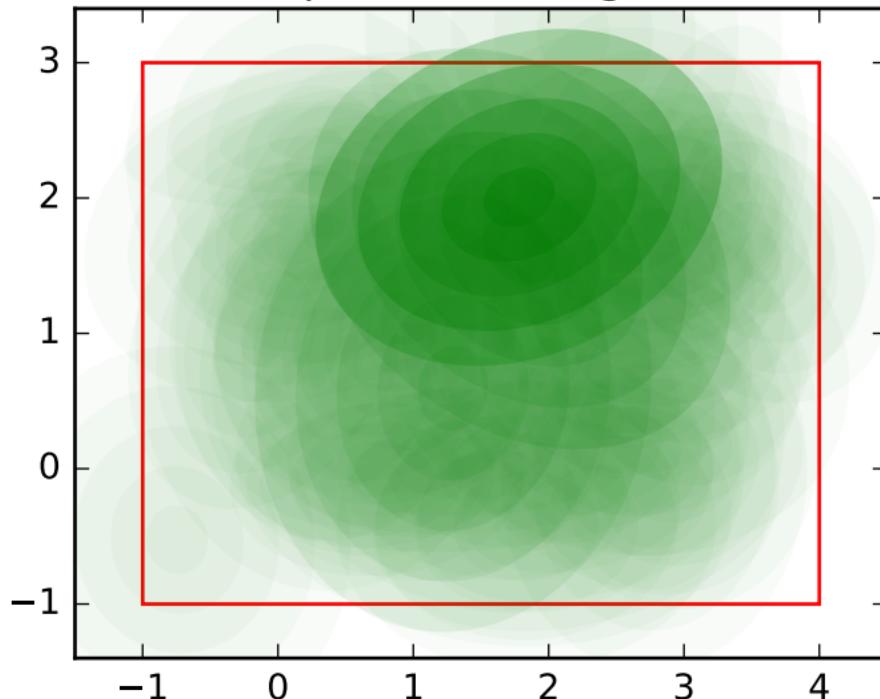

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable
name: size sibling order: 4

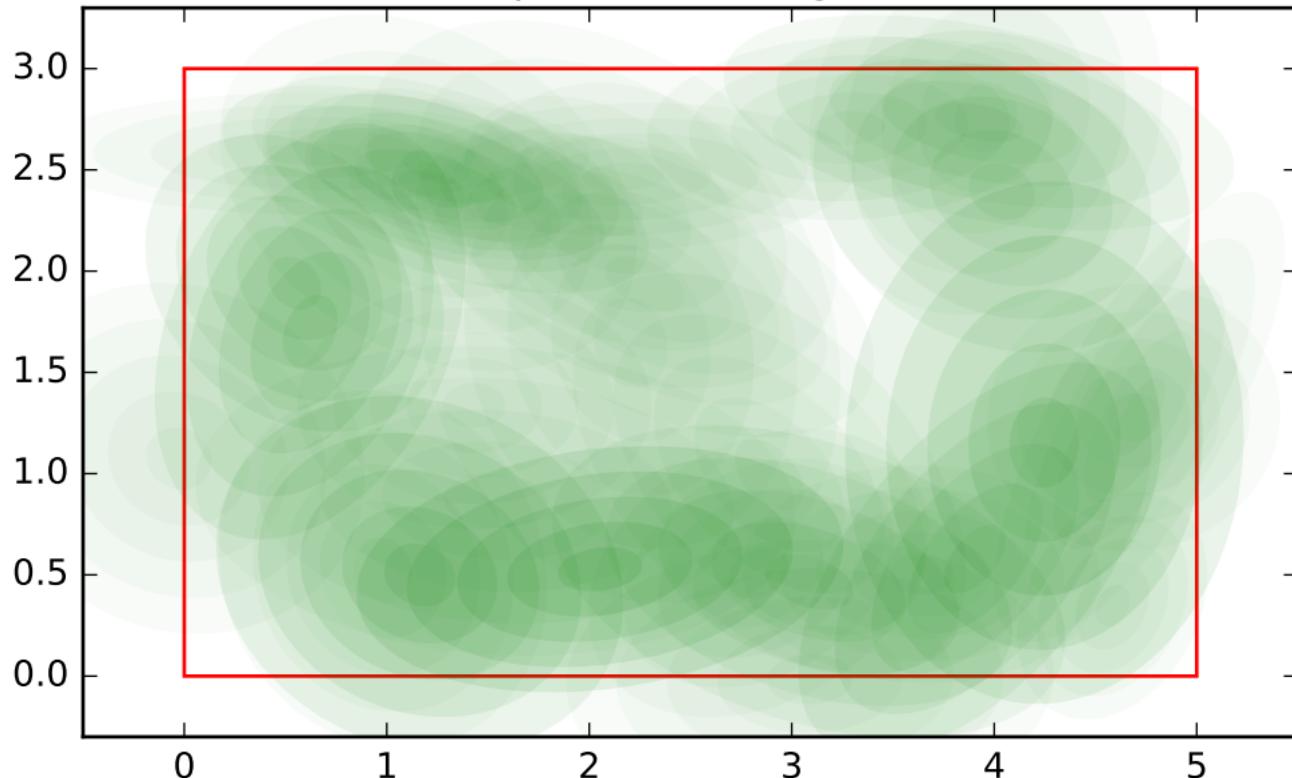

test for regression condition, model fitness target distance

regression with condition: 1.1 ,training_model_4, variable name: position sibling order: 4

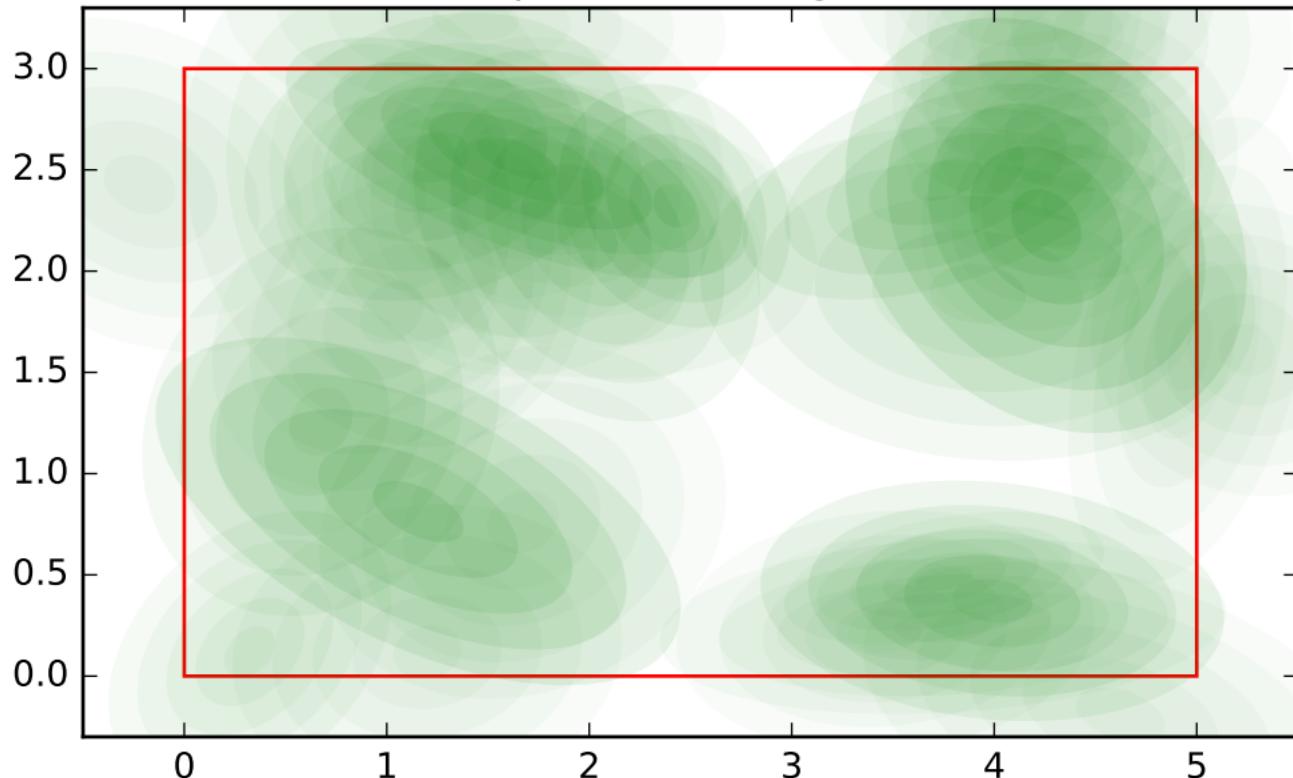

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_0, variable
name: position sibling order: 0

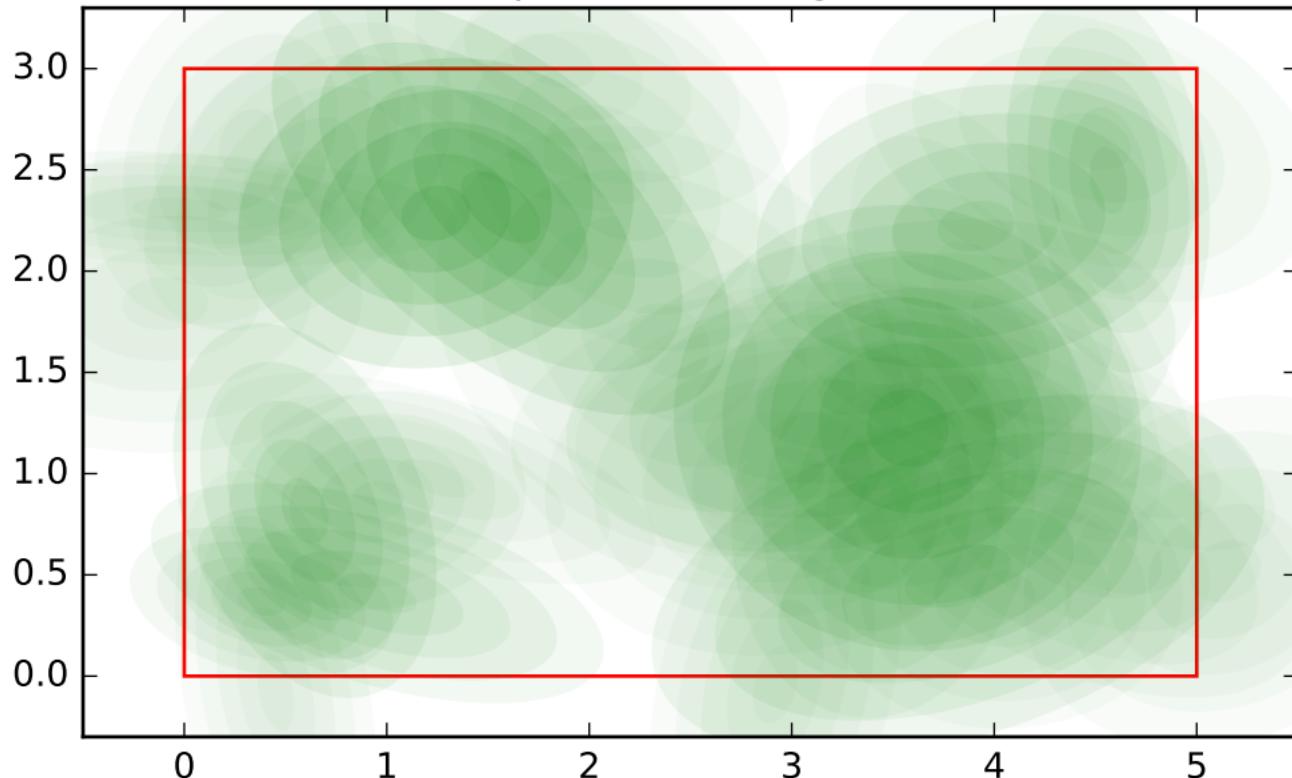

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_0, variable
name: position sibling order: 1

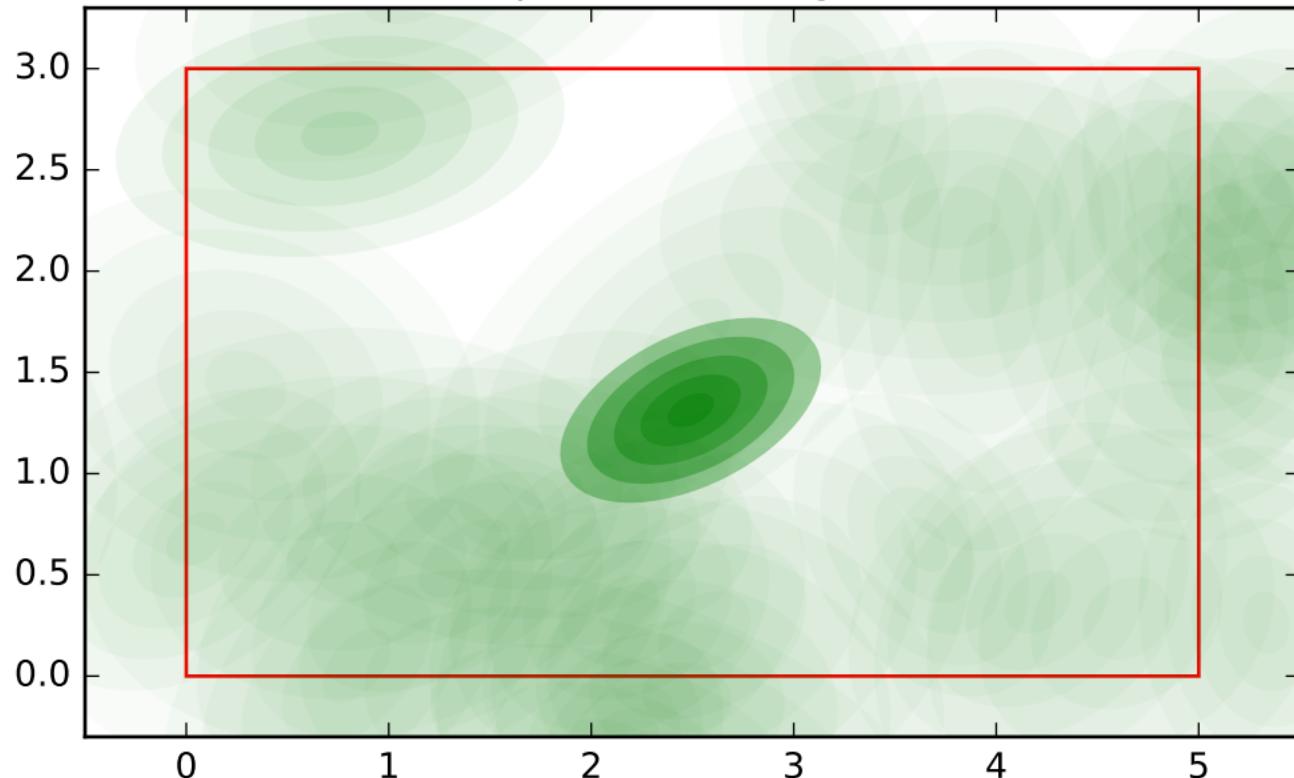

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_0, variable
name: position sibling order: 2

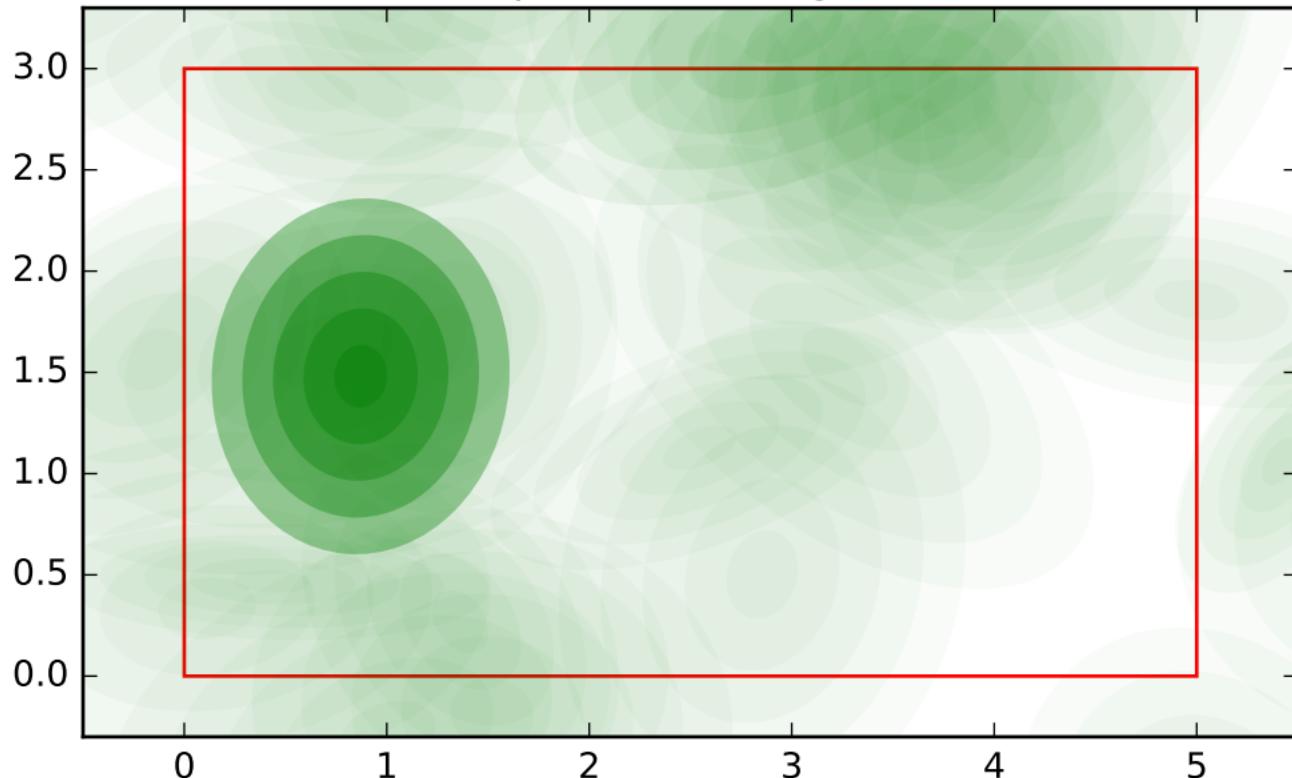

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_0, variable
name: position sibling order: 3

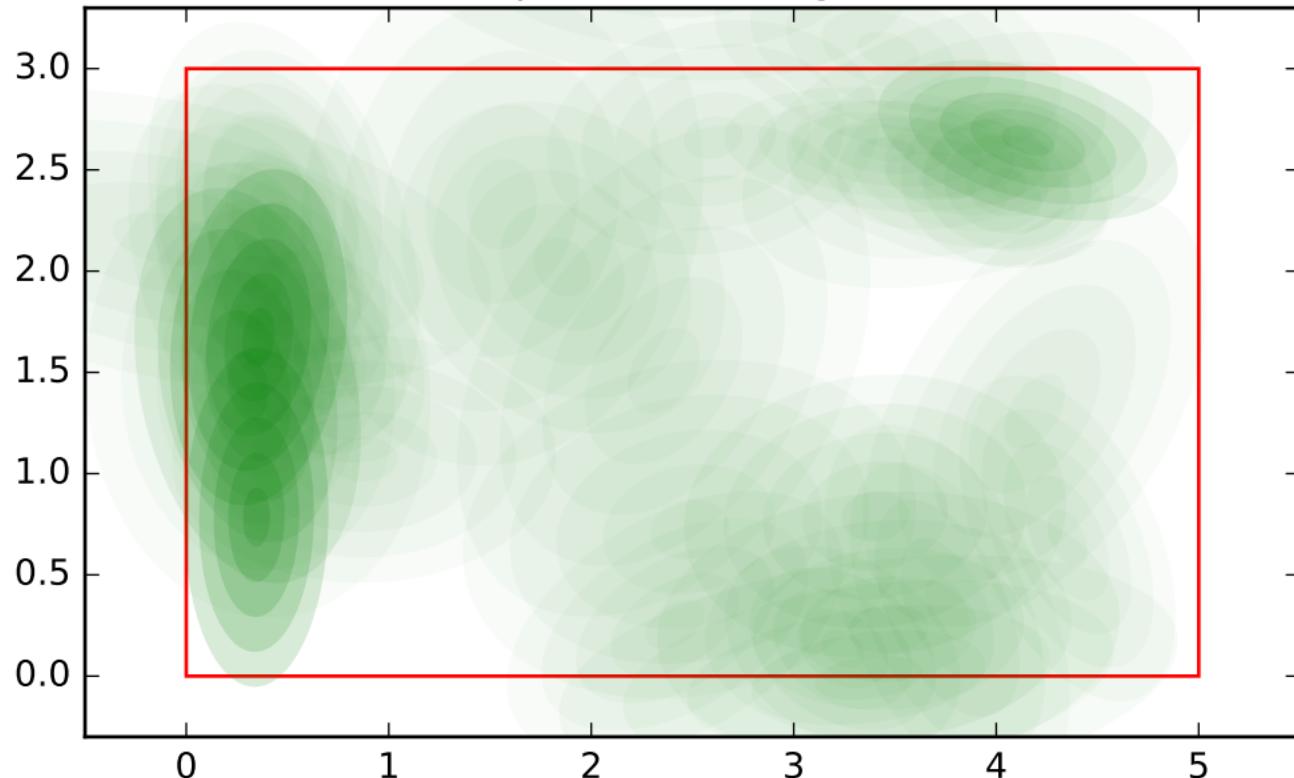

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_0, variable
name: position sibling order: 4

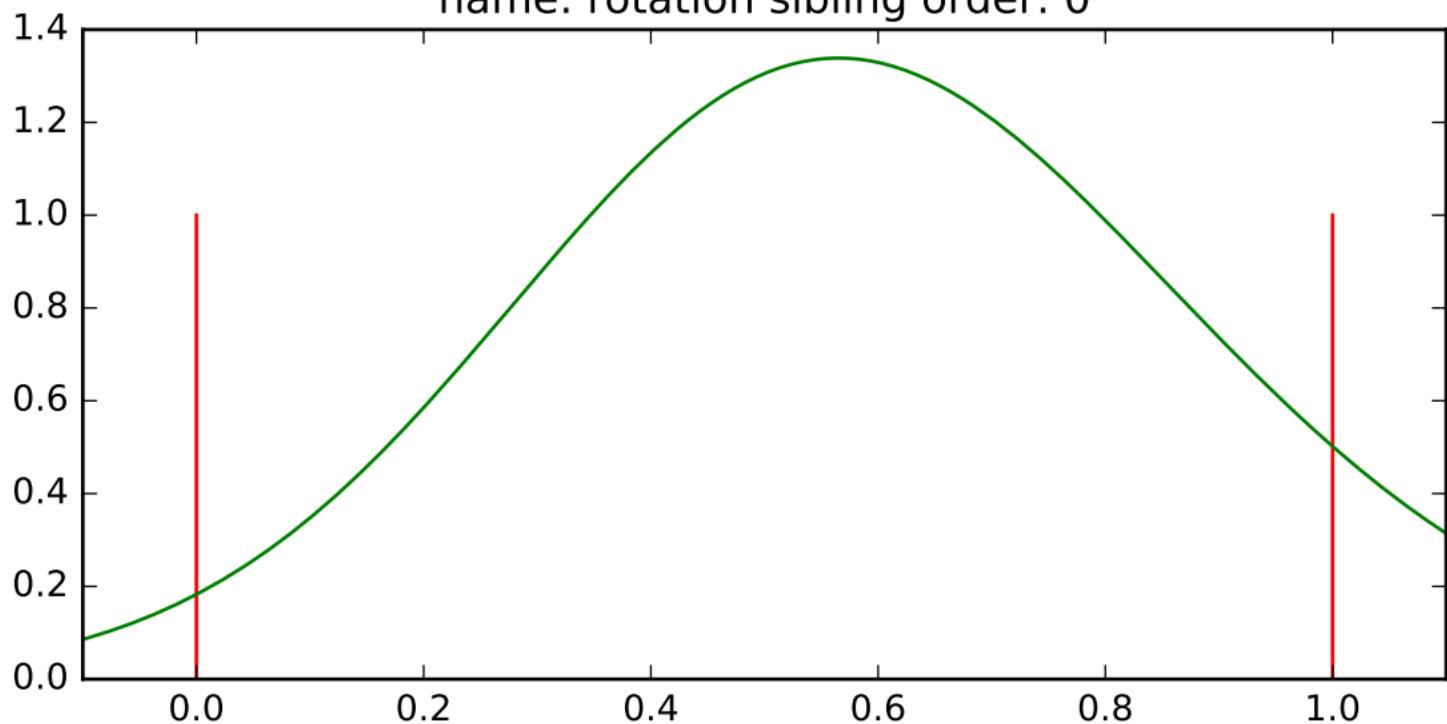

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: position sibling order: 0

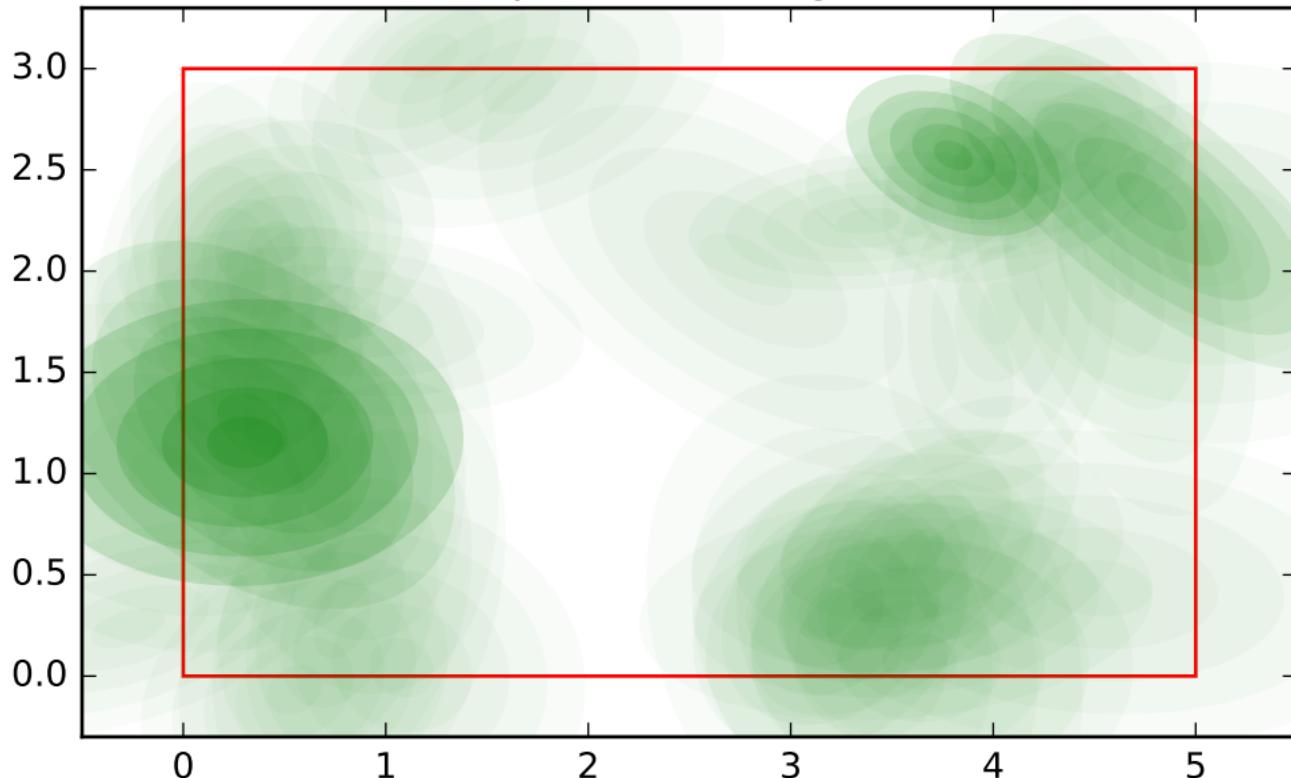

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: rotation sibling order: 0

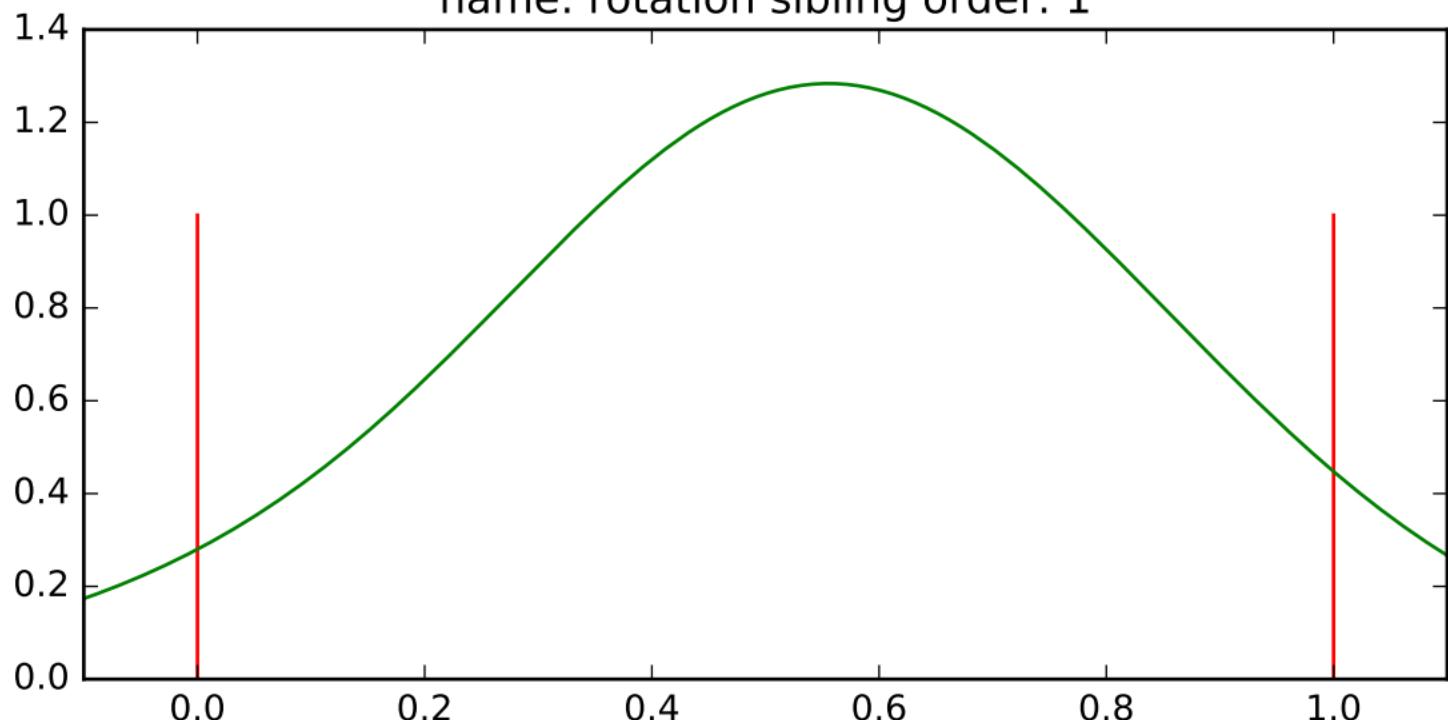

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: position sibling order: 1

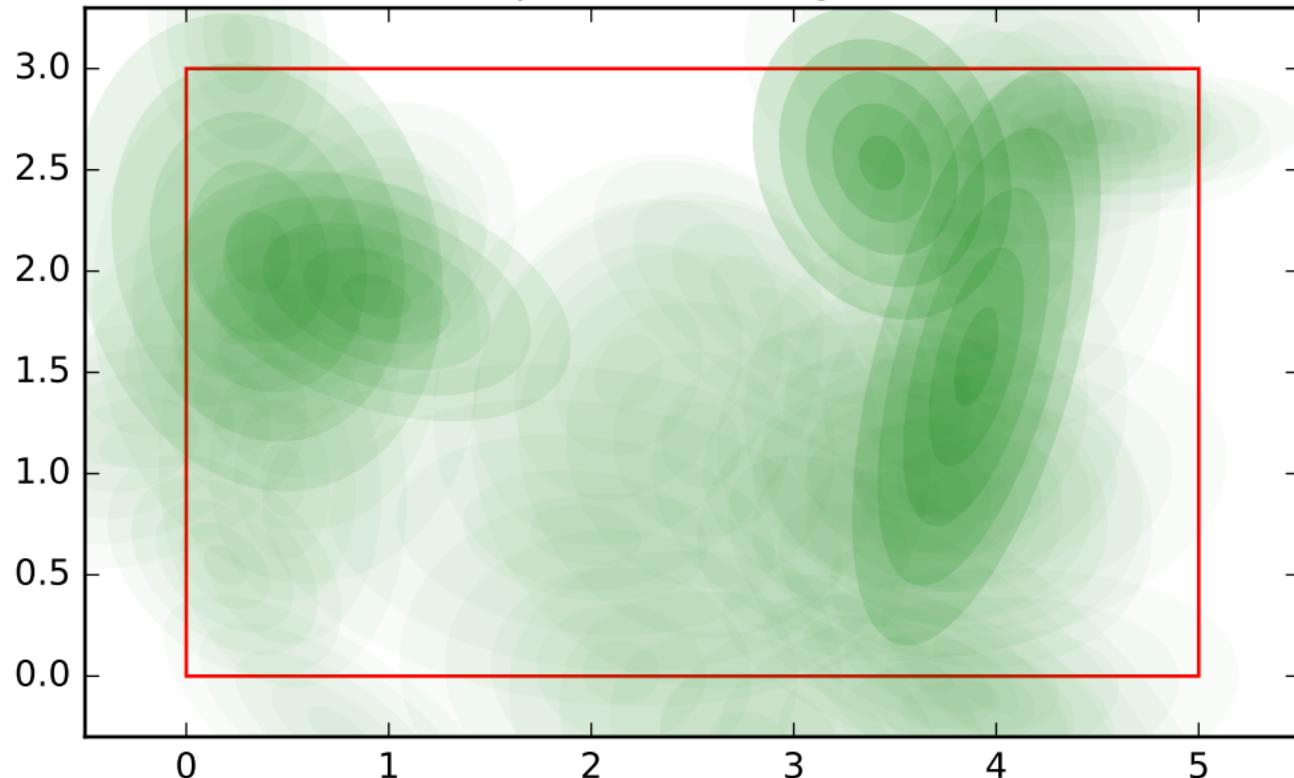

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: rotation sibling order: 1

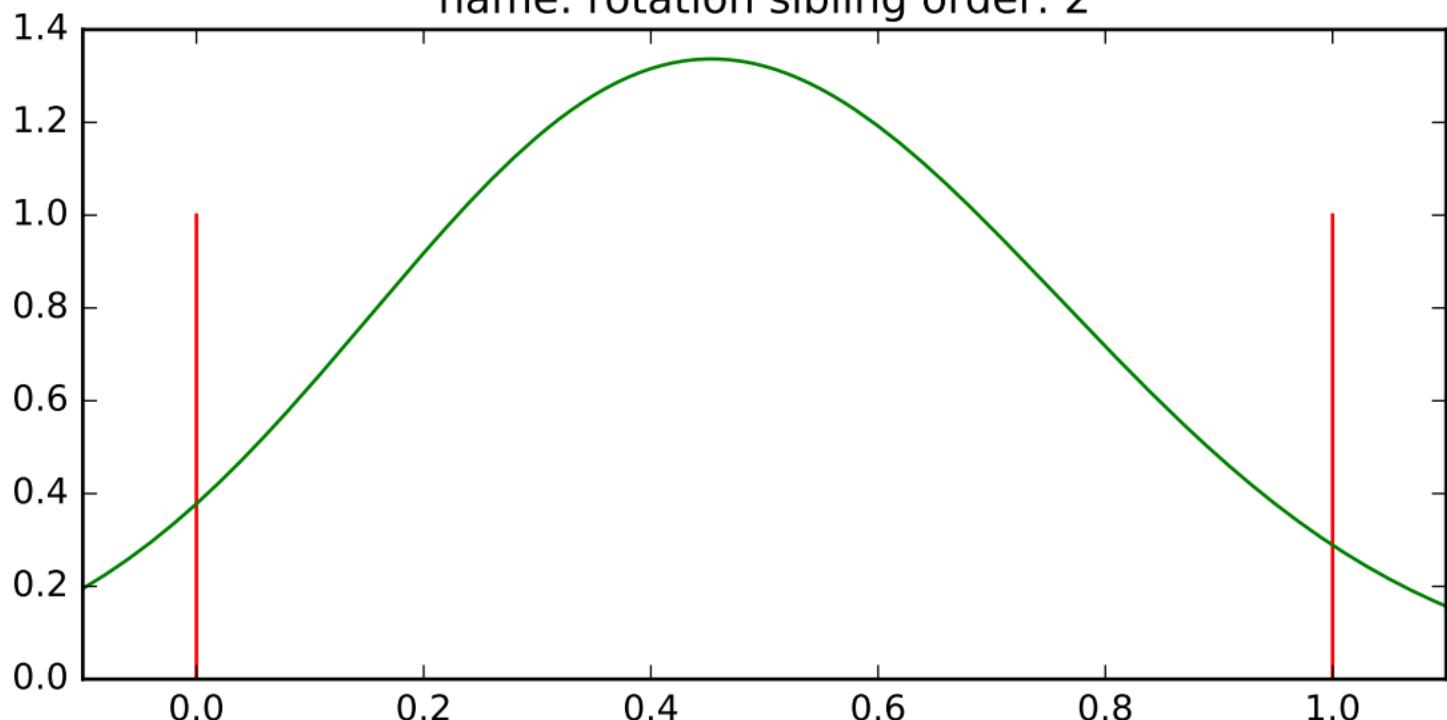

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: position sibling order: 2

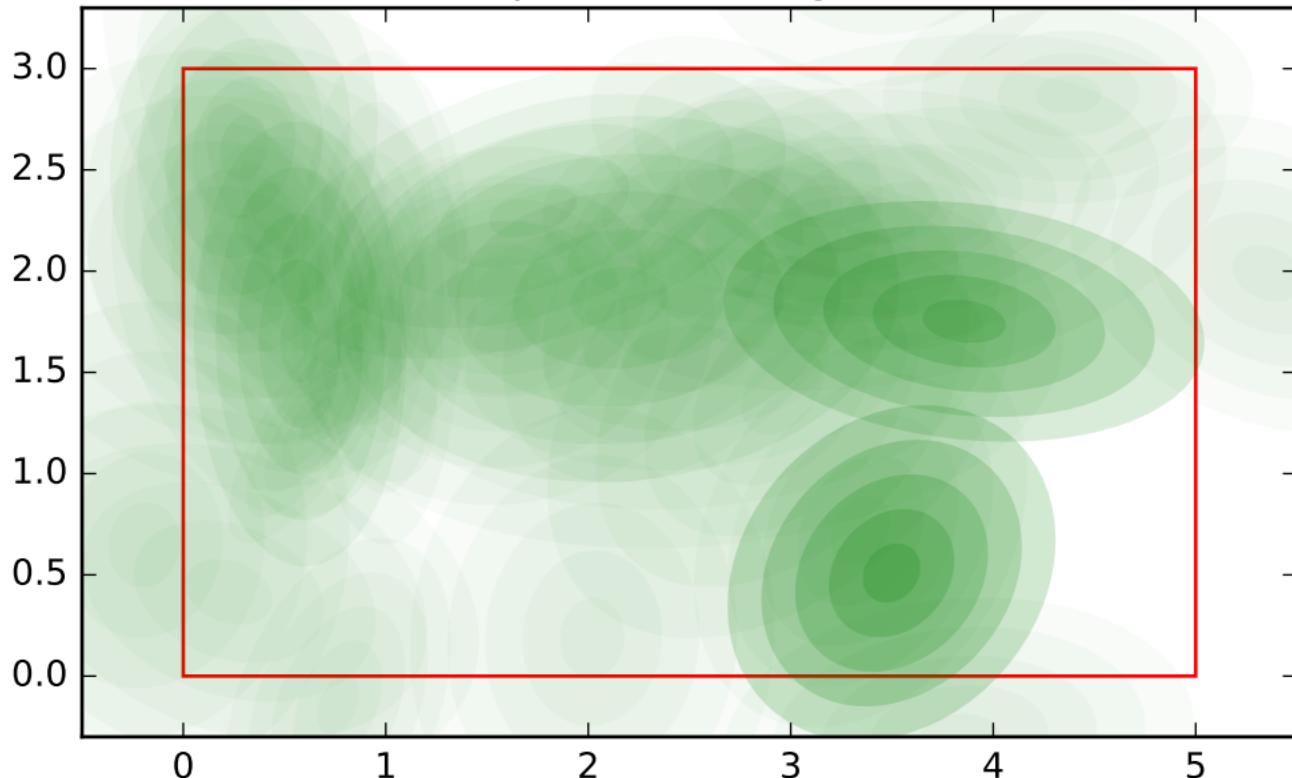

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: rotation sibling order: 2

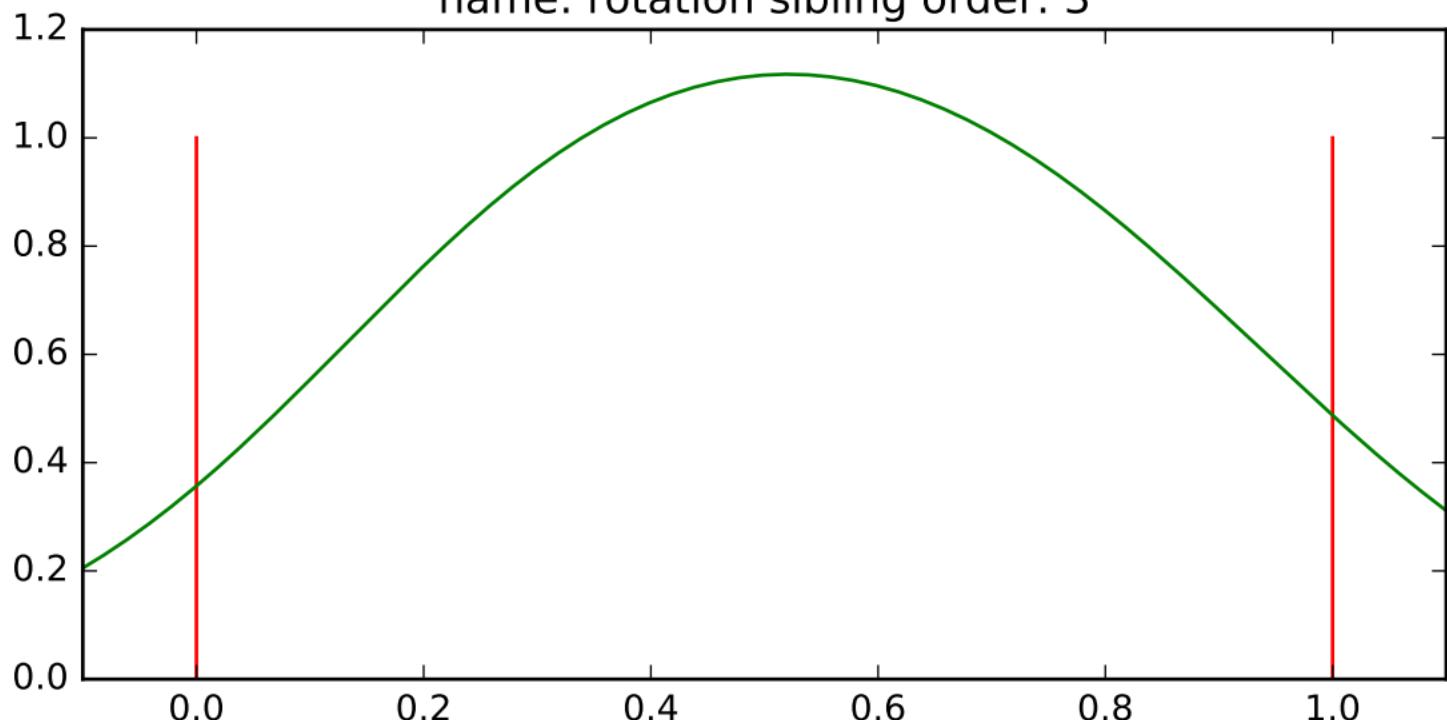

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: position sibling order: 3

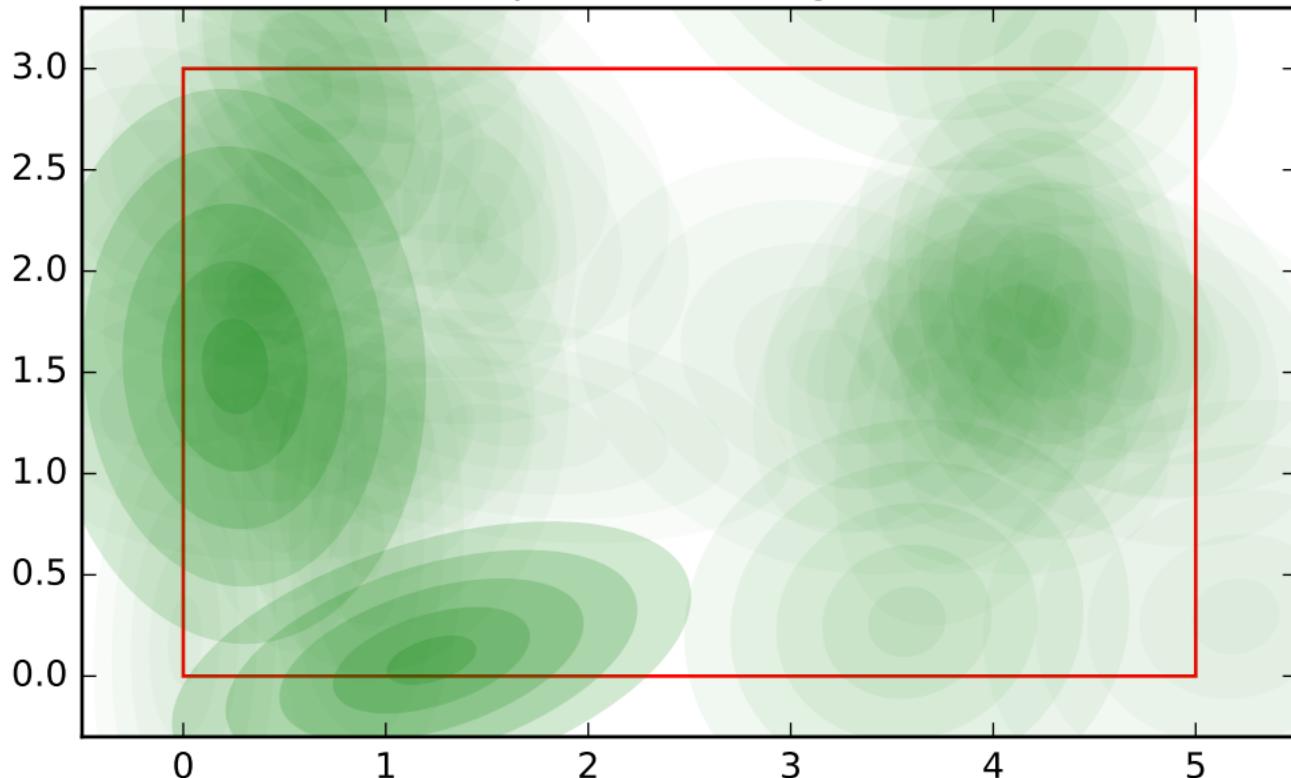

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: rotation sibling order: 3

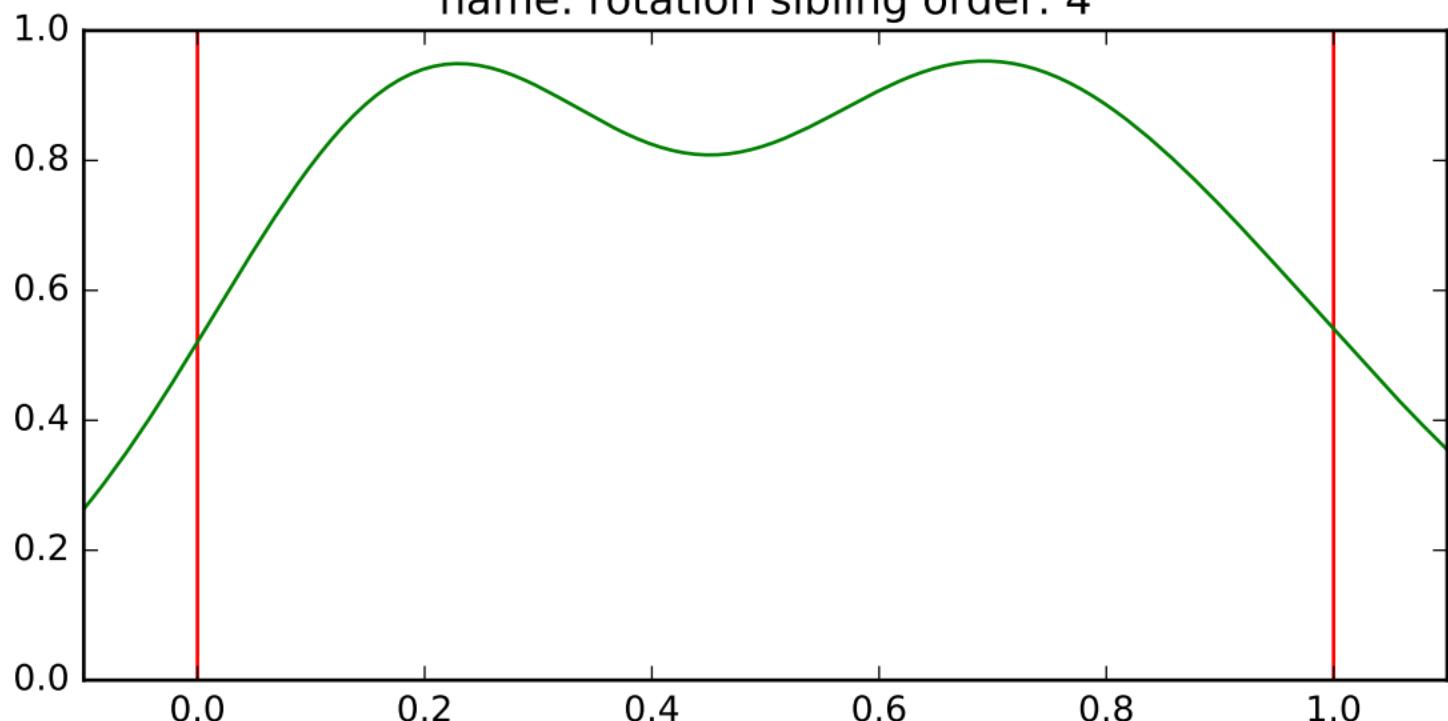

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: position sibling order: 4

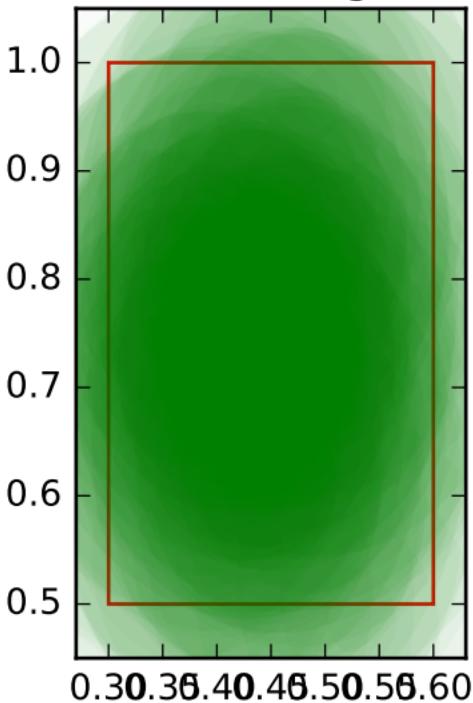

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_1, variable
name: rotation sibling order: 4

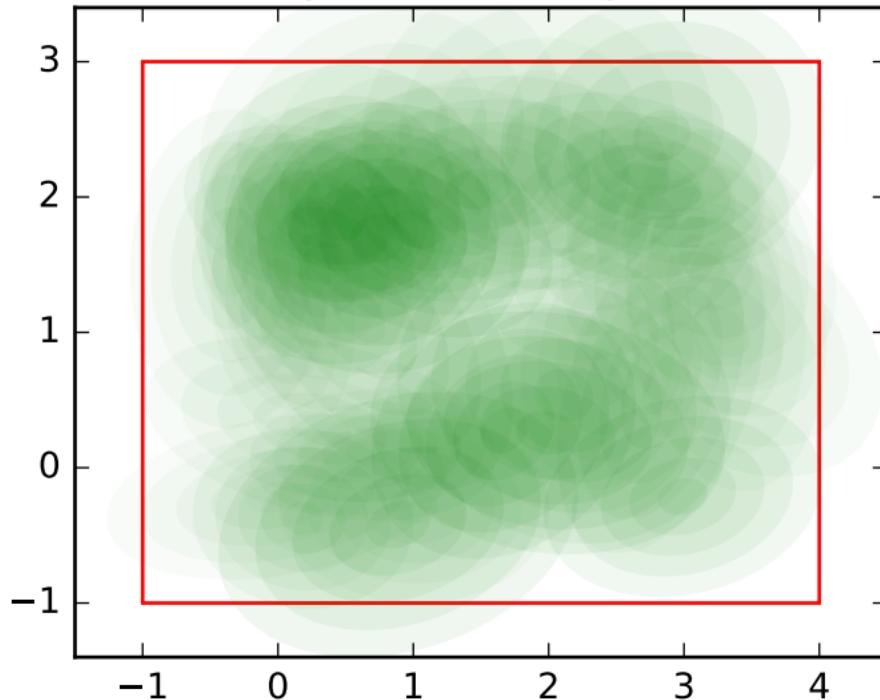

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: size sibling order: 0

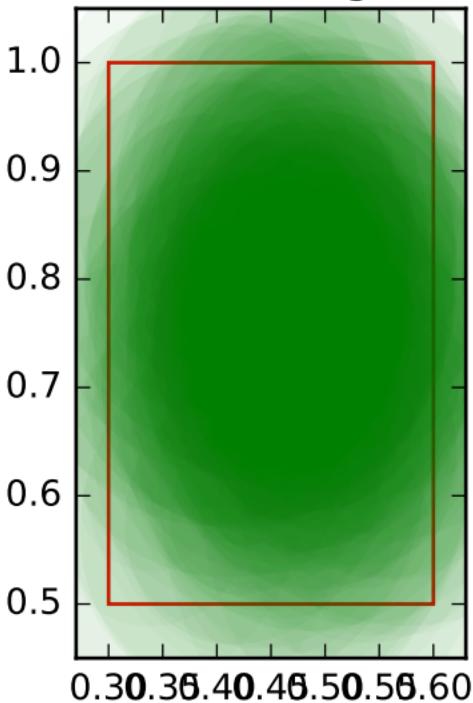

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: position sibling order: 0

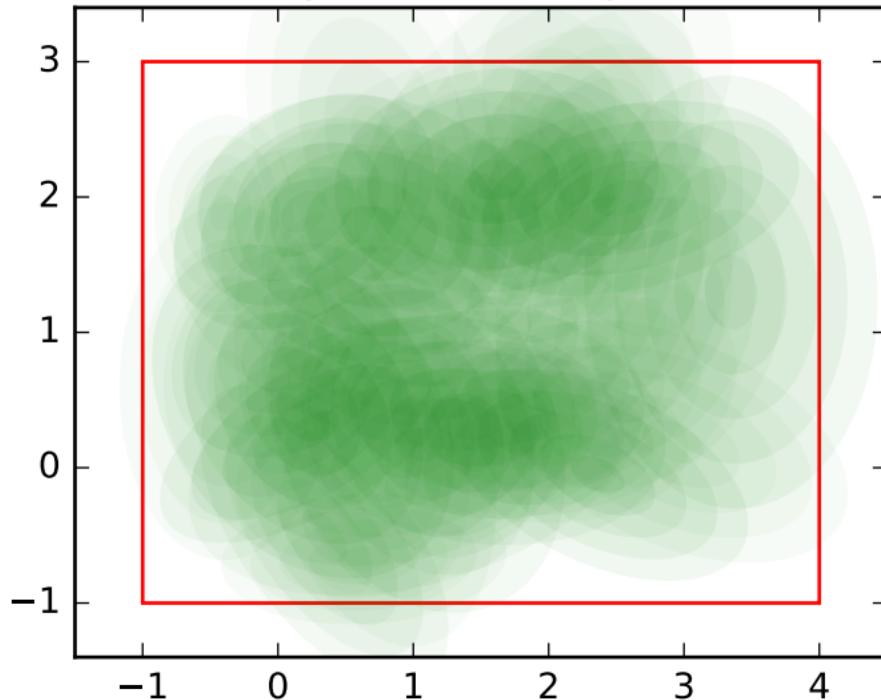

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: size sibling order: 1

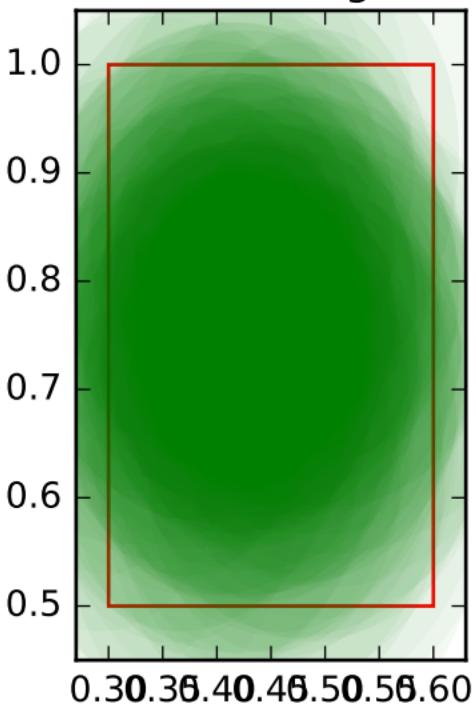

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: position sibling order: 1

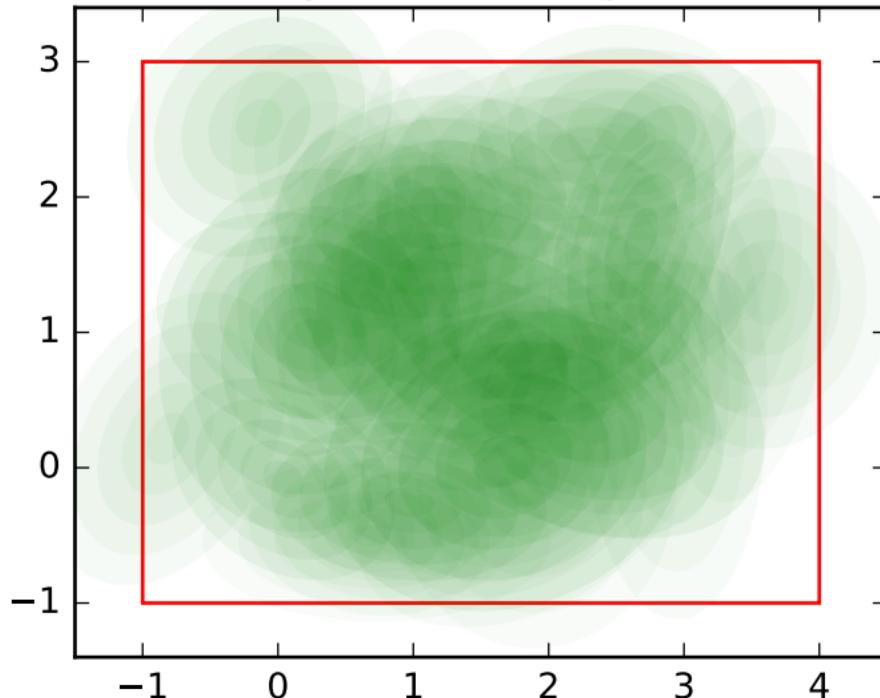

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: size sibling order: 2

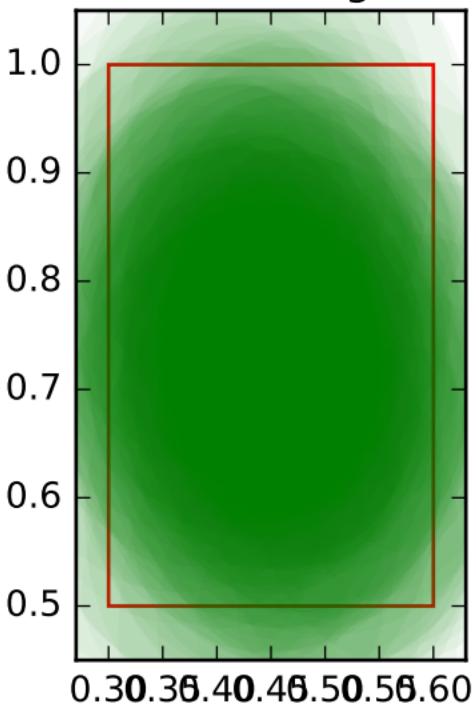

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: position sibling order: 2

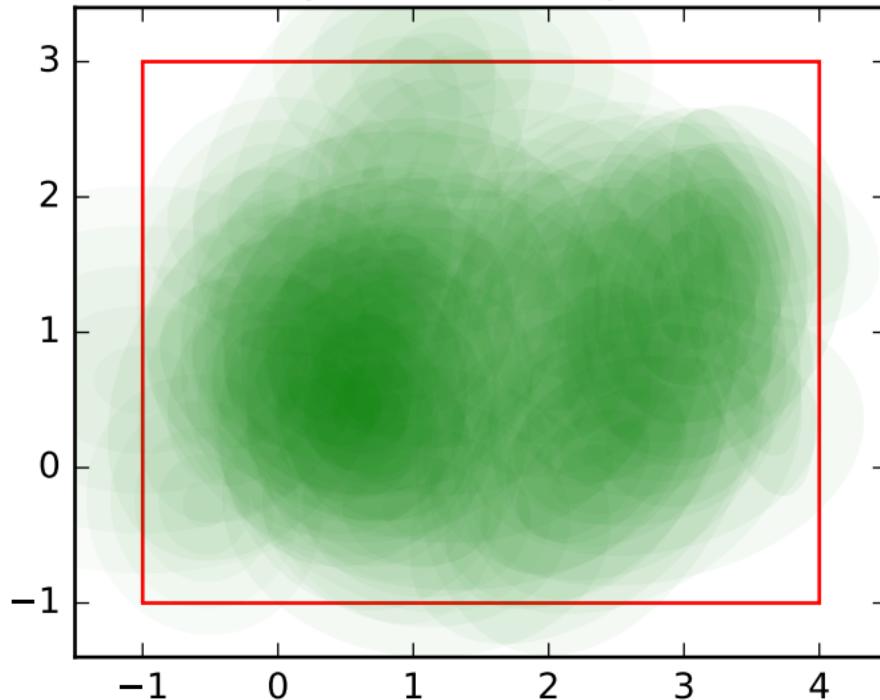

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable name: size sibling order: 3

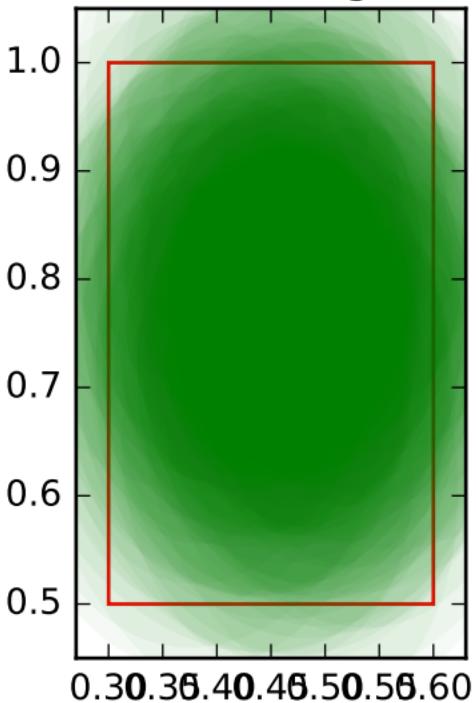

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: position sibling order: 3

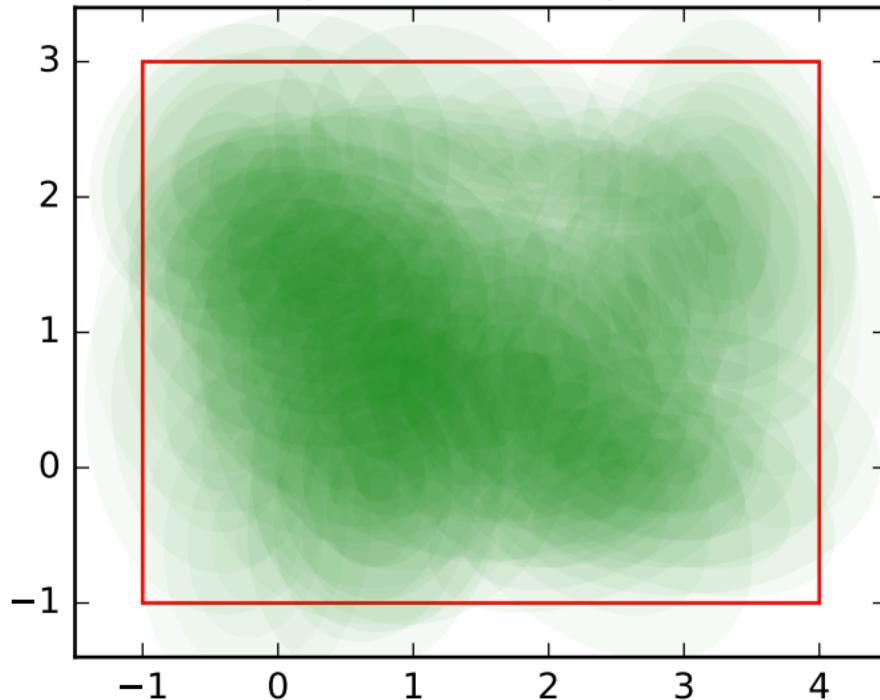

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: size sibling order: 4

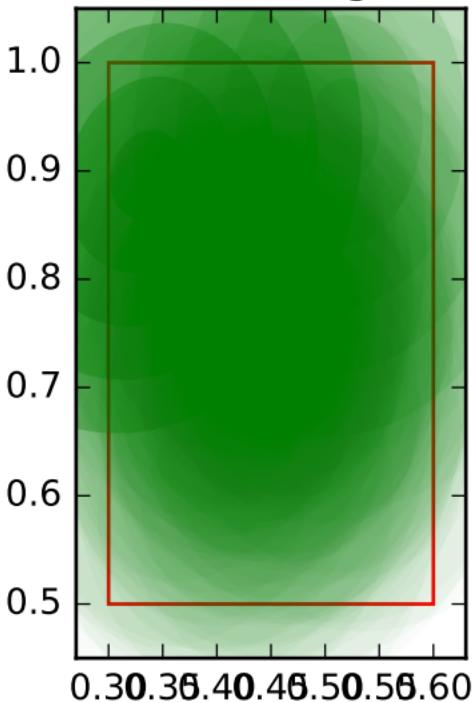

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_3, variable
name: position sibling order: 4

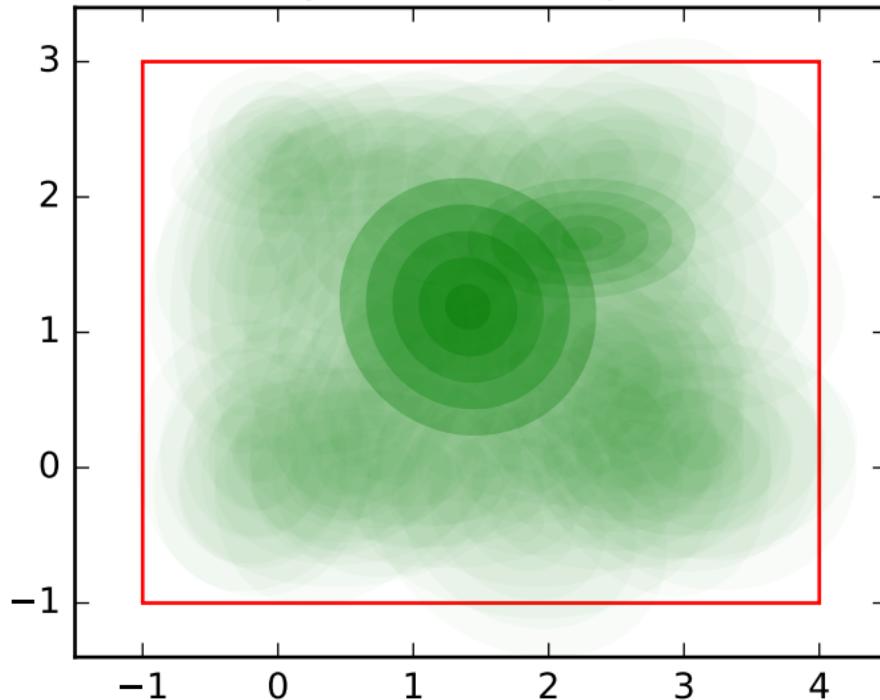

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: size sibling order: 0

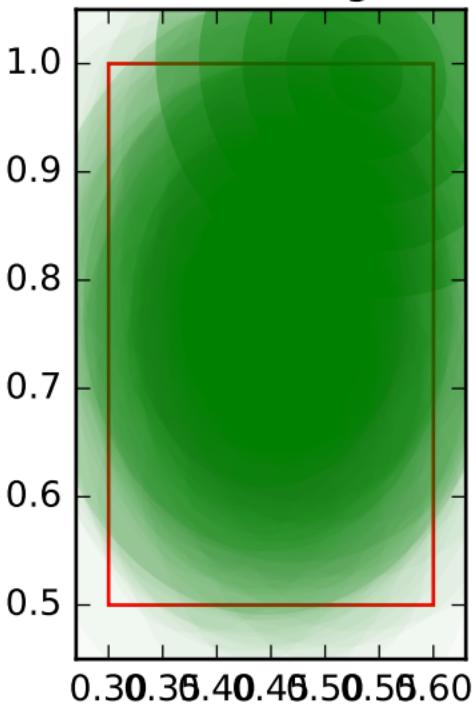

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: position sibling order: 0

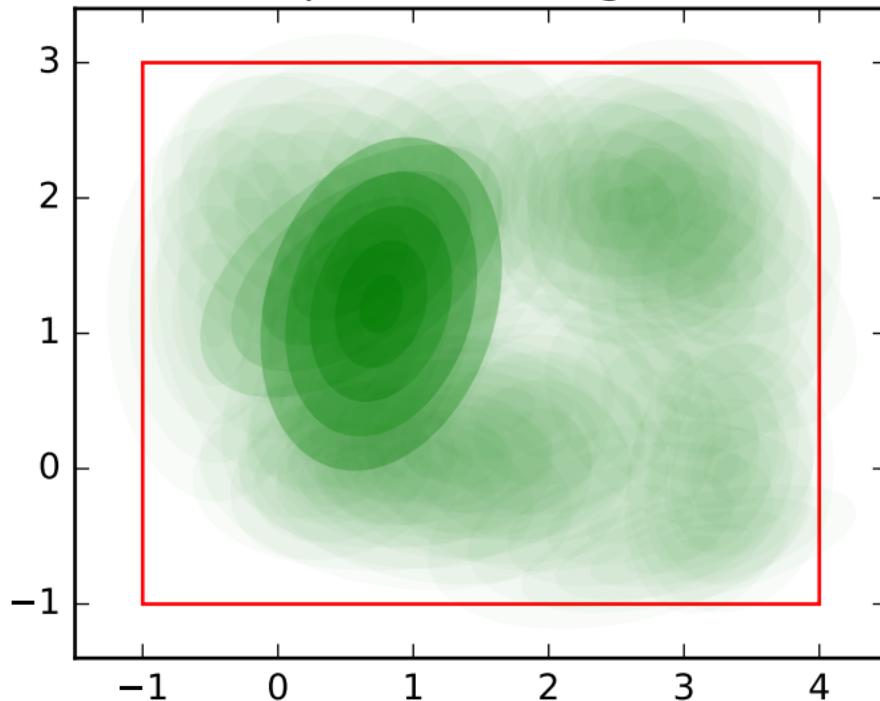

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: size sibling order: 1

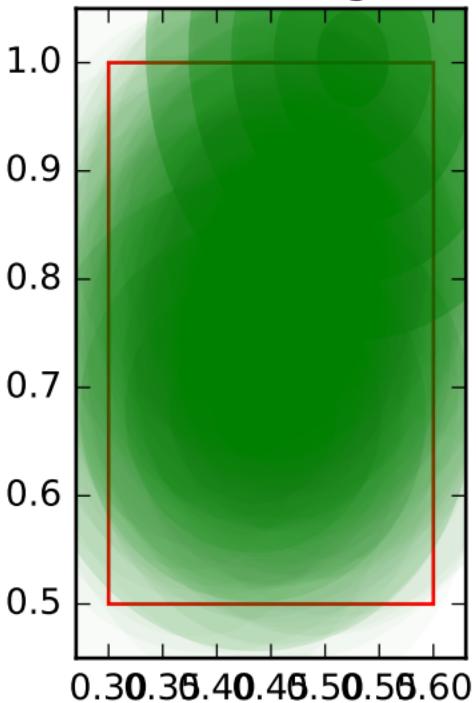

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: position sibling order: 1

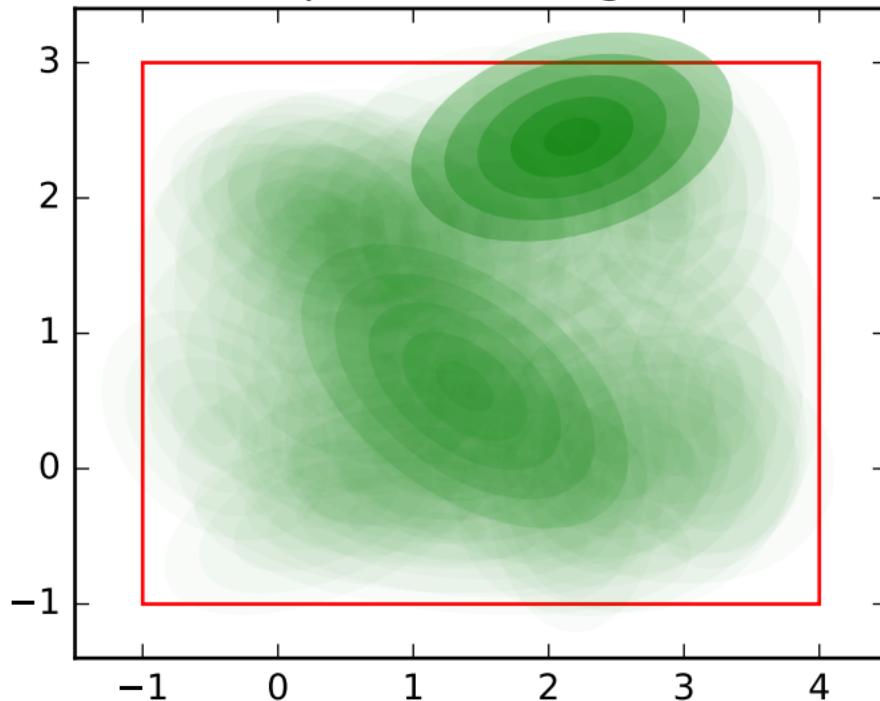

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: size sibling order: 2

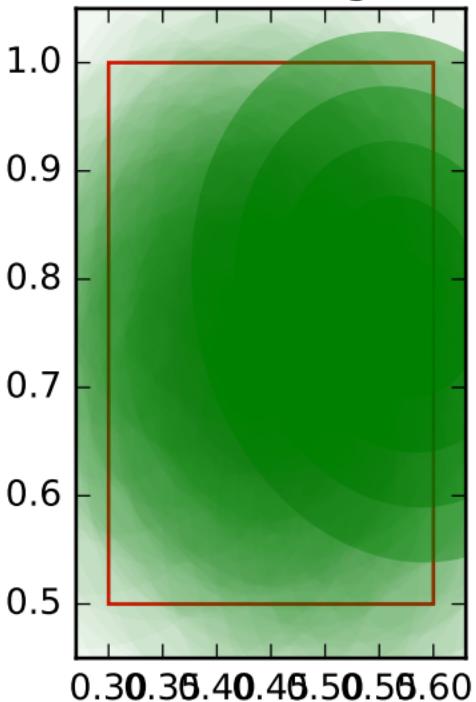

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: position sibling order: 2

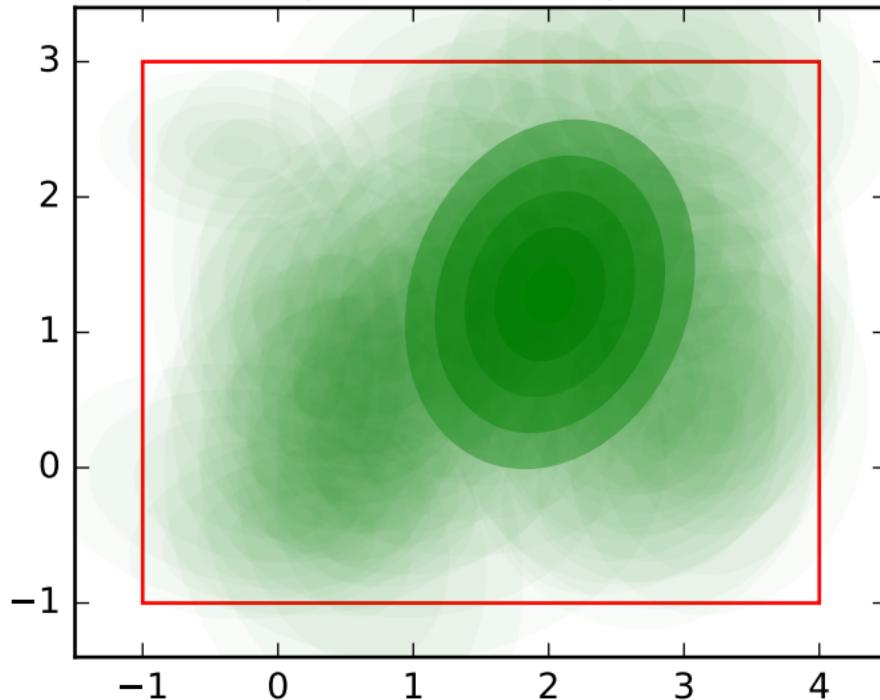

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: size sibling order: 3

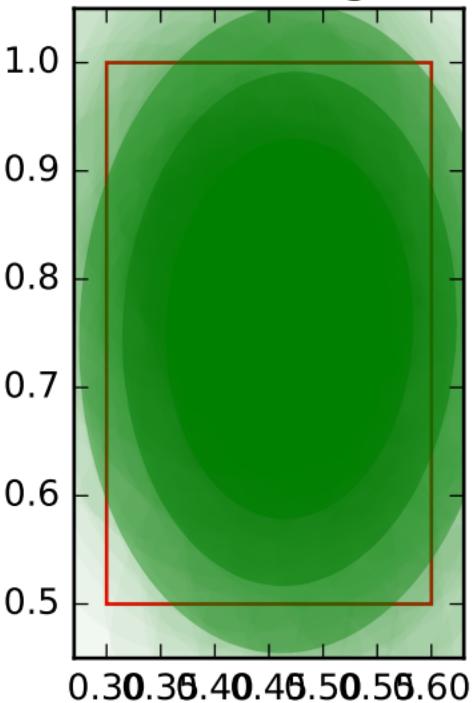

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: position sibling order: 3

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: size sibling order: 4

test for regression condition, model fitness target distance

regression with condition: 1.2 ,training_model_4, variable
name: position sibling order: 4
